That really depends on the type of EAS equipment you are using. As far as the Sage, which I use here in Georgia, it is quite simple. You have to go into your config and tell it what you want to automatically rebroadcast. I have my automatic rebroadcast for the RMT only. I make the announcers manually do the RWT. I also have the important warnings and watches on auto.

I guess it's a bit late to worry about it, but... The Win 3.11 machine
that keeps my ham station's log rolled over to "01-01-00". Really not a
big deal as the application uses two-digit years too. (yeah, I can't
search for "all contacts made between 12-20-1999 and 01-15-2000"..)

However, the application reads that date as "01-01-10"! Weird. Oh
well, the date read from the system can be manually overtyped.
==========
======

They had us at work too. Mostly, to fill out Y2K paperwork to be faxed
to corporate HQ.

We had one piece of broken Java on our Web page, which caused the date
to display as "100" somewhere. I didn't see it. Also noted a couple of
pieces of weather wire data that said it was transmitted on January 2!

Did anyone else get the "how to tell if your computer is Y2K compliant
and what to do if it isn't" that crossed the AP wire at 11:13pm CST?

3. Y2K: Media Hype at it's Worst

Newsgroup: rec.radio.broadcasting
Date: 2000-01-01 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <20000101115332.14514.00000630@nso-cg.aol.com>
Source record: 21559

Gee, I guess I can come out of my underground bunker now.

Big winners in the Y2K "crisis" that never was: the news media, portable generator retailers, fear-mongers, and all the various "protect yourself from Y2K" scam artists.

Losers: doomsday wackos and ordinary citizens who turned on their televisions, opened their wallets, and fell for the hype.

As expected, the news media milked this non-event for all it's worth. Gotta get those all-important Nielsen/Arbitron points and advertising $$$$, you know.

Question: what will now happen when a REAL emergency presents itself? A childhood fable entitled "The Boy Who Cried Wolf" comes to mind here...

As I said over in another newsgroup. . .someone's going to be wolfing down
a lot of creamed chipped beef on toast this year. Maybe until August. . .

So what else is new?

(On the other hand, stocking up for an emergency is not a bad idea--we still
will have hurricanes and earthquakes in such. Maybe all that stash will come
in handy then.)

Source record: 21563

Is it just me or is the G Gordon Liddy show losing a lot of affiliates? Here in Cincinnati I used to get his show out of Dayton, Louisville and Lexington, and I knew that he used to be on in Indianapolis and Columbus as well. As of last Thursday, he lost his last regional affiliate in Cincinnati. I know that he's been added to several large markets, but those are mostly Infinity stations carrying Westwood One properties. How much longer will the G-Man be carried by Westwood one. That's one syndicator that is fairly quick to pull the trigger on shows that are not working out. Or are these losses just part of a trend away from political talk?

IMO, this has got to be the most incredibly hyped non-event ever. I would love to see a mass backlash that results in the media generally re-evaluting their responsibility and stop making all these "we will tell you what hasn't happened yet" stories.

I have been called an incurable dreamer.

Although I work at a major national news network, I agree with what you
are saying.

But, IMPHO, I must also say that there was an awareness that was out
there as well that did get a lot of folks to wake up and take care of
what could easily have become disastrous. Fortunately, as of this time,
there are few known problems.

Yes, there was hype, ratings, and money made and lost, but overall and
on balance, I appreciate the outcome.

Just my 2-cents worth.

Regards,
Howard

The truth is, there were a lot of industries that did a lot of Y2K
remediation work that helped to MAKE this New Year's a non-event. The
media deserves *some* of the credit for that, although they did definitely
overhype the event.

Drew,
You make a good point or two...but...
The news media did not raise this issue, the computer industry did. Reporters are too dumb to have inquired about such a problem originally. (don't ever give them that much credit!)
With thousands of business and government leaders spending hundreds of BILLIONS of dollars on Y2K protection AND with millions of people working New Year's Eve "just in case", it seems to me the coverage was fairly appropriate.

I liked the big ABC 2000 program precisely because it did not highlight a problem that wasn't. It was a very entertaining program showing people celebrating the new year around the world. The sight, sounds, and colorful cultural displays will be something I remember for a long time to come.

..well, there's certainly a gradual trend away from the ham-handed fascism of talkers like Liddy, Limbaugh and Bob Grant. That's been in evidence since the Oklahoma City bombing proved what hate talk, and Chuck Harder in particular, were capable of inspiring in people like Terry Nichols. But I hesitate to say there's been a trend away from political talk per se; Laura Schlessinger, who's really more politic than psych, certainly has yet to peak, and check liberal Mike Malloy's numbers on WLS Chicago...

..nor would I say Westwood One is particularly cancellation-happy. Remember, they kept Tom Leykis on through a period when he couldn't even be heard in Los Angeles, where his show is based. And Liddy himself has always been incapable of generating stellar ratings in Washington itelf; there's always been a massive drop in the hours between Stern and Don & Mike on WJFK...

..perhaps Liddy has photos of Mel Karmazin in a comprimising position?...

13. THE VALUE OF ORCHESTRATING THE NEWS

Newsgroup: rec.radio.broadcasting
Date: 2000-01-02 00:00:00 UTC
From: brian connolly <clast@interaccess.com>
Message-ID: <s6vb20s15k2115@corp.supernews.com>
Source record: 21569

It is easy to forget about radio today, more so on New Year's Eve. It is especially easy to forget about radio when "Millennium Fever" has hit the television networks so hard. Which is what made Friday night so fascinating if you happened to be at Chicago's All-News Radio WBBM-AM 780.

"This is the sort of thing the staff lives for," Operations Manager Georgeann Herbert said, as the staff geared up for the night's coverage. "If the power goes out, very few people are going to be watching television. Frankly, it's part of our mission. The staff gets up for this."

Friday night had WBBM-AM preparing to do what it does best -- being there, in the event that everything else goes dark, to get the information to the battery-powered masses. The biggest challenge that faced the station was what to do if nothing bad happened.

Of course, midnight came and the power stayed on in Chicago. Nothing happened.

However, there is still something even more instantaneous about "nothing" breaking on the radio. But to pull it off that meant they had to be at the top of their game. That meant two months of planning and the operation more than fully staffed. There were three producers, five writers, eight anchors and 12 reporters on the street. In addition the station tried some different things, including a "round-robin" approach to give its coverage added urgency. Instead of anchors Kris Kridel and Steve Grzanich introducing individual reporters out on the street, each reporter ended a report by throwing it to another reporter. A small maneuver perhaps, but a strategic one. "You want to show immediacy," said Herbert.

Well, apparently nothing was a great success and WBBM-AM has proven to be at the top of its game.

I saw one home page with the date January 1, 19100.

On our local cable TV bulletin board (the thing that lists PSAs, school lunches, etc.)

the date rolled over to January 1, 1900.

In the grand scheme of things, these aren't too bad.

The Minnesota News Network had an engineer on call and a program manager in the office at midnight to make all the computers that handle sound and scripts (I don't know about sales and bookkeeping computers downstairs) were turned off before midnight, turned back on after midnight and checked for correct date and time settings.
Now if only we could proof against the random power outages that hit our building a couple times a year and crash everything in the newsroom including the network feed equipment, with no warning. They're not even usually thunderstorm-related.
Welcome to 2000.

You can get UPS's (uninterruptable power supplies) for that. A UPS is
a box with storage batteries, power converter (AC to DC) and inverter
(DC to AC). The batteries keep you alive for a few minutes or longer
if you get higher capacity. Be sure the UPS doesn't feed laser printers
or coffee pots or else you'll waste power-up time.

It certainly would be a shame for this NG to become the SNL of newsgroups, as far as the fate of participants is concerned; yet it *would* be a shame to lose all threads at the end of the century. Apparently some care has been taken so this won't happen.

As far as Twin Cities radio goes, it seems there's almost nothing going on. You could call this town Chancelorsville as regards radio, and everyone's just waiting for the Clear Channel boys to take over--or at least to see who gets kicked out of the stable.

On New Year's Eve morning, KFI did its talk show from its La Mirada transmitter site. It sounded like it was coming from a concrete walled studio. The news and traffic sounded like they were coming from the Korea Town studios.

Since KFI began broadcasting from the La Mirada transmitter site in about 1938, I wonder if it has ever broadcast from the transmitter site before 12-31-1999?

Stan Kelton

-------- Original Message --------
Subject: Duty Shift on New Years Eve
Date: 31 Dec 1999 00:18:18 -0500
From: Gray Frierson Haertig <gfh@haertig.com>
Reply-To: gfh@haertig.com
Organization: Gray Frierson Haertig & Assoc.
Newsgroups: rec.radio.broadcasting

It has been mandated at the local CBS/Infinty stations that there be an engineer on duty at the transmitter site come the 1999/2000 roll over. In the spirit of making a virtue of a necessity, the DE has directed that the annual winter Eng. Dept. barbecue is going to be held on the eve of 31 Dec at the Sylvan XMTR site. All but one of the CBS stations is located at this site, and the other is only a couple of miles away. As one of their consultants I was invited to join the fun (and fix something if it goes awry).

Any other stations requiring engineering presence at Y2K?

Anybody else got any interesting activities planned?

Looking forward to the end of civilization as we know it,

Gray

> talk, and
> Chuck Harder in particular, were capable of inspiring in people like Terry
> Nichols.

If somebody is looking for something to do with extra time on their hands with no direction or focus, they will act in the way that is most comfortable for them to act. They won't ask for your approval.

I don't particularly care for Chuck Harder because Chuck Harder is not what I would describe as "conservative" but then again, you did describe Liddy, Limbaugh and Bob Grant as "ham-handed." (I'll wait on your definition of that one)

> But I hesitate to say there's been a trend away from political talk per
> se; Laura Schlessinger, who's really more politic than psych

That is not the purpose of her program. The only reason she brings politics into it is for examples of abnormal behavior coming from the holder of the Highest Office in the best country on earth and how people will blindly follow his (and her) lead to defend him.

Get it straight!

Remember if you don't believe in something, you WILL fall for anything.

> certainly has yet to peak, and check liberal Mike Malloy's numbers on WLS
> Chicago...

She has probably peaked for me personally, but that doesn't mean I don't still respect the meaning of her program any less. I do believe that it gets repetitious and that is the show's downfall. Great for the occasional listener, bad for people like you and me who listen as carefully as we do. We usually figure it out quicker than the average bear.

> ..nor would I say Westwood One is particularly cancellation-happy.

Who is? (- besides FOX)

> Remember, they kept Tom Leykis on through a period when he couldn't even
> be heard in Los Angeles,

It was not relevant at the time, since WWI figured he would be placed somewhere in LA, again. As managements change the nature of the medium is that it will change, accordingly.

> where his show is based

Let him do it from the moon or the bathroom, it is not relevant to the nature of the program.

When Ballance put the pix of Laura on his web page, he showed a disservice to her. I could put some pix and stories about what I did 20 years ago, but it wouldn't mean anything. There is a difference between Laura and Wild Willie, HE'S STILL DOING IT! He doesn't see anything wrong with anything he has done. And why should he, it got him to Presidency. But he is a self-absorbed LIAR!

Leykis had shows devoted to ripping up Dr. Laura after that story, I have no respect for somebody that blatant, who can't get it right on a national program.

Ballance has got to be close to eighty by now (I remember him at KFMB in the 70's), This is probably his way of fulfilling an ego who's glass has dried up.

34. Re: All-tech format

Newsgroup: rec.radio.broadcasting
Date: 2000-01-04 00:00:00 UTC
From: Steve Crowley <Steve@Crowley.net>
Message-ID: <064d32843230410CPIMSSMTPE01@msn.com>
Source record: 21501

A few thoughts on CNET and AMFM's All-Technology format announced 1/4/2000.

1. The announcement coincided with the opening of the US trading day. The street yawned. At the close: AMFM (traded as AFM) was down 2 3/4, CNET was down 9/16 after losing all the ground (5.4%) gained in a mid day rally.

2. Tactical errors? The press release --- CNET and AMFM to Create the Country's First All-Technology Radio Format (PR Newswire - January 04, 2000 08:16) --- has no mention of the impending merger with Clear Channel, or homage to the Mays clan. Have the merger-related firings already claimed the PR Dept at AMFM? On the site this action isn't mentioned at all. In fact, the most recent link on the "newsroom" page at amfm.com is an announcement of 3rd quarter earnings posted 11/08/1999.

3. 910 KNEW is licensed to Oakland. The transmitter site is located near Berkley. It is 5 kw full-time... non directional during the day; and a two tower array sends the strongest night signal toward the WSW. Signal strength in the direction of Silicon Valley on night pattern is about 2/3 of what you'd pick up on in the direction of downtown San Francisco.

4. KNEW has simulcast AC KIQI-FM in recent Arbitron ratings periods. The figures that follow are 12+/full week: In SF the combo was #16 in Summer 99 @ 2.6... down 1.0 from Summer 98. In San Jose, the same interval holds at 2.7, #15 in rank.

5. The proposed content sounds like MSNBC's sign-on partnership with Ziff Davis (tech publishers) for a nightly hour of tech news and trends (also based in SF) called "The Site," which dissolved after one year at the first available contractual jump point. MSNBC fired 40 people from a staff which had numbered 230. Sole publicly visible survivor of the venture: Soledad O'Brien of Weekend Today.

I don't know about what format will define the early 21st century (how does that grab you? :) but perhaps the means of delivering the programming will be more prevalent? What with the internet and satellites, the traditional AM/FM box isn't the only way to retrieve audio programming. Wireless internet? A walkman with RealPlayer technology built in?

John,
It all depends on the station, I work for a Clear Channel station and I played some rare christmas tunes and not the POP/CHR stuff, I also played Stan Freberg's song too.. It all depends on the station.

imagine if news organizations and stations were this well equipped and
manned all the time. and yes, there are a few of us still around who
remember when it WAS!

Southern California Radio Radio Wish List

or Why Local Radio Sucks

Once again, it's time to honor a tradition of putting out a radio wish list, that is, a list of improvements radio stations in the area should seriously consider putting into place if they would like to keep its listeners or grab them from other stations (and even MP3's and CD's), and thus improving their advertising cash flow.

It is now January 2000, the third year of doing the Southern California Radio Wish List.

Is radio in the area perfect? Hardly. Is it listenable? I very much bounce from station to station more often than not in my car. the radio stations that supposedly serve me has plenty of collective room for improvement.

Contrarary to corporate radio's opinion, music on the radio has gotten far WORSE than even before the MTV days, I mean, corporate radio just plain isn't taking any innovative chances in radio programming whatsoever, and their playlists, compiled by business people and researchers instead of musical directors for the most part, shows the lack of depth these playlists suggest variety wise while staying true to its format.

In order for radio to survive the possible threat of a mass exodus of automobile commuters going to pay-satellite XM Band radio, CD's, MP3 players, and even cassettes, broadcast radio must do something about their programming on the creative level before they take it to the marketing level, not just doing the latter without the former.

Two years have passed since I wrote this and San Diego radio, as well as Los Angeles, in general has degressed from music-based into business-based. Where are the people working in radio who are fans of music that they are supposedly programming? Their playlists tells you the story. Don't take my word for it. Just listen to their lists of songs and you'll be running back to your CD or pirated MP3 players in an hour's time.

Clear Channel owns or programs some 30 stations scattered all over Southern California, but who's counting anymore, and each one seems to sound like two of the others.

And as for the lone locally-owned Compass station Sets 102.1 down here in Oceanside? They're kicking ass with its locally-programmed station run by people who know what they're programming, and the variety speaks for itself.

Several notable omissions are: no upbeat adult contemprorary music playing swing and jazz mixed in without the watery wimp songs, no all-groove station, no station playing Dr. Demento weekly, no classic rock station that plays today's traditional rock, lack of an adult pop station that spans several decades of good adult pop from the 1950s-today, and no station playing all cool pop (meaning rock and rhythm) 70-80-90's hits (there's over 2,000 that can be played) all the time.

Here are some of my suggestions to make the area's radio broadcasting bands better, as well as other radio improvements that
You, The Radio Listener, Can E-Mail Me as well.

Sure Los Angeles has a low-power station playing KSCA-type AAA, but there's no real rock and roll or all-dance mix station down there.

Here are my suggestions to make local radio a better alternative to CD's and tapes in your car!

KOGO-AM: 600 We can use an all-news station for San Diego, and KOGO should be the job. Get rid of Rush, Roger and Rick and dump them back to KSDO 1130 to shore up its ratings and program in all news and other locally-originated related programming all the time! Talk in the afternoon drive? I don't think so. I'd rather hear news during the evening drive time. KNX 1070 is currently the only all-news outlet in Southern California, but it serves the Los Angeles area. Though most of their news is of use down here, we San Diegans can use the same down here (and L.A. can, of course, listen to news from San Diego from up there!) Remember the Harmony Grove fire from October of 1997? How far did KSDO 1130 reach the area at night for continuous coverage? Thought not. AM600 would be a much better station bringing in all-news, especially during very important news stories that break out and warrant a 50,000 watt blowtorch to cover all of San Diego county, and then some!

XTRA-AM: 690 End this ridiculous time shifting of Jim Rome's show and put him back on live at 9am! Kapish! Fix what's wrong with the sister sports station at 1150 in Los Angeles instead!

KDIS-AM: 710 LOS ANGELES -- Radio Disney...see 1240.

KFMB-AM: 760 Why Ted Leitner in the Morning? Bad move. Use your energies to come up with something better. With Ted working a lot of sports-related projects, how can he maintain a top quality morning show? Get back Stacy Taylor!

KCEO-AM: 1000 Your signal comes in OK during the day, but at night, you can't be heard south of MCAS, with your signal going down at night and a Seattle station also at 1000 taking over for South San Diego county. Can't you get a signal in that region to translate your programs on, say, 1400 AM, so we can hear Bruce Williams at night?

KNX-AM: 1070 LOS ANGELES -- No suggestions at this time.

KSDO-AM: 1130 End the KSDO.COM experiment and make this a talk station once again. Move Rush, Dr. Laura, and Roger Hedgecock here.

KXTA-AM: 1150 LOS ANGELES -- What's the use of protecting your signal to the south so that it doesn't interfere with the 1150 Mexicali station? I picked that station up more times from where I live than the L.A. 1150. Thanks to the bad signal, you've lost the Dodgers to KFI.

KCBQ-AM: 1170 Bring back Tom Leykus! Bring Back Bob Grant. Get rid of that Oliver North. This station has gone downhill since it went corporate last year. Bring the audience back to AM with promotions and better programming!

KSON-AM: 1240 Radio Disney shows promise, and it is the most innovative musical mix in San Diego, believe it or not, but get some localized programming into place. San Diego's children need a station that better serves them on the local side rather than from a sattellite signal from Dallas.

KPOP-AM: 1360 It just doesn't come in North County at night. Do something, anything to improve your signal!

KSPA-AM: 1450 The absoulute worst signal in San Diego county, coming from Escondido. This signal cannot be heard south of Miramar Marine Corp Air Station at night and barely as far as I-8 during the day.

KSDS-FM: 88.3 I applaud your efforts to strengthen your FM signal, but with XETV channel 6 VERY CLOSE BY IN FREQUENCY challenging your efforts to boost your power to about 20K or so, I have an alternative: Try to buy some other frequency in town from anybody if you can for dirt cheap, move your jazz format over there, and sell the 88.3 frequency away to UCSD, who is seeking a radio outlet for their KSDT campus radio station, currently on cable only. This will also silence XETV's need to block the signal boost...unless UCSD wants to boost that power, but that's another time.

KPBS-FM: 89.5 Only one suggestion: play some music from NPR!

XHITZ-FM: 90.3 Formerly one of the best stations in the early 90's, now it's nothing more than a mix of sleepy slow jam clones and oversampled rap drones. Z-90 used to be da bomb, now it's just a bomb. Bring back house music and "The House of Z", now! This station used to be the hippest in town, but now that it's just hip-hop and R-and-B, this longtime listener lost interest. Hip-hop and R-and-B is OK for easy listening and chilling out, but dance music needs a station of their own, as well as an outlet in San Diego! It's just as bland as KPWR up in L.A., see KPWR's entry for more on that. No wonder Mega 100.3 and Magic 92.5 are stealing your former listeners who are scared away from that scary rap stuff. Even Channel 933's dance mix shows are more stimulating than your hip-hop blocks, but on the fair side, 933 airs tapes of dance mixes instead of doing it live like Z-90 does.

XTRA-FM: 91.1 Among the rudest people I talked to, 91X is 91X in name only as it has lost any respect this former longtime listener paid them. Jacor has decimated this station so bad that I just can't give them a preset anymore. They did dump the weird grunge rock and electronica junk, we got KIOZ to play that grunge crap. Bring back the English rock imports, play faster and more upbeat modern rock, less folk clone acts, plenty of ska, modern rock, rocking swing and new wave classics, and get rid of Hillary

and some other no-name jocks who I can't relate to. Bring back the local flavor! The alternative music variety will eventually come around, but when? They're still not the cutting-edge of rock they used to be at the beginning of the last decade! Also, lose Loveline to 105.3 so we can hear more alternative music once again!

XGLX-FM: 91.7 No suggestions at this time.

KFSD-FM: 92.1 No suggestions at this time.

XHRM-FM: 92.5 This station seems stuck in perpetual old-skool mode 24/7. Good old school jams mix, but why only from the 60's and 80's (aka Period Piece format), and still no 90's rhythm sounds either? With Clear Channel being three stations over the eight-is-enough radio station limit in a market (not counting programming rights to Mexican-owned radio stations), you'd think that they would innovate and program well-partitioned formats, but some of the songs can be heard on K-Best 95, Z-90, KYXY, and even their own KJOY as well. 92.5 needs to retool this format in a hurry so that it doesn't sound like the other stations I mentioned. Play today's R&B/dance to go along with the oldies.

KHTS-FM: 93.3 Hello Clear Channel? What gives? You started out with a passing-grade dance format, now you've trashed it and turned it into a Top 40 mix of sleepy slow jams, cloned boy bands and monotonous wimp guitar songs, and dumped most of the dance songs, except during the lunch breaks and weekend nights. You have to listen through tons of monotonous boy-band and watered-down ballads before you can hear some of the better pop, rock, and dance tunes. I get bored to tears literally yawning through half their playlist. This station needs a competetor that can do the job better. Turn it back to a dance station playing house mixes of today's pop songs. When Channel 9-3-3 began, I was hoping it would evolve into a format similar to the late Groove Radio 103.1, which I could barely get in North County, or WKTU in New York, playing upbeat house music, without hip-hop and sleepy slow jams; let Z-90 have hip-hop and slow stuff and serve me up all the flavors of house music instead. Club 933 is a joke, playing rock and slow jams instead of REAL club music, you know, DANCE!

KJOY-FM: 94.1 Does San Diego really really need another sleepy pop station in town? What a waste of a 100,000 watt transmitter. I was actually satisifed with The Eagle, but now that it's K-Oh-Joy, you can kiss your preset on my car radio goodbye. May your intended listeners listen to KYXY or the romantica latin stations Heftel and the Mexican broadcasters are programming. This sounds like McMix from an earlier era. XGLX does the job better!

KBZT-FM: 94.9 Bring in something like the Radio-a-Go-Go 60's rare music series heard on KIEV 870 on Sunday nights.

KLOS-FM: 95.5 No suggestions at this time.

KMSX-FM: 95.7 Jacor started this uninteresting mix of 70's, 80's and 90's (that's how I order the decades) of a mix devoid of innovation and originality with recycled contemporary songs that you've never really cared

for that much anyway. Bring back Dave Smiley! What a complete waste of airspace! Where's your testicles to play some real music such as rock and roll and rhythmic music? Half the time, it sounds like KYXY! I've got an idea: give the music to KJOY, and since Clear Channel already owns or programs the other 10, they should open this station up as a public-access radio station for listeners to produce and program their music shifts. Should make for very interesting programming. Oh yes, bring back Dave Smiley to program an all-comedy morning show!

KYXY-FM: 96.5 Yawn. Wake up your station mix. Needs more contemporary adult pop hits. Play some upbeat swing and jazz, adult rock and upbeat dance music. Why so much depressing slow music? This station is not reccomended for listening while operating heavy machine equipment!

KLSX-FM: 97.1 Bring Back Dr. Demento!

KSDO-FM: 97.3 No suggestions at this time.

KIFM-FM: 98.1 Bring Musical Starstreams into town! Only The Wave 94.7 out of Los Angeles has it for those who can DX it from San Diego county.

MORE-FM: 98.9 Rock en Espaï¿½ol. No suggestions at this time.

MEGA-FM: 100.3 Play dance music of the 90's and 00's! That's it.

KFMB-FM: 100.7 Sure this station is still one of the most popular stations in town, but in my humble opinion, the narrow-playlist of current hits has to improve...FAST! Listeners are flocking away! You're playing too many slow songs. Where's the rhythm? "Blue" by Eifel 65 is my favorite as I write this, and you don't play it! Puleez! Yawn! End the predictability and be more adventurous. Star is totally missing over half of today's popular songs that can and should fit their adult format. They should introduce at least 3-5 songs a week instead of 1-2 hits a week. With that many listeners, you should be taking more chances and rotate your songs every week instead of every month. Do we really need to keep hearing songs that peaked last month every 2 hours? Star should play a far more selection of 80's hits (I been there, so I know there's more than 100 songs from that decade, in fact, I'm an 80's pop music expert as well). A similar format in Los Angeles, 98.7 Star, not only plays more of the modern adult hits 100.7 plays, but they also have a Friday night show playing a better mix of 80's songs and a Saturday night show "All Mixed Up" playing remixed modern rock hits. Star 100.7 should look into adding those excellent features to that station for the rest of us San Diegans to hear instead of the same old stuff we hear all the time anytime.

KRTH-FM: 101.1 LOS ANGELES -- no suggestions at this time.

KGB-FM: 101.5 Lose the dreaded Prophet automatic radio programming...now! This used to be a world class rock and roll station....back in the 70's and 80's, but no amount of publicity on the backs of buses promoting money giveaways will make me want to listen....unitl they fix and update the rock and roll programming first! Classic rock is a great genre (not a period piece), and there is so much to choose from. Don't be afraid to get a bit

experimental and play some stuff that isn't heard all over the place. Instead of Pink Floyd's "Money" for the umpteenth nauseating time, give us some more obscure track from "Atom Heart Mother." Instead of the Stones' "(I Can't Get No) Satisfaction" over and over, try something like "Memory Motel" from "Black And Blue," or something off of "Some Girls." You get the gist. And have some DJs who really sound like they're "into" the music. There is so much cool stuff in the classic rock vault; stop playing it so "safe." Your listeners need to be saying: "Wow, I haven't heard that one in ages." Also, it couldn't hurt to play more of the newer classic rock artists (I.E.: 1985-2000 songs) such as Paul McCartney, Van Halen, Rolling Stones, Tom Petty, and others' more recent rock releases, and play album cuts off their CDs for us to hear and to help us decide if we really want to shell out $20 for their albums. There's so much rock history that KGB has been part of since 1972, it's time to change for the new millenium!

KXST-FM: 102.1 Please, cut the Seal slow stuff and get more rocky!

KIIS-FM: 102.7 LOS ANGELES -- this station is still popular, no station in San Diego has ever come close to coming up with a better Top 40 format than KIIS ever has (not Q106, not KS-103, nobody!), except Jacor's own Channel 933 here. Their Friday and Saturday night pop dance mix is ok, but needs to have more dance music selections every week! Adding Full Frequency is great, but play some of the songs during the daytime as well. Why not expand the dance mix programs to every night as well?

KPLN-FM: 103.7 This is a very valuable frequency. Why aren't you doing much with it other than the same songs from the 60's, 70's and 80's? Why do we need an umpteenth clone of KGB? Play some 90's and 00's rock as well!

KBIG-FM: 104.3 Reformat this into a dance/house/groove radio station serving all of Southern California! Play a wider selection of disco songs, in fact, do a Sunday Night Fever playing more rare disco tracks that never get played during other times. Do an 80's Dance Mix hour nighly showcasing the best hits from the old KPWR days.

KIOZ-FM: 105.3 Get rid of that unfunny Mikey! Come to think of it, move the music to KGB! Merge the new rock and roll music into KGB. Reprogram it into a rock talk station. Bring back Tom Leykis there! Keep Howard Stern in the morning! Add exciting talk shows that aim squarely at the male demographics with a rock and roll soundtrack to go along. Move Loveline here and let 91X program alternative music late at night once again.

KPWR-FM: 105.9 LOS ANGELES -- in 1986 and lasting through the summer of 1991, this was my favorite radio station (sorry 91X and Q106) playing a wide variation of cool popular songs remixed and house mixes of modern rock and all that other cool stuff. What happened to your station since 1991? You supplanted it with all that junk rap and slow jam sleep eze I cannot relate to? That's one way to destroy your station by cloning the already successful 92.3 KKBT. Sure you have the excellent "Power Tools", but it's on Sundays at 2AM when most of us are asleep. KPWR, let's end this 9-year April Fools joke and get back to playing some real upbeat music once again!

Time for radio changes, and here's what you should do...

1. Fire all the people who haven't a clue what music is about. If you don't know how to appreciate music, then you just don't deserve a career in radio.
2. I would also fire anyone who has no clue about what listener relations are about. If you can't take the criticism, why be in the business? I can almost name several of Jacor's reps that don't deserve a job in radio for one reason or another. Um, what album did your request come from? Duh!
3. Hire musical directors and programmers that are completely independent of what the mainstream dictates mixwise, be bold enough to seek out new mushc and break them out on the air, then let the listeners tell you what works and what doesn't, and then you have your playlists.
4. Their jobs are to know the music they are programming, create innovative ways to get people to listen to them, and the only way you're going to get listeners is to not only play their favorites, but to introduce new favorites that sound original and don't sound like another song someone else made famous.
5. Encourage them to introduce nightly features that will be an interesting alternative to network television, which is also completely lagging in entertainment value nowadays as much as radio is today.

Radio Phone Listings Not Y2K Compliant

Whenever you pick up a telephone book, what section do you go to first?

Well, whenever I pick up the newest edition of the telephone book, I go to the listings under Radio Stations or Television Stations in the yellow pages and look up the call letters in the white pages.

In the Pacific Bell Smart Yellow Pages, San Diego, keep until May 2000, here are some radio listings I found in the book:

X99 Fiesta Mexicana 99,3 FM...they're now XHCR country.

In the Pacific Bell Smart Yellow Pages, East County, keep until Oct 2000, here's some listings:

KECR-FM Broadcasting...it's now Channel 93.3

In the Pacific Bell White Pages, San Diego, here's what I found:

K102-FM Dateline...whatever that was.

KCCW Poway?...what station is that?

KECR-FM Broadcasting

KKBH The Beach 102.9 FM Easy Listening Favorites...it's now K-Love 102.9 in Spanish.

KKLQ-FM Dateline...it's now La Nueva 106.5

KRC Rock...is that some kind of rock and roll station?

X99 Fiesta Mexicana

XHKY 99,3 Fiesta Mexicana

Y96 FM, 8033 Linda Vista (it's the KYXY 96.5 building, wrong handle!)

It just goes to show you, not every telephone book gets everything accurate. I looked around and saw no listings for Q106 or The Eagle just to be sure.

Monthly Rockline Guest List

List provided by Dr. Chuck

Welcome to the monthly Rockline guest list! Rockline is broadcast live every Monday and Wednesday night. The guest list is taken primarily from what they announce on the show. Listeners in the U.S. and Canada can talk to them by calling 1-800-344-ROCK (1-800-344-7625). Questions can also be e-mailed to rockline@aol.com.

All shows start at 11:30pm ET / 8:30pm PT and run 90 minutes unless otherwise stated. Previously recorded shows are marked with an asterisk (*)

Mondays:

January 3 - Best of Rockline (Part II)

Wednesdays:

January 5 - Chuck Negron

Also coming soon (we hope!):

Jackson Browne, Crosby, Stills, Nash & Young, The Eagles,
Lynyrd Skynyrd, Steely Dan, George Thorogood

*** Guest list subject to change without notice

http://drchuck.net/rockline
- Visit the Rockline web site to see:

+ The most up-to-date guest list (plus a few from the past)
+ Rockline WWWBoard... discuss the show and trade tapes!
+ Rockline Archive... the entire Rockline guest history (ok, most of it)
+ Rockline Station Roster... listen on your radio or on the web!
+ Rockline FAQ
+ The nifty Rockline button, link your web page to Rockline!

*** If none of your local stations carry Rockline (either on Mondays or Wednesdays), call some of them up and ask for it!

Chuck
(not affiliated with the AMFM Radio Network or any of the many stations that carry Rockline)

http://drchuck.net -> Albright College Home Page (unofficial)
Rockline / Dr. Demento Campaign (New York/Philadelphia Region)
Long Island Radio Dial / #Melissa_Etheridge on DALnet
ICQ:692904 / AIM:DrChuck68

Where are the Z-90 Mixes?

Josh from one of the radio messageboards answered my question with this answer:

Mon-Fri
6:30-8:00 Wake up mix
12-1 Grub N Groove mix
5-6 Traffic Jam
9-10 9:00 Mix

Fri/Sat nights
6 P to 4 A Street party
Sun 6-10 Old Skool Mixes

Plus during the summer holidays' They'll have Mixathons of 53 hours non stop.

Listen to Z-90 live at http://www.z90.com

New Time For The Madness Network

If you're up late Friday night or early Saturday morning, you can now listen to the Madness Network at its new time at 2:00-3:30 a.m. CT (12:00am-1:30am PT) in Chicago/online!

http://madnessnetwork.veryweird.com

Y2K Glitches

Has your radio website or office computers experienced some Y2K glitches this past weekend?

You wouldn't believe some of them. I received an e-mail from XOOM and the date was dated Jan 02, 100. 100?

When I was using my WS-FTP program to upload the files, sure enough, the date display read 1000103 instead of 000103.

So what should we call the 00's...the hundreds? Sounds better than calling them the naughts or double-ohs or whatever else.

On the insidetheweb.com messageboard, I came across a date 01-Jan-100 as the date it came to the postings.

Other glitches I came across include e-mail dated 1910 or 1969, a USENET posting dated 1980, and in a bizarre twist to the problem, Vice President Al Gore encountered the Y2K bug on his own website!

The computer glitch took a tiny bite out of Gore's campaign Web site. The damage came inside his "virtual town hall," where a message from a supporter was dated January 3, 19100.

When 1999 became 2000, some computers decided that the year following 19-99 is 19-100.

Gore's campaign explained that the mistake was visible only on computers using a certain type of browser and that it was quickly fixed. Besides, they said, it wasn't exactly a major glitch, even for the man who once claimed to have invented the Internet.

"Maybe a few people saw an error. Most people didn't. It's extremely minor," said Gore spokeswoman Kathleen Begala. "Be that as it may, we want to have every person dialing up http://www.algore2000.com to get the perfect Web site. And now they will."

Other yearly glitches include Windows 3.1's File Manager where if you update the files in the year 2000, the two-digit date reads ":0". The reason is technical, but the decades digit slot goes in the sequence of "89:;<=>?@A"

One last glitch...when the year rolled over from 99 to 00, so did the amount of people who listen to Todd Kelly's night show on KGB!

Does Anyone know of a (free) service that allows you to enter a US city and find out what market they are in? I'm starting a radio/press data base, and unfortunately do not know where some of the cities are, in reference to their markets.

Thanks,
Claudia Draeger

Source record: 21596

FYI: WNEW 102.7FM NYC was using the FM Talk@1027 ID on air week days
and just 1027 on the weekends when music is still played.
New management has changed the ID to 1027 WNEW. Supposedly the
FMTalk@1027 logos are also being replaced with 102.7 WNEW.
The afternoon show started to use 1027 WNEW Monday.
What this all means who knows:)? There still talk radio.

Updated Jan 4, 2000

Subject: Southern California Radio and TV Page

You can visit my Southern California Radio and TV Page at...
http://www.geocities.com/TelevisionCity/Station/2700/indexrad.htm

or

http://www.davesfunstuff.com/radio

Now with links to related news sites, as well as links to 13 messageboards!

I'm also accepting news bits to post in my Radio/TV news section.

NEW! Radio Station Logos section!

Also included: a list of HDTV stations, plus a list of stations
broadcasting in Spanish for all of Southern California and Northern Baja.

Radio programs in the station listings.

Links to all the local area radio and TV stations that I know of, and noted
which ones are in Real Audio

DX catches in the So. Cal area plus all the DX stations in North Americal.

Digital TV Channel assignments to the local area stations.

Frequency lists of the TV and cable sounds for those with scanners and
pocket VHF radios.

Expanded local AM and FM radio talk show listings. Formerly restricted to
morning drive shows, but this comes in handy since shows keep getting shuffled
around and times switch. Always accepting updates to the program guide.

The addition of four pages from the FCC database, reeditied into the local
AM, local FM, local TV and nighttime AM DX-ing radio stations. I wrote a
QBASIC program to compile the huge tables, but I changed no fact from the
databases, as they contain errors, especially with the Mexican stations and
owners. I should be updating this soon.
I still have my own four pages of AM, FM, TV and DX pages I composed with
formats and updated and corrected calls that I came across.

Some recent radio news of note on the front page.

good luck

I've heard that Ken Stevens of DC's hot talker WJFK 1067 is the new GM at 1027 in NYC. So I suspect that the station will start to sound more like DC's WJFK. Granted, NYC's 102.7 won't have Howard Stern in the mornings, but I wouldn't be surprised to see Gordon Liddy, Sports Junkies, Don & Mike show up on 102.7 sometime soon. As with WJFK, sleepy lite jazz in the overnights and infomercial talk on the weekends. Could be at 102.7 in NYC too.... Just my guess.

52. Kennard sells out LPFM service

Newsgroup: rec.radio.broadcasting
Date: 2000-01-05 00:00:00 UTC
From: Rodger Skinner <radiotv@cris.com>
Message-ID: <3872EB7A.BF130954@cris.com>
Source record: 21508

According to a story in Radio & Records, the FCC will vote on Jan 20th to make the new LPFM service "non-commercial only" with a max power limit of 100 watts!

If this is true, Kennard has sold out to the wishes of the NAB so LPFM can be no economic competition to NAB stations. This dashes the dreams of hundreds of folks who have worked in broadcasting the entire life and were hanging their only hope of owning a station on LPFM.

I urge everyone to write or call Chairman Kennard 202-418-1000 and tell him what you think about this last minute sell-out! He had been our biggest supporter till now!

Once again the big-monied NAB has succeeded in crushing the hopes of the little guy who wanted just a little piece of the broadcast pie. We are weighing our options and will post more at the website www.concentric.net/~radiotv

There is absolutely no reason to make the LPFM service non-commercial only unless you are bowing to the wishes of the NAB, who is afraid of any competition. This sucks, bigtime!

53. Re: US Markets

Newsgroup: rec.radio.broadcasting
Date: 2000-01-05 00:00:00 UTC
From: Steve Crowley <Steve@Crowley.net>
Message-ID: <073bf3520080510CPIMSSMTPE01@msn.com>
Source record: 21509

Claudia Draeger of GSMgmt asked:

>Does Anyone know of a (free) service that allows you to enter a US city and find out what market they are in?<

A couple of suggestions:

1. http://www.infospace.com/info.abii/index_ylw.htm
If you're starting from scratch, an online yellow pages system will let you start with a business listing in any given city, and expand your geographic search radius to include more listings.

2. http://www.gebbieinc.com/index1.htm
The Gebbie Press (of suburban NYC) attacks your stated problem in reverse, giving searchable listings of radio, TV, newspapers and magazines using the region as a starting point.

3. http://www.amazon.com/
Look up the Places Rated Almanac, online - or at public library. Although I haven't seen the latest version, previous editions listed all the communities contained in each profiled Standard Metropolitan Statistical Area defined by US and Canadian census authorities. The book costs about $25.

4. http://www.census.gov/cgi-bin/gazetteer or
http://www.mapblast.com/mblast/mAdr.mb
Let's assume you already have an existing mailing list. If you enter a city and state or zip code, you'll see a map of the area... zoom out to place the locale in context of a region or larger market.

5. http://www.rronline.com/Ratings/RatMain.asp
Even if physically in an area, all stations are not created equal. Measure a station's relative impact in the region they claim to serve with the previous year's Arbitron ratings. The numbers estimate the average share of people over 12 listening at any given time between 6am and 12mid over full weeks of the given survey periods.

I believe that we will go further down the tubes, and we will get blander, less imaginative radio. Talk radio is in, why? because we get to hear something different. We need to get programmers that care about the music not the 3hr rotations and five fave bands of the week. it's depressing to spin the dial and catch the same Backdoor boys song on three different stations, it's even more depressing to hear the same voice over bumpers from the same guy. Hey if we're going to consolidate that much, why don't you just pipe the music in by satelite and shit-can the on air talent and just sell air time, after all it's all about the cash right?

Hi,

I'm looking for ways to promote my new CD, "Blooztown". Since blues is a niche market, I'm not going head to head with Puff Daddy or Madonna. I found a site that advertised it supplies satellite radio stations with a "promotional library", then gave a link to a site that tracked airplay on satellite stations (www.atlantic-satellite.com). While the site listed cuts from promo libraries, they didn't show up until #453, and then scattered throughout the remainder of the top 1000.

Does anyone here know the legitimacy of their claim that promotional libraries are the only way to get onto satellite radio unless you're a major label act? I know a bit about regular commercial radio and the college radio market, but satellite radio is completely new to me.

Any info is GREATLY appreciated.

First, LPFM hasn't a snowball's chance in hell of being profitable.
Second, LPFM proponents were, allegedly, doing it for the good of the
community and not as a filthy commercial service. You know, niche
formats, all news on a shoestring - that sort of stuff.

Play only music recorded between 1927 and 1947. Accept no ads for
undertakers or cemeteries. It's youth music. For example, Helen Ward
was 19 or 20 when she worked for Benny Goodman....

Tom Betz reminded me that there is widespread life after "The Site" when he wrote:

>Craig Miller does a weekly show co-produced by Ziff/Davis and HGTV called "21st Century Home", and most of the rest of "The Site"'s people have moved on to ZDTV.<

Glad to hear it. I meant no disrespect to the others on the show... which I enjoyed watching, btw... But I've never seen 21st Century Home.

Let me reframe my reference. With 4 hours a week on a broadcast network show as an anchor on "Weekend Today", and assignments for "NBC Nightly News", Soledad O'Brien is the most visible of "The Site's" alumni.

62. Chicago Eddie Schwartz

Newsgroup: rec.radio.broadcasting
Date: 2000-01-05 00:00:00 UTC
From: "Donald D. Forsling" <ddforsling@uswest.net>
Message-ID: <VHNc4.83$z4.3388@news.uswest.net>
Source record: 21518

Yesterday, I was pawing through a big box of cassettes I'd saved over the years and found a copy of a feature that Scott Simon did for NPR back in 1978.

It was titled "Night Keepers of the Radio" and focused on a night in the lives of two personalities, John Landecker on WLS and Chicago Eddie Schwartz (sp?) who was at that time, I think, on WMAQ. I say "I think" because at the beginning of his show on the feature, the carted announcement said that, "Now, Group W Westinghouse presents, Chicago Eddie Schwartz followed by a little bouncy theme ending with a group singing Eddie's name. I think WMAQ also because Simon stated, "now we go down the dial 220 kHz and join Eddie Schwartz, etc" and since Landecker was at 890 for sure, that'd but Eddie on 670.

The point: Who _was_ or is Eddie Schwartz. Is he still in radio? Is he still alive? I recall hearing him on the overnights on WGN when I was driving into work at about 4 A.M. He had (has) a squeaky voice, he sounded as though he were overweight (how is it possible to _sound_ overweight?), but at the same time he had a sort of common touch and funky charm about him. I rather liked him and it was fun to hear him for five minutes or so yesterday.

So, that's the question. What's the story of Eddie Schwartz? Anybody?

Probably some marketing genius figured out what anyone with a brain already
knew. The "102.7 WNEW" slogan was really identifiable. Even with a
different format, you get a lot of milage out of a slogan that's old.

(Has WNEW been using that for decades now?)

Chicago Ed was on WMAQ for a while, WGN for ages, and is
currently working outside of radio. He has been in
extremely poor health in recent years, and yes your
hearing is very discerning, he weighed over 300 lbs when
your tapes were made. He was so huge, that he couldn't
reach the faders on the board and had to use rulers, at
one point, to operate the hardware.

Chicago Ed WAS the voice of overnight radio in Chicago,
and there is still a large interest in his welfare.

..Schwartz appeared on WMAQ only twice, when the station picked up sponsorship of his Christmastime food pantry fundraisers. Prior to that, he was on WIND from 1973 to 1982, WGN from 1982 to 1992, and WLUP (both the AM and FM) from 1992 to 1995...he now writes a weekly column for the Lerner Newspapers in Chicago; the column appears on the Web every Wednesday, and any web search should be able to pick up the URL...

..regarding his weight problem, Schwartz weighed at least 600 pounds at one point. In fact, according to Larry "The Legend" Johnson (whose WIND show Schwartz produced in the early '70s; Schwartz also produced Robert W. Morgan's WIND show as well), when WIND was bought from Westinghouse and switched over to a Spanish-language service in 1995, a reunion party of all the old air talent was thrown at a Chicago hotel; Schwartz was unable to attend, Johnson told me, because he couldn't fit through any of the hotel's elevators' doors...

If the LPFM has no chance in hell of being profitable, then let the listeners, or the potential owners take it upon themselves to find a way to make it profitable. I do not understand where you (speaking in general terms) or anyone else can tell me what can or can not be a money maker.

If you ran the LPFM as a full blown signal, hell yes you wont make sqat!

But if you take a chance and some things differently, you should have at least the OPTION to give it a go.

If bigger stations are wooried about fragmenting key P1 listeners and hot zip codes, well, damn, find a way to service your market rather than do cookie cutter radio. For too long now radio has been about quantity rather than quality of delivering product (listeners) - well thats another rant.

Back to lurking

DJB

BTW, I do not have LPFM intentions or for that fact know anyone that does.

Been scanning the dial in search of G. Gordon Liddy, but no luck. When I lived down here before, the G-Man was carried on WTRR-1400 out of Sanford. However, that frequency is now en Espanol. Also would like to be able to hear Ollie North again. Information about Central Florida afilliates OR other afilliates with streaming audio via the Web would be appreciated.

Yea, but I still associate WNEW with 1130. Did the FM give up the "-FM" when the AM became WBBR?

Bravo! LPFM should be just that, 100 watts or less, a niche format service for the community with no commercials. What the hell do we need low power versions of existing corporate radio for???? Keeping LPFM commercial free means it will be a voluntary, tax free operation. You want to deal with the IRS and EEOC just to operate a low power station? If LPFM was a commercial service, then it would become just as homogenized and formated as the corporate flame throwers. Kennard is really being generous with 100 watts. In any urban neighborhood 50 watts with an antenna hight of 30 to 50 feet will do just fine. Out in the sticks I could see the need for 100 watts. Stop trying to compete with commercial radio, take what you can get, do something different and have fun.

But I thought LPFM was about smaller, community oriented stations?

How much power did you really expect, anyway. 50 KW and 100' HAAT?

Rodger had in fact favored the 1000-watt LPFMs and commercial operation.

Personally, I have nothing against commercial operation but I think auctioning of LPFM licenses would *completely destroy* the value of the service. I didn't see any way that a commercial LPFM service could avoid auctions. (I know Rodger disagrees with me. He failed to change my mind<g>.)

I agree that 1000-watt LPFMs are unnecessary. Class A service under current rules covers that kind of operation, and each 1000-watt LPFM would preclude too many of the truly valuable lower-power stations. I did propose a maximum limit of 100 watts, mainly to fill the gap below the powers allowed by the existing regulations.

IMHO very few people (with the possible exception of equipment manufacturers and consulting engineers) are going to make any real money from LPFM. This service will be a *service*, not a business.

Subject: Rock-it Radio show #132 is released

Rock-it Radio listeners club - http://www.rockitradio.net

Hello Everyone,

Just a brief note to let you all know that the first show of the
year
2000 has been released on the Rock-it. This week it is a tribute to
Rollin Rock Records out of Las Vegas Nevada. They have just come out
with
there 3rd CD Rollin Rock #103 to be exact. And has made some Rock and
Roll History by recording the original comets that played with Bill
Haley
& the Comets from 1952 to 1962. We feature the greatness in this show
of
all of the Rollin Rock CD's that has come out thus far. To Tune into
the
show is very easy all you have to do is go to our archives page at:
http://www.palmsradio.com/rockittext.htm and then click to show #132.
The broadcast is in real audio format -- if you don't have a real player
on your computer... you can download one for free at
http://www.real.com.
Here is the playlist of the show.

1. Ice Man Blues -- By request Big Joe Turner
2. My Life's Ambition Cattie Ness & Revenge
3. I hate the Moon Mack Stevens
4. Big Dog Rock Mack Stevens
5. Don't hold my baby Rip Carson& Twilight Trio
6. Gamble my Life away Rip Carson& Twilight trio
7. Crazy Man Crazy Original Comets
8. Shake, Rattle & Roll Original Comets
9. Tweedle Dee Elvis Presley
10. Red Headed Woman Sonny Burgess & Pacers
11. The Valley of Love The Chavellers
12. Miss Ann Little Richard
13. Minnie The Rainbows
14. The Sun Keeps shining Everly Brothers
15. Let's Go Baby Billy Eldridge
16. Make with the Lovin Dennis Herrold
17. Pucker Paint Huelyn Duvall

We hope you enjoy this selection we are also in the process of encoding
Lane Quigley's latest show which is as always nothing short of

fantastic!
and should be up by tomorrow. We will keep you posted. We hope that
all
of you had a good New Year's and thanks again for tuning into Rock-it
Radio.

All the best,

Bennie Dingo

As expected for several months, Eagle's B-104 (KVGB/104.3) has switched formats this morning. Say goodbye to Lite A/C and hello to "THE POINT" with Classic Rock of the 60s, 70s, and 80s. This puts them into direct competition with Radio, Inc.'s KFIX/96.9 (Classic Rock) and into secondary competition with their Hot A/C, "Mix 103FM." Initial sweepers have "THE POINT" already taking shots at KFIX. "You've had your FIX, now here's the POINT! We play Classic Rock!" Eagle Communications and Radio, Inc. are the two big guns in this region. This will likely get quite nasty before it's all over with. Plus, there's much more to come in the next few months. When will the next shoe drop in this rapidly-escalating "mini-market radio war?"

CNET and AMFM Create All-Tech Radio Format

The big radio story of the week features the announcement about a radio company teaming up with a technology company to create a new format and hoping that the public's growing fascination with the Internet will support it.

Soon, commuters in San Francisco will be able to turn off the soft rock and tune into software news on a new radio station that broadcasts all technology news, all the time.

AMFM Inc. of Dallas and CNET Inc., a San Francisco-based technology news and information company, said Tuesday they will offer listeners a mix of news, reviews and interviews.

The all-tech radio format will include breaking news stories on technology and interviews with major industry figures. Stories will also be broadcast on CNET's online radio service and promoted on CNET's Web sites.

The radio station will carry the handle of CNET radio, debuting Friday, Jan 14th, on KNEW-AM 910 in San Francisco. It will be broadcast across Silicon Valley, where the area's legions of high-tech workers will be able to tune in from 5:30 in the morning all the way through to 7:00 in the evening.

Currently KNEW simulcasts adult contemporary music with a sister FM station.

Don Barret of http://www.laradio.com comments that "it's very likely that the format, called CNET Radio, will arrive on an AM outlet in the Los Angeles-Orange County market before the end of the year."

If that format takes off, look for all-tech formats to migrate to other cities with a concentration of high-tech enthusiasts.

CNET produces extensive technology news on computers, technology, product reviews, and the Internet for its own Web sites and for a related cable

television program. It also owns a 13 percent stake in NBC Internet Inc, the online arm of the NBC television network.

Although it could be a success for the Internet crowd, but what about appealing to the masses? Would this tech format be too niche to succeed?

The radio station is not designed as a niche station serving a small market of computer geeks. CNET plans instead to expand the all-technoloy radio format nationwide by the end of the year. And rather than struggling to fill 13 plus hours a day with technology tidbits, CNET insists its biggest struggle will be deciding what will make the cut.

``There are about three to four hundred news releases that come out of the high-tech industry every day. We might jump on four to six of them,'' explained CNET Radio director Brian Cooley, who said he expected the new program would have a mainstream appeal.

``News radio now is all about murders, fires, sports traffic, weather and the Chechen revolution. Frankly it is stuff that does not affect the listener. CNET Radio will be all about the listener.''

This format could be a smart move, leaving news about murders and fires and other related items to the general news stations, while CNET will not only focus on news about the Internet computers, and related businesses, it could also generate advertising revenue at a time when an abundance of ``dot com'' advertising has made radio highly lucrative. The radio show could be an effective branding tool for CNET, which is itself a dot com company that has struggled to build recognition.

"In a high-tech market like San Francisco, there certainly is demand for this," said Christopher Ensley, an analyst with Lazard Freres & Co. "I don't think that's going to be true in every market around the country. It's probably a niche format."

"It's an experiment," acknowledged James de Castro, chief executive of AMFM's Internet operation. "Compelling radio works anywhere. Is this going to be compelling enough to put on AM radio in Dallas? I don't know yet."

CNET will produce programs that will air from 5:30 a.m. PST to 7 p.m. PST, or 8:30am to 10pm Eastern Time. The remaining hours will be filled with advertiser-provided programs, replays and music or a feed from CNN, as well as additional technology-based programming.

The station will serve up a mix of breaking news about technology, reviews of new products and interviews with major industry figures. Programs will also be broadcast on CNET's Internet radio service and promoted on CNET's Web sites and AMFM's six other Bay Area stations.

AMFM and CNET will share the station's advertising revenue.

CNET produces news on computers, technology and the Internet for its own Web sites and for television. It also owns a 13 percent stake in NBC Internet Inc., the online arm of the NBC television network. It had 1998 sales of $56 million.

AMFM, which is 27 (HA! A Weird-Al Yankovic number!) percent owned by the Dallas investment firm of Hicks, Muse, Tate & Furst Inc., owns more than 440 radio stations in 100 cities and had 1998 sales of about $1.2 billion.

AMFM's pending acquisition by Clear Channel Communications Inc. of San Antonio, Texas, is expected to be completed this year and would create the world's largest radio network with more than 800 stations.

CNET Radio will have a companion Web site at http://www.CNETradio.com, which will feature live streaming audio of CNET Radio broadcasts. That way, you can listen to the station even if you live outside the range of a nearby CNET Radio station.

Under the terms of the agreement, CNET and AMFM will share revenue on the sale of advertising on the new station. Additionally, AMFM will cross-promote CNET Radio on its six other San Francisco-area radio stations.

If Los Angeles gets a CNET format, where would it go? Among the AM stations in the area, AMFM is the owner of nostaligic KLAC 570, closing on the deal to own KFI 640, and once AMFM merges with Clear Channel, which owns XTRA Sports 1150 and brokered programming KEZY 1190, and one of these four are sold, it may then be possible to explore a possibility of a CNET radio in the L.A. area programmed by Clear Channel/AMFM.

Radio Unica Comes to San Diego

Radio Unica, a Spanish-language radio network based in Miami, is making its first foray into San Diego, the nation's 10th largest Hispanic market.

Radio Unica Communications announced this week that it has entered into a lease agreement with an option to buy KURS-AM 1040 in San Diego from Quetzal Bilingual Communications of Chula Vista.

The agreement includes a two-year lease, with the first option to buy the station after eight months, for $10.1 million in cash and stock, said Steven Dawson, the chief financial officer of Radio Unica.

"This is an opportunity for us to, in effect, test drive the station," Dawson said.

KURS-AM was renamed Radio Unica 1040 AM San Diego on Jan. 1 and began running the Miami-based network's programming, which consists of syndicated talk, news and sports.

The station, which went on the air in 1992, had broadcast mostly music with some locally produced talk and sports, including broadcasting San Diego Padres games in Spanish.

But KURS-AM had been facing increased competition from FM Spanish-language music stations in the San Diego market, and the Radio Unica programming will help it gain market share, said Jaime Bonilla, president of Quetzal

Bilingual Communications.

Under Radio Unica, the station will continue to broadcast Padres games.

Radio Unica operates 14 stations in the major Hispanic markets in the United States (including KBLA 1580 in Los Angeles) and had sales of $11.1 million for the nine months that ended Sept. 30. The company had an initial public offering of stock in October that raised $109 million.

This is Radio Unica's first entry into the San Diego market, which has 705,000 Hispanics, or 2.3 percent of the nation's total. The company last week announced an agreement to acquire KFRE 940 AM in Fresno, an English-language station.

Visit Radio Unica's website at http://www.radiounica.com/

Groove Radio Returns!

Swedish Egil (or Swedish Eagle as people mistakenly call him) is returning Groove Radio's dance music format to the demanding public via the Internet beginning Tuesday, January 11th.

Egil is known in the Los Angeles market for his music programming duties at KROQ 106.7 playing alternative rock, MARS 103.1 (the duo now known as KACD Santa Monica, KBCD Newport Beach) from 1991-92, and its successor Groove Radio 1996-98 (also as owner until 1997). You can hear the dance music once again beginning Tuesday on 01/11/00 (decimal, but it looks binary) http://www.grooveradio.com

The GrooveRadio.com studios are based in Santa Monica, and will broadcast live 24 hours a day, seven days a week.

"We want to replace the passive radio experience and build a dynamic community of like-minded fans - a place where people can meet, greet, get information, or simply listen to some wicked groove music. GrooveRadio.com will continue be dedicated to the future of music and will always deliver on its promise to showcase emerging artists and djs," commented Egil.

(prompted by the discussion of 102.7 WNEW-FM New York's identity crisis)

No surprise some people identify a plain WNEW with the old AM station, even though it belongs to only the FM now. It's the product of decades of conditioning.

The issue of marketing wisdom is somewhat different than the legal question.

IIRC: From the times when AMs were known as "standard broadcast stations," "-FM" or "-TV" were required by the FCC only when licensees had more than one property using the same calls. For example; WBZ, WBZ-FM, WBZ-TV

I don't believe the FCC required AM's to ever say "AM" except in the case of simulcast station IDs... for example "The Spirit of New England, WBZ-AM+FM Boston, Group W - Westinghouse Broadcasting."

Stand-alones like WBCN weren't required to say "FM," nor was (Channel 5) WCVB required to say "TV." And ironically if an AM station were to adapt the calls of a previously stand-alone FM, it would be the newer AM who'd get to say the original letters, and the station with the senior claim to the name would have to add an "-FM."

As a journalistic practice, Claude Hall (then Radio Editor of Billboard Magazine) began labeling both bands in his columns in 1972... which was regarded as a pretty radical move when AM was as dominant as FM is now.

Back in Boston, the call letters WMEX (first made famous as Top 40 on 1510) have been resurrected for use by a talk station on 1060 (which signed on as Top 40 WGTR Natick in the mid 70's) and a previous use in the 90's on 1150.

So here's the question:

If call letters have recognition through a remembered association, is their any real benefit to using them represent a different format elsewhere on the dial?

Personally, I say it's tough to keep up with the alphabet soup... harder still when owners are stirring the mix with a 75hp Evinrude that belches blue smoke.

In the engineering database, the service designation appears simply postpended to the base callsign - so you see "WCFCTV" and "WHPKFM" in Chicago. (incidentially, to my knowledge there are no WCFC AM or FM and no WHPK AM or TV) Strangely, the DT and LP suffixes for TV stations appear with the dashes, so there's "WLS-DT" and "WOCH-LP".

I have seen it suggested that the FM or TV suffix is considered part of the callsign, so that "WCFCTV" is considered a six-letter call. That being the justification for resurrecting WJZ-TV for Westinghouse's station in Baltimore.

> As for legal ID's, there is no FCC requirement (nor has there been one
> in the last 30 years that I can remember) to include the service
> designator in the call.

I would be pretty confident the service designator is necessary if it appears on the license! (if you're a TV station whose license says "WTTW", you only have to ID as WTTW, but if it says "WMAQ-TV" on your license, you'd better say WMAQ-TV...)

88. Re: Help with 1590AM California station(?) heard in UK

Newsgroup: rec.radio.broadcasting
Date: 2000-01-08 00:00:00 UTC
From: Steve Crowley <Steve@Crowley.net>
Message-ID: <0eb604235210810CPIMSSMTPE01@msn.com>
Source record: 21452

Paul Crankshaw asked about "a 'John and Jeff Show' transmission"..."Heard at 0745 UTC on Friday 7 January on 1590AM in Scotland UK"

According to http://www.radioguide.com/lalist.html the John & Jeff Show originates on 97.1 KLSX-FM Los Angeles, weeknights Midnight to 3 AM Pacific Time (GMT -8).

Let's follow the clues...

Stephen C. Propes is most likely correct that "South Coast Fitness Center" would not advertise on a station so far away from its clientele. However it is possible that they would advertise on KLSX, which is draws a substantial audience in Orange County, CA where the business is located.

1590 KUXN-AM in Ventura, CA is listed as a Spanish Language format (broadcasting regional Mexican music) as reported by Radio & Records magazine:
http://www.rronline.com/Ratings/ratmain.asp?mkt=oxn
And as of this posting I hear Spanish there. So it isn't likely to have carried the program... at least not deliberately.

I believe a possible solution to your mystery lies in the fact that KUXN is owned by Gold Coast Broadcasting, who operate a large cluster including KVTA-AM (an English language talk radio station), and KKZZ-AM (nostalgic music from the 30s-40s-50s) in the Oxnard-Ventura, CA market.

Suppose a careless control board operator (bored with the program on his own station) wanted to listen to what the competition on a larger and more prestigious station targeted closer to his age group was doing?

It could be that he tuned 97.1 FM and played it through the console to hear it on the large monitor speakers, but in doing so inadvertently displaced the programming intended to be broadcast over KUXN.

> WNEW-FM.

Well, I see what you mean, but it's not quite right. There is never a
formal appendage after the call letters of an AM station. Thus, there has
never been a station on the air whose official call letters were "WNEW-AM".
The _FM_ station with the "root" WNEW call letters gets the appendage and is
thus legally WNEW-FM. The _"FM"_ is part of the legal call of the station.
Thus, an announcer saying during a simulcast that "You're listening to WNEW
AM and FM, New York" would not be giving a legal ID for at least three
reasons which I can get into later if anybody cares.

Cheers.

Source record: 21456

Icemanny heard a commercial free overnight of music on WNEW and wondered if "12am-6am time slot a bad time to sell ad's?"

Yup.

Here's a comparison is based on figures from Seattle in 1994... your mileage today in NYC may vary, but the principles are sound.

For every one listener in 12m-6a there are (on average)...
twice as many at any given time in 7p-12m (7 days a week);
four times as many 6-10a & 3-7p Saturday, 10a-7p Sunday;
six times as many 6a-7p Weekdays & 10a-3p Saturday.

The ratio can be as extreme as 30:1 when you compare your city's peak hour in morning drive (say 7-8a) to the valley (perhaps 3-4a) when people who stayed up late have gone to bed, and those who get up before dawn haven't yet.

Overnights are overlooked by sponsors because they lack the mass audience needed to build image through achieving a high number of gross impressions, and frustrate impulse buying because almost everything's closed. Overnights are overlooked by radio salespeople because smaller audiences mean lower ad rates, which in turn mean lower commissions for the sales people.

Clients who want overnights alone because of cost are invariably high-maintenance -- not worth the trouble. So, unless specifically tasked to obtain overnight advertisers, a salesperson under pressure to post dollar volume will pursue prospects they believe more likely to give a higher return on the time invested in securing their business.

Some national sponsors may play specifically to an audience that can't sleep. Which is why a company like Chattem (makers of Gold Bond Powder) have turned many a talk radio program into the "Itchy and Scratchy Show."

So many of the local ads heard on overnight are "comps" (which erode potential profits by consuming air time that might be sold) -- given at no charge in order to give "added value" to clients who went into sticker shock over the asking price for their schedule of daytime commercials.

Source record: 21544

I was just listening to Ed Turk on WNEW, as they play rock music
overnight (12am Sat 6am Sat), and he said there were no commercials
[airing] just rock music.
The question I have is,
Since WNEW is not doing talk radio Saturday and Sunday over nights
were the advertisers buying ad's if any low?
Or is the 12am-6am time slot just a bad time to sell ad's? It just
seems strange that no one would buy air time to run commercials during
the over night.

Thanks for any info.

96. Help with 1590AM California station(?) heard in UK

Newsgroup: rec.radio.broadcasting
Date: 2000-01-08 00:00:00 UTC
From: paulc@easynet.co.uk
Message-ID: <20000108132745750286@paulc.easynet.co.uk>
Source record: 21546

Can anyone help me with this?

Heard at 0745 UTC on Friday 7 January on 1590AM in Scotland UK

Ads in the middle of a 'John and Jeff Show' transmission

1 Spa at South Coast Fitness Center at Costa Mesa CA (phone
714-850-0050)

2 Sword Medical Center for Hair Replacement (1-800-242-6900) - internet
check shows 5 centers in the LA area

Can anyone tell me if there are any Californian stations (LA area?) on
1590 transmitting the John and Jeff Show?

The only feasible station I can find on 1590 is KUNX in Ventura (just
north of LA). I've heard the occasional West Coast station before (all
50 kW but none from California) but KUNX is listed as 5 kW - so it seems
unlikely (but you never know!)

Is there a website somewhere on the Net which features chart positions of recurrents and oldies ? Or at least tells me which songs have made it into the
charts in the past decades ?
Thanks,

Herbert Visser

I know a lot of stations that have a lack of Commericals over
nights. Overnight doesn't seem popular for Ads!

100. Re: Station Names

Newsgroup: rec.radio.broadcasting
Date: 2000-01-08 00:00:00 UTC
From: Gray Frierson Haertig <gfh@haertig.com>
Message-ID: <38777F7A.31FA2CF2@haertig.com>
Source record: 21550

By convention in FCC matters, when a station shares call letters with another station in a different service, the service designation is appended to the call letters with a hyphen. For example when there were both a WNEW AM station and FM station, the calls would be WNEW-AM and WNEW-FM. However, when the call letters are unique to the station, the service designation is appended with parentheses. For example, it is now WNEW(FM).

As for legal ID's, there is no FCC requirement (nor has there been one in the last 30 years that I can remember) to include the service designator in the call.

Thanks everyone for your help so far.

As you say it would appear that the only LA station running 'John and Jeff' is KLSX-FM on 97.1 mHz. This has also been confirmed by 'John' of 'John and Jeff' who I contacted by email. I checked the KLSX schedule which states that the J and J Show starts at 11 pm weekdays - which would fit in with what I heard.

I have also checked my own logs which show "John and Jeff Show" at 0756 UTC on 4 December.

It looks therefore that rather than hearing an 'exotic' West Coast station I was probably hearing a rebroadcast from the East Coast - but it's still a mystery I would like to solve.

I would be grateful for anyone in the LA area who could check 97.1 from 11.35-11.50 pm weekdays to see what is being broadcast especially the adverts:

I heard 3 ads in total

Spa at South Coast Plaza - fitness center
Sword Medical Center for Hair Replacement
an ad for a website - visualtrends.com

The three stations I do occasionally hear on 1590 are WSMN Nashua NH, WARV Warwick RI and WAKR Akron OH. 0735-0750 UTC weekdays is a rather difficult time to monitor.....but if there are any insomniacs around....

>

There ARE stations who will grab the dollar of some "Mom and Pop" who go for
the low-ball price, figuring they'll never see them again anyway. Plus,
there are
"all night" places, taxi services, donut shops, who wish to REACH people at
that hour....and there are also "Per Inquiry" ads that will pay a reduced rate
based on how many people respond to the ad (for record clubs, subscriptions to
magazines, etc.)

This sounds quite promising. But remember, it won't last long.
As soon as the FCC decides to allow or require IBOC, FM
radio will cease to work as we know it. 100 watts will be
overcome by the IBOC carriers of the adjacent channel
station in the next galaxy!

Hi Paul,

I was surprised at first, to see your report of receiving a US West coast class B station in Scotland at night. I had assumed that class B stations on the West coast dumped most of their power out over the Pacific ocean, and the direction toward Scotland would be in a deep null. While this may be a good general rule, and is exactly what the KNUX daytime pattern does. Upon checking, I found that the KNUX night time pattern adds a tail on the pattern to the East, at a bearing of 45 degrees. This tail has the full field strength of a 5 kW station. Checking my Globe with a piece of twine, sorry I don't have a computer program for this, I see that the bearing from LA to Scotland isn't too far off 45 degrees, perhaps slightly further north, but close, so the reception of this west coast station isn't too surprising after all.

The other stations on 1590 you report in a later post, WSMN, WARV, and WAKR also have night time directional patterns that favor Scotland. WSMN and WAKR both have their major lobes directed at Scotland. While WAKR's major lobe is not directed towards Scotland, it looks like Scotland is

just barely included in the major lobe.

So these stations all look like reasonable candidates for night time reception in Scotland, with KNUX having an unusual pattern for a West coast station.

Regards,

John Byrns

> Rodger had in fact favored the 1000-watt LPFMs and commercial operation.

Actually, he favored 3000 watts "LPFM" stations, which was basically nothing more than a class A FM station. So far as I can tell, almost no other LPFM advocates agreed with him on this, with the majority supporting a power level of somewhere around the 100 watts the FCC will apparently choose to allow.

> I didn't see any way that a commercial LPFM service could
> avoid auctions. (I know Rodger disagrees with me. He failed to change
> my mind<g>.)

The way that it could have been done would be for the FCC to only accept LPFM applications on a first come, first serve basis. Since competing applications would not be accepted, auctions would not be necessary. I supported this proposal for LPFM -- Rodger Skinner (to the best of my knowledge) did not, preferring lotteries (which the FCC lacks legal authority to conduct). It's a dead issue since the FCC will apparently only allow non-comm operation of LPFM stations.

If one looks at the directional patterns, they'll often find that highly-directional stations beam all their power out to sea or across the border into Canada at the nearest point... After all, if you're running 5,000 watts & not being heard 20 miles away, well, that power has to be going *somewhere*!

Groove Radio On The Net Today!

As mentioned in the Dance messageboards and now, finally, also in the Los Angeles Times this past Monday, the little dance station that doesn't deserve to play dead returns this Tuesday, but not over the airwaves.

Groove Radio 103.1 (KACD/KBCD) brought electronic, house, disco, and other branches of dance music to your radio from 1996 until 1998 when Jacor (now Clear Channel) bought the money-losing station and turned it into Channel 103.1 adult album alternative.

Now that many people have found better music to listen to over the Internet, bypassing local radio altogether at least in your homes, Groove Radio has become the latest concept to join the streaming audio revolution being broadcast on the Internet.

Groove Radio station founder Egil Aalvik, known to radio listeners as Swedish Egil, relaunched Groove Radio at http://www.grooveradio.com.

"There is an influential audience that has been underserved and is hungry for electronic dance music," he said.

In addition to streaming music 24 hours a day, the site will include video broadcasting, music distribution and e-commerce.

Egil is also known in the Los Angeles market for his music programming duties at KROQ 106.7 playing alternative rock, and MARS 103.1 (the duo now known as KACD Santa Monica, KBCD Newport Beach) from 1991-92. He owned KACD/KBCD 103.1 Groove Radio from 1996-97 when he sold the station to another owner, who experimented with a 24-hour torture of The Spice Girls and an ill-received CHR R&B format before launching Groove Radio's successor known as Groove Radio from Sep 1997 until Oct 1998. You can hear the dance music once again beginning Tuesday on 01/11/00 (decimal, but it looks binary, more about binary dates in this issue) at http://www.grooveradio.com

Thanks to Rodger for posting the information on rec.radio.broadcasting
---

Planet-FM Suggestion Line

103.7 The Planet has recently launched a voice mail for suggestions and comments about its radio station in San Diego.

1-858-467-4123 is the phone number.

Automated Radio Playlist Nightmares

On Christmas Day, Sets 102.1 broadcasted dead air for some two hours. I noticed it all right as I was driving to Orange.

On Jan 9, Star 100.7 reran Jagger and Kristi's Top 20 of 1999 from the week before.

Gross Milestone

Jerry Gross' sports interview show celebrates its one-year anniversary this month on KPRZ 1210 and KCBQ 1170 Saturdays from 5-6pm.

Strikes Four and Five for XTRA

Since Jim Rome's show on XTRA 690 moved from live at 9am to tape at 1pm, so as to not be on at the same time as it's low-rated Los Angeles airing on 1150, listeners in San Diego either got a live breaking story...twice...if it aired during Rome's show, or not until 4pm if a breaking story was in the middle of Rome's taped replay on XTRA.

The former applies to this item...twice...courtesy of Jay Posner, TV-Radio columnist on the Friday North County Times.

Listeners on XTRA 690 were able to hear the Bill Belichick and Mike Ditka stories break twice this week...live with Steve Hartman and Bill Werndl, and four hours later with Rome.

Okay, Clear Channel, we San Diegans' had enough of this. Demand to XTRA they put Rome back on live by calling their station at once.

Radio Celebrity Birthdays

I don't do this feature much in this column, but radio personality rivals Rush Limbaugh and Howard Stern both have January 12th as their day of birth. Think about it.

Planet 103.7 Chop Shop

Star 100.7 has been the sole franchise that specializes in playing hacked-up hits since 1997, up until now.

Planet 103.7 has just opened its own competeting song chop shop just this past year.

Here's the first two entries in the Planet 103.7 Chop Shop:

"Peace of Mind", by Boston. Listen to KLOS, KGB, or better yet, buy the album to hear the whole song!

"Take the Long Way Home", by Supertramp

Star 100.7 Chop Shop

"Ray of Light" by Madonna. Galaxy 91.7-FM played the full version of her song and it sounds fantastic!

Heard on 107.3 XHFG...

"Shake Your Bon Bon", by Ricky Martin...in English! Couldn't they get a Spanish version of his song?

Jeers to KFMB-8

They never rescheduled the "All in the Family" report that was airing in the Jan 8/9 weekend edition of "Entertainment Tonight". I taped every spot it might have appearred on, but apparently, the KFMB-8 folks thought that viewers preferred to watch paid announcements instead.

The Saturdays 7-8pm timeslot had the "St. Jude Children's Hospital" special instead in "Entertainment Tonight"'s time slot.

I do find these hourlong TV tributes interesting to watch.

Off Topic: Binary Dates

The first day of the hundreds (Jan 1, 2000) had this date layout: 01.01.00, or 00.01.01 if you prefer to place the year first, meaning that the date looks like a binary date.

This week, we have 01.10.00 (00.01.10) followed by 01.11.00 (00.01.11).

In October, look forward to 10.01.00, 10.10.00, and 10.11.00; the following month, enjoy 11.01.00, 11.10.00, and 11.11.00

Next year also has a bunch of binary dates: 01.01.01, 01.10.01, 01.11.01, 10.01.01, 10.10.01, 10.11.01, 11.01.01, 11.10.01, 11.11.01.

The years 2010 and 2011 round out the binary dates:

01.01.10, 01.10.10, 01.11.10, 10.01.10, 10.10.10, 10.11.10, 11.01.10, 11.10.10, 11.11.10, 01.01.11, 01.10.11, 01.11.11, 10.01.11, 10.10.11, 10.11.11, 11.01.11, 11.10.11, 11.11.11.

And for the final binary treatment, the last day of the hundreds, 12.31.99, may be written in binary like this: 1100.11111.110011!

Suggestion. Get a new email address and use it just for this group. Have it forward to a real address. If it gets harvested, delete it and start over with a new one. (The machine name in my headers is a name used only for this group for that exact reason.)

Rock-it Radio listeners club - http://www.rockitradio.net

Well just as promised we have the great pleasure of having the First
Memory Lane show here on Rock-it Radio. It's show #133 and is truly an
excellent mix of those Rare oldies that we pride ourselves on here at
Rock-it Radio. To listen to these shows all you have to do is
simply go to our archives page at:
http://www.palmsradio.com/rockittext.htm and then click to show #133.

If you have real player it should come up.... if you don't-- well
you can get one for free at http://www.real.com

In the mean time here is the description and playlist of show #133.
(remember you can get all of our shows playlists at
http://www.palmsradio.com/playlistmain.html)

On this Memory Lane Show, we feature a variety of 50's and early 60's
rock,
r&b, rockabilly and doo-wop. We also answer a listener request, and
host
Lane Quigley pays tribute to three great artists who passed away in
December
(Don "Sugarcane" Harris of Don & Dewey; Curtis Mayfield of the
Impressions;
and Zeke Carey of the Flamingos).

MEMORY LANE SHOW - PLAYLIST

1. Keep Your Feet on the Floor - Jewels
2. Hand Clapping - Red Prysock
3. The Shake - Standells
4. Ding Dong Darling - Carter Rays
5. Ooo Baby - Sanford Clark
6. Over and Over - Bobby Day
7. Billy Boy - Teen Queens
8. That's All I Want - Johnny Preston
9. Dreamy Eyes - Youngsters
10. Sweet Girl - Squires
11. Heart Attack - Don & Dewey
12. You Must Believe Me - Impressions
13. You Baby You - Excellents
14. Rock This Joint - Bill Haley and The Comets
15. Beavershot - Hollywood Hurricanes
16. Baby Please Come Home - Lloyd Price
17. Hot Little Mama - Johnny "Guitar" Watson
18. Six Months Three Weeks Two Days and an Hour - The Sharps

19. Sick and Tired - Chris Kenner
20. Language of Love - John D. Loudermilk
21. I Want a Bow-Legged Woman - Bullmoose Jackson
22. Baby Blue - Gene Vincent & His Blue Caps
23. I've Given All My Love - Patti Austin
24. Route 16 - Nolan Strong & The Diablos
25. Raunchy - Bill Justis
26. Humphrey The Camel - Jack Blanchard & Misty Morgan
27. Cherry Pie - Marvin & Johnny
28. Something's Got A Hold On Me - Etta James
29. Long Black Hearse - Cliff Gleaves
30. Remember Then - Earls
31. Buzz Buzz A Diddle It - Freddie Cannon
32. Golden Teardrops - Flamingos

Remember Rock-it Radio likes to take requests and dedications so if there
is a special song you want to send to someone over the internet, or a song
you haven't heard in a long long time -- write to us at
Rockitradio@earthlink.net and we will do our best to get it on the next
Rock-it show!

All the best,

Bennie Dingo

The first thing to try in any case is "www.[station's call letters].com".
In this case, www.wnri.com. It works, although the setup of the web site is
a bit strange. Unfortunately, the absolute prerequisite to listening to a
radio station is that they have a streaming netcast for you to listen to;
WNRI apparently does not.

(Note: If you're looking for a non-commercial station, try
"www.[station's call letters].org".)

To look for a station on the 'net, you could also try
http://dir.yahoo.com/News_and_Media/Internet_Broadcasts/
Entering WNRI in Yahoo's search engine brings up a different web page, but
still no netcast.

If you still want to search the 'net some more, try
http://www.comfm.fr/radio/indexa.php3

Once you find a station with a netcast, if they have a decent web site
they'll have instructions there telling you how you can listen to them.

Nothing very special. Receiver is an AOR AR7030. At the moment I'm using an ALA1530 amplified loop (from Wellbrook Communications) which is outside at ground level on a rotator. Until this winter I used a home-made loop indoors without much discernible difference in signal strength - however the outside loop cuts down considerably on electrical mush. I should add that on the home made loop I made a lot of use of the AOR's built-in amplifier which does an excellent job.

I would go for Wellbrook's K9AY if I had a free choice, however.

I'm considerably further north than you, which helps; and I'm only half a mile from the sea.

This might be of some interest to North American readers, but I reckon the 10 most reliable NA stations here are:

590 VOCM
800 VOWR
930 CJYQ
1130 WBBR
1400 CBG
1500 WTOP
1510 WNRB
1520 WWKB
1560 WQEW
1660 WWRU

CJYQ and WBBR are my two 'beacons' and I always listen out for them as
a guide to conditions.

Lately, the the local bus system has been featuring ads that say: "Listen and Win" - WRLB.

Trouble is, I tried to find the station and can't. I even went to the FCC website and didn't even find so much as a call-letter change application using these call letters.

Anyone have any info on this?

Not exactly. Only Norm Hitzges (sp?) is moving to the 10 AM to noon time slot. A couple of others are 'maybe'. Leon Simon says he was a barber prior to his stint on Norm's show, but is undecided whether he'll go back to that avocation. This story was in the Star-Telegram.

ralph, WNRI has a web page www.wnri.com but it does not offer, nor do any of
our stations, a live feed. All of our syndicated shows offer their own
network feed, in particular Radio America and TRN, so enjoy those shows
anywhere on the internet by listening to thte network, on Broadcast.com.

Thanks for writing....

Hello,
I am looking for a Music Scheduling option thats under 600$. I need
something that will interface with BSI's Wavestation and possibly other
automation systems. I want a buy out, no leases as I am looking at using
this software for non-commerical uses.

Thanks for any sugetsions, I looked and did some searches on Yahoo, Lycos
etc and couldn't come up with anything valuable.

Hi Matt! The traffic and music scheduling software from Natural Log and Natural Music is excellent. I have used the traffic system at my stations, and am setting up a station now with Natural Music. It does all the Selector-style stuff without their ridiculous monthly fees. You can find this software on the BSI website.
Best musical success, Don Davis

> charge in order to give "added value" to clients who went into sticker shock
> over the asking price for their schedule of daytime commercials.

absolutely agree with your comments and have good news for owners, managers, sales managers and reps. overnight works well.

In our market we have several stations who have FULL overnight schedules with people PAYING to be there. many people work at night, and listen to radio while they work. They generally are above average earners [that why they work at night] and they buy big ticket stuff because they can. Holidays, Cars, Houses, Furniture Carpet Appliances, same old stuff..

better rates means cost for result is in favour of the client.

the programmes aren't so full of distractions either. the environment makes a lot of difference.

Night time is good for similar reasons.

Doesn't work on stations where listeners have to be in bed by 8:30-10:30 because they have school tomorrow..

It does work on stations who have programming that is live at these times.

We have developed night and overnight sales because we have some agency buyers who look at ENVIRONMENT when they place ads as much as Audience, and we have a few salespeople who have been broadcasters and can sell these times and show buyers how to get a response.

Funny thing is there has been no concerted effort, just a few people who have picked up on the potential. I am happy to be one of them!

We have one car account who buys mid dawn on a 50+ talk format because these listeners trust the companies who stay with them. You don't need huge frequency, but you do need to be there for a while.

Source record: 21358

>Is anyone looking (or know of anyone looking for) a talented News/Music
>presenter?

Lyndon, there's always work for someone with talent in medium and large markets around the US. One smaller problem, though, and another bigger one, may be in your way.
The smaller one is money. Even in large markets of a million or more population, the pay isn't always the greatest. You might find the money you're offered to be disappointing. (Don't know how much UK radio pays, so I don't know how it compares.)
The bigger problem will be with the Immigration and Naturalization Service. Unless you double as an actor specializing in portraying British characters, or have an act that is unique, you may have trouble getting permission to move here, and live and work here, legally. Like any other major industrial country, the US limits legal immigration to those whose skills are unique and in short supply...unless you have immediate family already living here as legal residents or naturalized citizens. There are a lot of US citizens already competing for every on-air post in good sized markets, so you'll have a problem convincing the INS to grant you a work visa and/or green card, regardless of the talent and experience you offer. A US or Canadian position isn't impossible, but in your situation it's probaby easier to land a position in a major British market like London or Birmingham, or a major market elsewhere in the EC which has an English language programming outlet (Dublin's probably the fastest growing market in Europe, and worth a try).
Actually, a lot of US radio is becoming less creative and more formulized and corporate. I've visited your country several times in the last few years, and the broadcast scene in the UK and Ireland impressed me as more dynamic and creative than what's happening here right now. You may be happier staying home and moving up in market size where you are.
I wish you well, Lyndon.

>with respect, i hope lpfm goes down.......not necessary....

Mixed emotions about this. Like most folks on this board, I don't see LPFM as a solution to one of radio's biggest problems today---its growing disconnection from the communities it nominally serves. But that doesn't mean the problem itself can't be addressed by the FCC in a different way. I just don't think the Feds will have the guts to do it.
Let's face it; LPFM is a non-starter in most large markets. The FM band is so overcrowded with stations in any market of 300,000 or more that there is nowhere to squeeze any more stations in. Since the whole purpose of LPFM is to increase the number of truly local voices, and offer an alternative to corporate, satellite-fed and voice-tracked radio, it's going to be an empty gesture if it ever gets a nominal OK from the FCC.
The only meaningful things the FCC could do, within its power, would be either to rachet down the number of stations a company can own in a market and force the mega-groups to divest some stations...or impose local content rules and minimum news/public affairs quotas as a condition of license. They have the power to do both, even under the 1996 laws. My guess is, they won't do either one. They identify so much with the industry they "regulate" that they've abdicated their responsibility long ago.
LPFM is not necessary because it can't accomplish its goal. The goal itself is necessary, but the FCC won't take action on program service requirements or diversity of ownership, which are the real solutions.

The only WRLB on file right now is at 95.3FM in Rainelle WV.

Given that your ISP is HQed in Ohio, I'd guess you mean Columbus Ohio? That
would be a hell of a rimshot.

I have a few different e-mail accounts, including Deja.com and MailCity
(both run by Lycos) and Hotmail. I only check MailCity and Hotmail
about once a week--neither "advertised" in public: I'm lucky to get one
or two messages in MailCity, but usually 20-25 in Hotmail and, except
maybe for one or two, ALL SPAM.
A lot has to do with the account!

As an engineer, I welcome the money I would make building and working the low power FMs, but I have to agree with you on the problem not being solved this way. I work for one of the "big guys" and in our market there are plenty of stations, just not enough owners. Although I understand the reasoning behind the consolidation, I do not necessarily agree with it. I think it hurts true radio. There should be more competition for the local dollars, making it necessary to do more local things to attract those dollars. Personally, I believe that LPFM will not be a good thing, something like the old cliche' of putting out a burning building with one single water hose.

159. Live Ca$h?

Newsgroup: rec.radio.broadcasting
Date: 2000-01-13 00:00:00 UTC
From: Kaimbridge <kaimbridge@my-deja.com>
Message-ID: <85kjq0smm1@nnrp1.deja.com>
Source record: 21365
Cross-posted to: rec.radio.broadcasting,alt.radio.broadcasting

I understand how Ca$h can trim and manipulate time with *recorded*
programming, but HOW--other than for brief bleeping/dumping--can it do
it to LIVE programming, since the host is breaking live--or can the
machine jump ahead of the host <grin>?!?
Or, is this another typical distortion/misreporting by the media and
Ca$h only *does* work on prerecorded material?

It's very simple. It's placed somewhere in the audio chain after the
show has been mixed and before the transmitter. It digitally captures
the audio, removes periods of silence. Its output is fed to another
studio or mixer where additional commercials are added. Then off to
the transmitter.

The unit sees no difference between live audio and tape.

Matt,

How long ago did you send it? Some companues don't always check e-mail as fast as they should. <g>

I believe the ballpark price for MusicMaster is $1,800 and the ballpark price for MusicMasterLT is around $400.

Give them a call...

162. Testing in a normal Usenet group is extremely rude

Newsgroup: rec.radio.broadcasting
Date: 2000-01-13 00:00:00 UTC
From: Norm Katuna <normk2@hotmail.com>
Message-ID: <ei0s7sgkt03bvrjucri5m6qaisklv27vf0@4ax.com>
Source record: 21368

This probably won't win me friends with some people around here, but I've have seen too many of these over the last few weeks.

"You do not" post test messages to regular groups. It is extremely rude. Not only are the off-topic, but they waste space, maybe not a lot, but they do take up space.

This is going to be one of the major drawbacks to robomoderation vs full moderation in this group.

You post test messages to a group that is aptly named: alt.test

I know that this group being moderated makes things a little different in the way things show up, but that still does not take away from the fact that this is not the place to practice or to check to see if your post made it by sending a test post.

What you need to do is make up a regular on-topic post to this group, or a response to someone else, and just post it. If it shows up, it shows up, if not, then you have to find out why, but please don't keep test posting here.

I "may" be wrong on this but when I was here during full moderation I don't remember "ever" seeing a test post to this group.

If that is true, it is because the moderator knew that this was not something to be allowed in this group and did not post them to the group.

But now that there is no full moderator, little things like this are starting to creep through.

One more thing. Just because a post shows up on your ISPs server, does not mean that it made out here to the real world. Things like that happen where it looks like your post got posted because you see it on your native server, but in fact it never got out.

That still doesn't make sense.
Let's say we have a live program segment from :06:30 to :17:00.
And, let's say the gasbag is a real "airhead", where :01:33 of dead air
can be squeezed out of that segment: In order to take that extra minute
and 33 seconds, the show will have to break at :15:27, but the segment
isn't supposed to break until :17:00--so, does it break early, or what?
If so, what about the automation cues at local stations? As for the
host and/or board op, do all the studio clocks creep ahead too, so that
:15:27 reads :17:00?

I am heartsick to report the death of Southern California rock radio legend John Leslie, a well known presence in San Diego's FM wars over three decades... ending with the evening shift on KGB-FM.

The circumstances of his death are truly dismal. He was only 47. And if you hear the details from some other source I ask that you temper that horrible impression with a simple request, to remember those who heard him knew John as a one who truly believed in the potential of an immediate and intimate medium, and proved its power daily.

Bob's advice is rock solid. There is however one place where your name would represent a unique qualification that could possibly get your employer to support your claim with Immigration on the basis of radio performance alone. I refer to KLBJ-FM in Austin Texas, the station named after the former President whose name you share.

This baffled me at first, too. The New York Times actually ran a story on this a week ago. You give it a headstart, so that instead of running Rush at, say, :05, Ca$h will start recording the show at :05, while you run another spot. At :06, you start the playback, and slowly chops samples out, depleting up to a minute of silence, parts of long vowels, etc.

not if you have found the guys with something to sell at that time and sold
them on the immediacy of radio.

This year this market [about 30 stations] was tolerably full with sale
promotions December 26 thru Jan 4. Not just one company there were several.
I spent a lot of time loading the spots in the week before Christmas because
the engineer was sick!

And that's the rep house stuff. We sold a lot of local too! City wide some
of us older dudes just don't buy in to that budget stuff..

Furniture Carpet Appliances, the family that shops together...

sorry sounds like preaching

>slowly chops samples
>out, depleting up to a minute of silence, parts of long vowels, etc.

I'm surprised they went to this complicated an algorithm to achieve their goal. TV has used "time compression" for many years now, and while it normally renders a show unwatchable (IMO) the damage is done mainly to the image; the sound seems to process pretty well. I suppose that Ca$h can achieve greater time gains with less audibility. I wonder how often I've listened to it without realizing.

This next is not a general complaint about the engineering on WOR, but I do recall some strange occasional glitches on Dr. Joy Browne's show. Hmmm... (See, now I'll be wondering every time something hiccups.)

please...

Seriously Norm what you need is a Usnet/Newsgriup reader with filtering
controls so that you can filter out all posts with the word "test" in the
subject line.

That would stop you from seeing this so called clutter.

More Radio News:
http://www.geocities.com/SunsetStrip/4656/03lnk005.htm
More links at the bottom of the page!

Join the San Diego Radio Mailing List

On my Southern California Radio website, I quietly placed a link to a mailing list where the discussion format is as follows:

"Talking about San Diego Radio stations plus TV such as personalities, formats, sales, playlists, ratings, DXing, Internet-only and college, as well as neighboring L.A. and other nearby stations and nighttime AM stations many SD folks can get on their radios."

There are currently 12 members online, but the mailing list needs more members.

Membership is free and is designed for all radio folks (fans or employees) whether they like the medium or not.

Feel free to join it at this location:
http://www.geocities.com/SunsetStrip/4656/03mailer.htm

John Leslie Dead at 47

John Leslie (1952-2000), a veteran disc jockey famous for his shifts at KGB-FM, was found dead January 11th in the shower of his home as John Fox of Radio Digest San Diego reported in an e-mail. John was 47.

Fox also adds he has been dead about a week. Friends say John had been drinking heavily since being fired from KGB last summer.

John's final shift at KGB-FM last summer was the evening shift from about 7pm-MID, now taken by jock Todd Kelly.

John's death devastated the staff at KGB, where morning host Dave Rickards and afternoon host Coe Lewis both aired emotional tributes to him.

John worked at KGB, the late KUPR (95-96 now Mix), and the defunct classic rock clone KCLX 102.9 (89-94, now K-Love) at various times.

But due to personal problems. John was fired at his job by the heartless suits at KGB last summer. No word whether he was trying to find another radio job locally, but with classic rock nipping at the Social Security crowd, and his longtime association with Classic Rock period piece music, Leslie could have considered moving to another city where there was a better job available. Unfortunately, with out-of-town suits running the San Diego stations, the local stations are fast becoming the equilvalent of automatic computerized programming, or Prophetization, meaning there are fewer live jock jobs available for fewer time slots while the automation takes over the early morning and weekend shifts for the most part.

Randy Dotinga of the North County Times adds that John, a native of Escondido, also was an extraordinary lover of music, a "walking dictionary" of a disc jockey.

Sources include Radio Digest: San Diego: http://www.radiodigest.com/san_diego/index.htm and North County Times-Randy Dotinga: http://www.nctimes.com/preview/radio.html -- San Diego Radio Static by Randy Dotinga from the North County Times (NOT the San Diego Union aka The Evil Empire)

Full Frequency Returns to KIIS-FM

"Full Frequency", the Los Angeles-based local dance music show hosted by Christian B., is returing to KIIS-FM Friday night/Sat morn at 1am Pacific Time after a three week hiatus.

Simon Clarke posted in the Southern California Dance Messageboard the news. No other details about why the show was off three weeks was given.

You can hear "Full Frequency" live on the Internet at http://www.kiisfm.com

I'm with Norm on this one. And yes, I have heard of, and used "alt.test".

>:15:27 reads :17:00?

This is done at the local station. A network wouldn't use such a thing
because it's contracted for a specific number of network commercials.
It can't add more without the station's consent.

Since the unit is at the station, the automation cues are simply
changed to trigger at 15:27 and the remaining time is filled with
extra commercials. Very simple to do. That can be true of live assist
with local programming or total automation with network.

There aren't any gasbags in talk radio. Those pauses are for dramatic
effect.

>(See, now I'll be wondering every time something hiccups.)

Every show has glitches every once in a while. I can tell you that WOR
absoultely, positively DOES NOT use this unit. I can't imagine our
company allowing such a thing.

We're actually a company of programmers. Increasing spot loads in
markets with a large number of competing owners would put the station
that uses it at a serious ratings disadvantage. It hasn't been in use
long enough to establish a trend to show it's effect, but the greenest
programmer knows heavy spot loads don't lead to great ratings.

I was very upset to see WABC remove their unit.

My comment was meant to reflect my own mental processes, considering that I don't know what the Ca$h unit sounds like. But I did pick WOR as an example because I knew you'd be here to defend the station. :) No harm intended. WOR probably wouldn't have a button on my car radio if you did do such things. I agree that editing the pauses and such would destroy the natural pace and cadence of the speaker.

(My comment about the audio surviving TV time compression was poorly worded. There may be no obvious burbles that indicate processing, but those actors never talked like that any more than they moved like that.)

Considering Eric's example and the fact that I am always on the lookout for stupid station tricks, if I was still listening to Rush and the local talker didn't start playing his show on time, I'd be down the dial to one of the 5 other stations carrying his show before their extra commercial even registered with me. Seems like the unit could be very risky, like you suggest.

I have. There are plenty of test groups thoughout the Usenet hierarchy. (I stopped counting at 100 and I was still in the Fs.) Even private news rings will have a test group set up. Some are even monitored so that you will get an email confirmation of your test. It's simple courtesy _and_ efficiency to use these things as intended.

Today I noticed 12 stations in L.A. not transmitting the stereo pilot tone.
They included KLAC, KFI, KFWB, & KRLA. (Note: absence of the pilot tone means
nothing in itself since its only function is to turn on the stereo indicator on
the receiver -- as I recall it was 25 Hz at 5% modulation.)==Ted Shireman

Visit http://www.radiodigest.com/ and click on columbus read the latest
one at the top, it talks about the sighting of this on many COTA busses,
No word on really what it refers to though, COTA wouldnt tell the author
of the Columbus Radio Digest anything....

I pick up WKYG 1230 Parkersburg WV in Columbus, after nulling out our own
WFII 1230. I was searching out who was about 200Hz low on the frequency
that day. This was back when WFII had decent programming and so it mattered.

It's my undersatnding though that if a syndicator found out a station was using this device... I remeber RUSH commenting on this awhile back.. That it would be in violation of the Contract between the syndicator and the station that carries the content. Just as rush has only 4 mins of commercials an hour and cant add more.. the local affificate is limited to what set in their contract too which is the XX amount set (I cant remeber, its been a while since i've board op'ed a Rush Show).

The (former) KDIA case is puzzling. Gabbert engineered a first-rate stereo signal there. Disney is stereo in some cities, but not here. The station at 1510 (whatever it is now) last time I checked lit the stereo indicator, but sounded mono. I think the religious station (from the valley) at 770 lights the indicator, too, but I have never listened when they have music so can't say if they are stereo. The EB station in Vallejo (1640) is mandated to be stereo, but they are doing Catholic talk so what's the point?

KABL, BTW, sounds great when they are playing stereo material.

190. 3rd Annual Homelessness Marathon

Newsgroup: rec.radio.broadcasting
Date: 2000-01-14 00:00:00 UTC
From: Paul Riismandel <weft-radio@usa.net>
Message-ID: <387E8861.CADE8486@usa.net>
Source record: 21396

The fourteen-hour Homelessness Marathon, broadcast live
from the streets of Champaign, IL, features the voices and
stories of homeless persons from Champaign-Urbana and
around the U.S., hosted by "Nobody" (Jeremy Weir Alderson).

The marathon is not a fund-raising event, but a consciousness raising
event; a national teach-in on issues of homelessness and poverty,
featuring experts, call-ins, and above all, the voices of homeless
people.
The marathon isn't about charity or do-gooderism. It's about respecting
the rights of our fellow citizens and the urgency of changing our
national
priorities.

The Marathon will feature a variety of live guests from across
the nation speaking on issues related to homelessness,
along with live call-ins from homeless people via a nationwide
toll-free number.

The marathon is hosted this year by community radio station
WEFT in Champaign-Urbana, IL--home of the University of
Illinois and countless persons who don't have homes--in
cooperation with WEOS in Geneva, NY.

Stations who have signed on to carry the marathon this year include:
WEFT, Champaign, IL; WILL-AM, Urbana, IL; WEOS, Geneva, NY;
WORT, Madison, WI; KMUD, Redway, CA; KBOO, Portland, OR;
Radio For Peace International, Costa Rica; WDBX, Carbondale, IL;
WVAS, Montgomery, AL; KCBX, San Luis Obispo, CA;
KGNU, Boulder, CA

Encourage your local Public or Community Radio Station to
carry some or all of the Homelessness Marathon, from 7:00
p.m. EST Jan. 25 to 9:00 a.m. EST Jan. 26, 2000.

The Third Annual Homelessness Marathon is available for
free to all noncommercial stations via the Public Radio
Satellite System (Channel A67.7 mono).

For more information about the Homelessness Marathon,
including the broadcast schedule, press release and how to
hear or carry the Marathon, go to our web page at
http://www.prairienet.org/weft/homeless/

A little addendum to all this.

I was talking to Steve Propes on the phone today about all this and he had a little story for me about my last paragraph. This also is going out to all the people that just told me to ignore or filter these out.

Steve told me that either a relative or close friend was helping him with his computer a while back and this guy decided to post a test post. Guess where he sent it? That's right, right here.

Steve told me that Bill was still with us then and he returned the test message back to Steve's address with a note saying that test messages to regular groups were not good things to do.

So, if they should just be ignored around here and they are no big deal, then why didn't Bill just let them through?

Why, because they are a big deal.

Now from a FAQ that I dug up in 1998 when I was trying to find out the right ways to do things on the Usenet.

This came from a portion of a FAQ from news.groups.questions and is for newbies:

-From: ftp://garbo.uwasa.fi/pc/link/tsfaqn.zip Frequently Asked Questions
-Subject: Where to put test postings

17. *****
Q: Where to put test postings?

A: Let me try to give hopefully helpful information about how best go about making test postings. Please don't take offense by this item. It is solely meant as friendly guidance so that you can better find your way on the net.
Novice users, and sometimes even others, occasionally place these "A test, please ignore" messages in discussion newsgroups. Please don't do this. It is wasteful of the resources. These news reach tens of thousands of readers, so a very wide distribution is involved. Furthermore, many users find the test messages very annoying in the discussion newsgroups, and you have a good chance of getting some testy email.
There is a much better solution for the testing. There are special test newsgroups just for this purpose, such as alt.test and misc.test. The misc.test is a good option, since there are several test echoes along the feed. They will automatically send you email acknowledgements when your test posting reaches these sites.

193. DJ's on record

Newsgroup: rec.radio.broadcasting
Date: 2000-01-15 00:00:00 UTC
From: Norm Katuna <normk2@hotmail.com>
Message-ID: <cm108scqu37orpl7tvaclsu505jf1neo7q@4ax.com>
Source record: 21399

This is one of those retro things that I mentioned a while back. A lot of the younger people "might not" know what I'm talking about here, but a lot of the old-timers should.

Again, I collect 50s and 60s original 45s and do have some of these types of records.

Disc Jockeys used to appear on records, mostly either singing or doing a monolog of some sorts.

These could be local for just the listeners of a certain station or they could be done on a national label and have wide distribution and could even have become a hit of sorts.

What I am talking about here is 45s with the actual D.J.s on them.

I'd like to find out if this was bigger than I'm thinking it was. Did almost every area have a D.J. that tried his hand at being on record?

Here are some I can think of, and I do have most of these in my collection. Some are huge names and some are just local.

Also, if anybody can fill in the station that these guys were on when they recorded these, it would be appreciated, but I'm not expecting much with that.

Alan Freed--- Rock 'n Roll boogie on Coral. He also appeared with Steve Allen and Al Jazzbo Collins on Coral doing a break-in called "Space Man"

J. P. Richardson (Big Bopper) had a few on Mercury, the biggest being "Chantilly Lace"

Wink Martindale had a few on Dot with the biggest being "Deck Of Cards"

Art Roberts--I guess he was on WLS, but when this came out he was somewhere else, I think. He had a Zacherle type novelty called "Terrible Ivan" on Imperial.

Ira Cook---Had one on Imperial called "What is a boy"

Bob Arbogast appeared with Stan Ross and did the classic "Chaos" on Liberty

Joey Reynolds with some body named Danny doing "Rats In My Room" on Swan

The Real Don Steele doing "Cecil the unwanted frenchfry" on Patches records

Ted Randall doing "What Is A Disc Jockey" on Verve

Lloyd Thaxton (not sure if he was on radio, but he had a local TV show) He had "Image Of A Surfer" on Capitol"

Clay Cole had "Twist Around the clock" on Imperial and I "think" he might have had something on Roulette.

Al Jazzbo Collins-- not only did he appear with Alan Freed, he had a few on Capitol and at least one kiddie record on Brunswick.

Murray The K-- I have some weird fan club record with him doing his shtick.

Jerry Blavat--I have something on the Favor label called "Discophonic Walk"

Magnificent Montague had something on Era in the late 50s

Red Blanchard did the Tarzan yells on Nervous Norvus's "Ape Call" and he also did two versions of "Captain Hideous" on Columbia

Jim Hawthorne-- he did something on Bingo records

Art Laboe--- The Pickwick Twist on his own label Original Sound

And lastly one of the more famous teams.

Hudson and Landry who had among other things "Ajax Liquor Store"

Anybody got any more, especially the more unknown strictly local D.J.s recordings.

Norm K

I don't have an AM Stereo receiver, but in Boston, WILD still (or did on
recent bumper stickers) promotes "1090 Stereo"...haven't heard the same
from any other AMs. Most are N/T, can't see them wasting valuable power
on stereo...

Eric

>TEDELM <tedelm@aol.com> had written:

Well Norm in-as-much as I agree that test messages on newsgroups are "wasteful of resources", I also believe EAS tests on radio and TV are wasteful. But even though you can't always ignore an EAS test message, tests posts to newsgroups "are" ignorable, minus having to read the subject line.

I know, I know... EAS Tests and Newsgroup Posting tests are two totally separate things, but The fact is that until (if ever) r.r.b. goes back to full moderation, tests and spams are subject to posting in robomoderated newsgroups.

One that I have in my collection is Dick Biondi's "On Top Of A Pizza"
which he recorded while he was at WLS in 1961.

I don't know if this fits your topic, but I found and bought two albums in a secondhand store by Country DJ Jay "Ole Jaybird" Drennan of WSLR 1350 in Akron, Ohio. He sang country-gospel songs, On at least one of the albums with the Cathedral Quartet Southern Gospel Group and the other one by himself. These appeared to have been made in the early 70's.The Cathedral Quartet recently retired after 36 years on the road. They became Nationally famous in Southern Gospel though they were strictly local at the time these records were made.

Kevin Black's Gold Solids LP

the best track the phone call to a guy in the mining department from KB
telling him he had been digging for gold in the back yard and had a 100ft
hole in the ground, the govt guy freaked when told there was no supports

all went on Radio Hauraki in the early 80

Mike Elliot & Bud laTour did "Rock me Jerry Lewis" Mid 80's. Think they
were in AZ at the time.

Wolfman Jack did an album of songs.

Alicia Bridges was a DJ when she had a hit with "I like the Night Life"

In the UK, Dave Lee Travis has a hit with "Convoy GB"

Also Robert W Morgan & Don Inus has a record out on RCA in the states of
one day when Inus visited KHJ and was on RWM's show.

I don't believe there are any contract provisions in any syndicated
contract I've ever seen that dictates the local spot load. Any station
that allowed a network or syndicator to dictate their
programming/sales policies is giving up control of their station.

An FCC directive in the 70's made it clear in the case of Schulke
Radio Productions, Ltd. that stations could not sign contracts that
gave the syndicator control over programming. They considered it an
abdication of the licensee's responsibilities.

He was first on my list, but then I decided to do the two biggies, Freed and The
Big Bopper first, and I forgot to go back and name him.

Lowe was also one of the few with multiple releases on a major label.

Green Door wasn't first. He had a former Dr. Demento favorite called "Close
The Door" almost a year before "Green Door".

In 1957, he also had 4 more Billboard Hot 100 chart records.

I also forgot one other from my list:

Tom Clay with his top 10 song from 1971 and "What the world needs now is
love/Abraham, Martin and John" on Mowest records.

Well Norm, great thread. Yes Murray the K had also The Lone Twister. WINS newsman and sometime DJ was on Dickie Goodman's Santa and the Satelites, Paul Sherman. As far as WMCA, the late Jack Spector was Vick Venus on Moon Flight in June 1969. I think Harry Harison had a record also.
Don Imus had 1200 Hamburgers to Go as well as some as you call them, "breakin records" such as Son of Checkers and a 1976 Presidential Debate record where he did impressions.
Alex Bennett goin as Jerry Bennett when he was in Houston did a John Glen question--and--answer record. Not sure, but maybe half of the non-Dicky Goodman spliceup records may have been done by DJS?
Of course versions of the 1974 The Americans as well as answer records such as Don Imus, The Russians.

I am sure that your intent was to honor and respect the memory of Mr.
Leslie, but the effect of this paragraph, at least upon me, is to so
greatly raise interest in the actual cause of death, that it could be
considered pandering.

On here, and on alt.radio.broadcasting, we've now heard about Mr.
Leslie's use of alcohol and that he was found in his shower several
days after his death.

Might I respectfully suggested that, since you've done such a good job
of piquing interest in the presumably sordid circumstances of his
death, that you post them yourself, in the most genteel manner
possible.

At this point, its fairly obvious that someone will post them; perhaps
you can write a description that faces this issue head on.

A brilliant record, which we played a few weeks back on the morning show. It had our news gal in tears -- she'd never heard it before.

Don't forget DJ Jimmy Drake, aka Nervous Norvus. He had two hits, the Demento classics "Transfusion" and "Ape Call". And of course, Rick Dees' "Disco Duck", a #1 hit, no less!

Plus Steve Dahl and Teenage Radiation's EP "Pet Fish Sticks", which included such tunes as "Chanks For The Memories (The Herpes Song)" and "I'm A Wimp"...

In 1973 Don Imus had a single on RCA titled "Son Of Checkers". It was a Dickie Goodman type with snips from other recordings. Wolfman Jack had a single on Wooden Nickel in 1972 titled "I Ain't Never Seen A White Man".
I noticed that no one mentioned Rick Dees' "Disco Duck", so I won't either.

I just bought a Dodge Ram and to my surprise it has an AM STEREO radio!
Scanning the dial from my southern CT vantage point I noticed WFAN, NYC, & WBZ, Boston light the "st" but broadcast all talk. WQUN Hamden, CT is stereo but the "Music Of Your Life" format. A station on Long Island on 540 kHz. has a similar format and sounds good in stereo. WICC, Bridgeport, an NT/AC format sounds good in stereo. But the best sounding AM stereo is WREF, Brookfield, CT. It is a daytime satellite repeater with an oldies format. They play a lot of stuff from the 60s with great separation. Too narrow of a selection for my tastes, though.
WTIC, Hartford, was originally Kahn stereo then switched to Motorola and has since switched back to mono.
WELI, New Haven was Kahn stereo but is now mono. They never switched to Motorola.
There are a number of "skip" signals at night that light the "st", but I can't remember which ones.

Not really. An LMA involves a licensee and an unrelated operator with
the licensee still responsible for everything that goes on.

Most Talk stations, for instance, contract with multiple networks and
syndicators. If each dictated the station's operation the licensee
would end up with conflicting contracts and responsibility while the
syndicator bore no responsibility.

Such as FM multipath causes difficulty on the outer fringes of a signal area, AM stereo can do the same, from what I understand. (I am sure some of the tech types who contribute to another radio mailing list I am on will give some feedback.) I've always had problems picking up WFAN at night despite its skywave here in Boston and I always assumed I had more trouble listening to 660 than any of the other NY 50,000-watt flamethrowers because WFAN broadcasts in stereo.

I'm going to jump in here with the observations I've had concerning Ca$hbox.

WIOD has had Ca$hbox for a period of time, now. WIOD runs Rush. Rush
normally starts at 12:06:00. WIOD starts Rush at 12:07:15. On January 3,
WFLA moved Dr. Laura from the 3-5pm to 9-11:30am - replacing Mark Larsen.
Since that day, Rush has been starting at 12:07:and change.

Originally, I did not mind hearing Rush start after the 12:06:00 time, since

I sometimes record his shows anyway, I listen to those shows in about 2
hours. But lately, there seems to be an unnatural digital speeding being
done to his voice that is making it obvious that the program is being
tampered with. Bouts of silence are still there, but the voice is speeded up

on WFLA. I would say at this point, they are just "playing with it" on WFLA.

The operation looks as though it operates like this: You would tell it when the program normally starts, when you want the program to start, how many breaks and how long each break is, and when the program ends. The computer then manipulates the amount of time to take off of the program to make it end at the time you have chosen.

It seems that on Rush, the way I can initially tell a station is using the unit is that "My City Is Gone" (The Pretender's song intro is Rush's opening) is sped up. Then I listen a little closer.

It sounds better on WIOD, probably because they have been using it longer. WIOD still fits my parameters of what I call a "sheep" station. WIOD is still a baad news station.

As your question implies, the answer is:
The FCC has effectively killed AM Stereo with their own brand of political incompetence. It has over 40 years of facts and qualifications to show for it. If you remember the question I posed before Pat went into the hospital, "AM Radio, Why is it still here?" was asked with that in mind. The FCC along with the independent technology advancements and AM Radio is still exists even despite the "turkey shoot."

Okay, I've got it: The whole, delayed started, segment is essentially
prerecorded, at least until the amount of time needing to be clipped is
clipped, bring it up to "live"--I (and probably others) have just been
looking at it bassackwards!
One legitimate (i.e., non-money grubbing) use I can see for this machine
is for heavy news days (e.g., "no school announcement" snow days).

And, in article <i8bu7s88p3r3onibnqok7q55qch8sj89ef@4ax.com>,
Rich Wood <richwood@commspec.com> wrote:

RW> This is done at the local station. A network wouldn't use such
RW> a thing because it's contracted for a specific number of
RW> network commercials.
RW> It can't add more without the station's consent.

One BIG--and rather ironic--problem I can see with this is the
compression of recorded, internal spots within a segment (e.g., such as
done on Art Bell's show): If an advertiser is paying a network for a
:30 spot and a station is squeezing it down to :26-:27, doesn't the
advertiser have a legit gripe?

>advertiser have a legit gripe?

Absolutely. Not only does an advertiser have a gripe about his spot
being shortened, he has a gripe about being the 9th spot in a 15 spot
cluster that negates its effectiveness and, ultimately, reduces the
audience he's being asked to pay for.

The first victim of this machine is the advertising agency. There
probably won't be any effective reaction for a while. The radio
advertising business is hotter than I've ever seen it. In major
markets it's a seller's market. If a client objects and pulls a
schedule, there are many waiting to take his place.

I excpect to see agencies taking steps to see there's no silence in
their spots. Maybe we'll start hearing 60Hz hum becoming a feature
rather than a bug.

Wasting signal to noise ratio is more like it. Why subject your signal to platform motion (swishing and swirling of the stereo image) in cases of co-channel interference? There's enough interference caused distortion of an AM signal that there's no need to add more to it. It's bad enough for a 50kw blowtorch at the low end of the dial, but death for a medium powered local channel at the high end of the dial.

WINS, New York, has had signal problems for years. When they used C-Quam stereo they were unlistenable many places I drive because of platform motion. Unfortunately, my receiver has no mono switch, so I couldn't defeat it. Shortly before they rebuilt their antenna system they removed the stereo. My problem went away.

I would never, ever recommend AM stereo for any of my clients.

I don't agree. It's much more complicated than that. The "marketplace" decision should have allowed stereo to flourish. The technology exists to make a receiver that's compatible with all systems. Just like DTV receivers must be.

What killed it was corporate greed and patent violations. The FCC played a role, for sure, but wasn't smart enough to be able to kill it. There was a small company with a better system against a huge conglomerate with an inferior one.

As in most technical/marketing issues the company with the political and marketing connections wins, regardless of the quality of the technology. We have the best government money can buy.

230. John Leslie - Signing Off

Newsgroup: rec.radio.broadcasting
Date: 2000-01-16 00:00:00 UTC
From: Steve Crowley <Steve@Crowley.net>
Message-ID: <ZRqg4.6949$pb2.628392@tw11.nn.bcandid.com>
Source record: 21436
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

In John Leslie's obituary, published in the Saturday January 15th edition of the San Diego Union-Tribune, there's a quote that's a classic. No, not classic rock. More like something that echoes classic tragedy. What comes to mind for me is Brutus shifting from his assassin's role to deliver a stirring eulogy for Julius Caesar.

"The KGB family really misses him," Little said. "John and KGB were the perfect marriage."

The reason it bugs me is that "Little," as in KGB-FM Program Director Todd Little, is the same guy who fired the John Leslie he now praises lavishly.

Et tu, Todd?

Is this post-mortem hyperbole? Plain old hypocrisy? Or could it be that the head of "the KGB family" really is dumb enough to file for divorce from a "perfect marriage?"

That kind of painful "Pretzel Logic" could go along way to explain the 3 share. But dealing with the way it ravages radio is why I've had to spend way too many hours listening to a single Steely Dan cut on infinite loop:

"When the demon is at your door, in the mornin' it won't be there no more. Any major dude will tell you."

Right now that CD is still very warm, and though the world feels much colder, I am thankful I can play the song as many times as each new outrage requires.

John Leslie and I shared four sets of call letters on our individual long strange trips: KGB-FM and KPRI San Diego, KLOS Los Angeles, and KTYD Santa Barbara. He was brilliant at what he did, but when no longer allowed to do it John lost more than just a job. Any specific medical cause the coroner could write on his death certificate will fail to note that being thrown away by his last radio station is what killed his spirit. And God help us, we all face that same demon at our door.

The periodic unemployment which accompanies "Life In The Air Age" forces every would be talent to take a hard look at who we are, and how much of our self image is tied up in what we do. For those who wrestle with non-media dependencies, as John did, involuntary withdrawal from radio complicates questions of self esteem.

If, as the slogan John Leslie pasted on his locker door read, "You're only as good as your last show," what are you when there is no more show?

John's answer, distorted as it was by drink, denial, depression and despair, was "grim enough to make a robot cry." Deprived of his daily dose of air time, the man who believed the bumper sticker found it was all too short a journey from being "a holy man on the FM radio" to sliding "down, down, down the dark ladder."

If only he'd found the truth in Kate Bush's angelic reassurance:

Don't give up, 'cause you have friends
Don't give up, you're not the only one
Don't give up, no reason to be ashamed
Don't give up, you still have us
Don't give up now, we're proud of who you are
Don't give up, you know it's never been easy
Don't give up, 'cause I believe there's a place
There's a place where we belong

In a Spring 1997 interview with Radio & Records CHR Editor Tony Novia, "passion, intelligence and focus" were what then Jacor President Randy Michaels enumerated as qualities essential to stay afloat in the radio talent pool he planned to drain.

John Leslie certainly had all three, but his intelligence told him the lack of focus inherent in doing shows voice-tracked the day before and shipped hundreds of miles away to places he wouldn't be and couldn't see -- computer augmented with elements he'd never hear -- assembled for listeners he'd only talk at and never with -- was not
something which could sustain passion in either announcer or audience.

Of course such attitudes, not tolerated in the new order, are punished. For in this age's version of the ancient tale, the emperor beheads those who don't share his opinion of the new clothes while stock market sector analysts cheer the executioner.

Some giants are recognized too late. When given his chance to carve memories out of empty time, this one made more than a transitory impression. Those who heard him knew John Leslie as one who truly believed in the potential of an immediate and intimate medium, and proved its power daily. Those who point to the deep footsteps he left note with pride that he never crushed anyone in the process of making his mark.

The loss (or perhaps more rightly the martyrdom) of John Leslie puts an all too human face on the true cost of this change, for he was far more deeply loved than he was deeply flawed.

Steve Crowley
(KGB News Brother emeritus / disgusted former Clear Channel stockholder)

Song quotes:
"Any Major Dude" by Steely Dan, Pretzel Logic, 1974
"Life In The Air Age" by Be Bop Deluxe, Sunburst Finish, 1976
"Rainy Night House"by Joni Mitchell, Ladies Of The Canyon, 1970
"Cold Blue Steel And Sweet Fire" by Joni Mitchell, For The Roses, 1972
"Don't Give Up" by Peter Gabriel, So, 1986

and below
"Tears of Rage" by Bob Dylan, Basement Tapes, 1975

.... as previously posted to All Access Net Talk BB:

"John Leslie"

There was a time we'd turn to you, old friend,
and you'd know what to do.
We'd look for solace in a song
upon getting this kind of news.
You were there to voice what we could feel
when heroes fell to demons real
enough to them, 'though some unkind
would claim, "They're only in the mind."
Who's left to give voice to our grief
now that the news is about you?

If I reach back to FM's free form age
and cue up Dylan's "Tears Of Rage"
would it capture what was in your heart
before that fall so final?
I don't know. But if I didn't try
there'd be yet another cause to cry,
so pardon all the scratches folks...
this one's on ancient vinyl:

"It was all very painless
When you went out to receive
All that false instruction
Which we never could believe.
And now the heart is filled with gold
As if it was a purse.
But, oh, what kind of love is this
Which goes from bad to worse?
Tears of rage, tears of grief,
Must I always be the thief?
Come to me now, you know
We're so low
And life is brief."

Goodbye, John.

Steve Crowley - KGB News Brother

===
Read all about it from other sources:

RadioDigest-dot-com's John Fox - including quotes from our mutual first
source at:
www.radiodigest.com/san_diego/sd_news/2000/sd_011300_fox1.htm

>>...very sad news to report. Former KGB air talent John Leslie was found in the shower of his home Tuesday 1/11. Apparently, he'd been dead about a week. Friends say John had been drinking heavily since being fired from KGB last summer... <<

I took the initiative to confirm the story before Fox published. There was nothing available at the time on sites for San Diego TV stations, the Union-Tribune or KOGO whose "news radio" web page is dominated by links to other sources. But more than three hours prior to Fox's email, KFMB's Mike Berger said:

>>>No official word as to the cause, but those of us who knew attribute (it) to alcohol abuse and lack of nutrition. He had lost an incredible (a)mount of weight and was having physical problems we think coincided with poor nutrition. Worst of all, those that tried to intervene were rebuffed with denial.<<<

And the story as reported by Randy Dotinga in the "Static" radio column - from the North County Times "Preview" (Weekly Arts and Entertainment Magazine) January 14-20, 2000 edition - is available through 1/19 at -- http://www.nctimes.com/preview/radio.html -- under the headline: "KGB mourns a classic rock talent; San Diego has lost one of its best radio voices."

The major paper in San Diego finally caught up Saturday: http://www.union-trib.com/news/metro/20000115-0010_1m15leslie.html

You already know how I feel about the Little quotes.

> decision should have allowed stereo to flourish.

The "marketplace" consists of:

1.) the stations:
they rejected the FCC's decision of the Maggetbox system.

2.) the listener:
has no clue that Stereo on AM even exists. Let alone name even 3 of the 5 systems competing for the standard. How are they going to make a decision based on the little information given. It is akin to voting. (We have seen the recent results of that.)
It was considered it a "moot point" by the mid-eighties. I may still have the quote somewhere from an exec at ABC.

and

3.) the manufacturers of the product:
Where there is no demand, there is no product.

> The technology exists
> to make a receiver that's compatible with all systems.

There was. But Sony did not feel the need was there to fight it with Motorola.

> Just like DTV receivers must be.

Apples and oranges - and a different thread. (I'll make a comparison between DTV and CD's, if you like and a list of mistakes that are being repeated)

However, If you want to make the comparison between analogue to digital conversion of TV, you will be more accurate to use the loran to GPS conversion.

> What killed it was corporate greed and patent violations. The FCC
> played a role, for sure, but wasn't smart enough to be able to kill

No, but it was politically incompetent enough to do so.

> There was a small company with a better system against a huge
> conglomerate with an inferior one.

With political connections. Do the initials "P" and "D" ring a bell?

> As in most technical/marketing issues the company with the political
> and marketing connections wins, regardless of the quality of the
> technology. We have the best government money can buy.

Normally, I would ask, "Ain't it grand?" - In this case, it ain't grand. It was pathetic.

And the FCC has the audacity to give x-band consideration priority to stations that will go stereo!
Give me a break!

The first time I read that I fell on the floor. It is on my list of "Stupid Quotes."

I allowed myself to get too close to this issue.

I might have misunderstood what I learned about AM -- and I might just be wrong -- but isn't most of the power (50%ish) in AM used in sending the carrier signal, and the sidebands (i.e. the program signal, postmodulation) get far less apiece. Add a stereo pilot and a second carrier, and you're using even more of your power for that, instead of the original L+R, right?

Incidentally, does AM stereo the same way as FM, with a pilot tone and (L-R) higher in the band?

True. Unfortunately, get rid of the sidebands and you get dead air<g>.
(you *could* do what some hams do and simply turn the carrier on and off
in a predetermined pattern. Works real well, but you have to learn
Morse Code to understand what's being said...)

> Add a stereo pilot and a second carrier, and you're
> using even more of your power for that, instead of the original L+R, right?

It would be true, except that that's not how AM stereo works.

A stereo pilot is added, but the amount of power taken for it is
essentially negligible. But there is no second carrier for the L-R.
Instead, the L-R signal more or less frequency modulates the carrier
while the L+R amplitude modulates it.

> Incidentally, does AM stereo the same way as FM, with a pilot tone and
> (L-R) higher in the band?

No. (see above)

To do AM with a full subcarrier for L-R would require the use of a
subcarrier at at least 15KHz. (otherwise, the L-R sidebands would
overlap the L+R sidebands and you'd have horrible interference to your
own signal) But a subcarrier that high would cause severe interference
to the stations 10 and 20KHz either side of your frequency.

Just remembered, Tommy Dee who did "Three Stars" on Challenge in 1959 - the Bopper/Holly/Valens tribute - was a KFXM (San Berdoo) dee jay. Imus also recorded for Challenge in the early 1960s.

Am Stereo to get it "set" right meant the TX had to be optimized. Lots of sites
that had not been maintained (same finals for 20 years) finally got upgraded.
Also a lot of old mono consoles that were worn out got replaced.

Source record: 21253

690 is a CBC most likely Omni. or a two tower array. (but don't quote me could be 4) They usually got the best frequency available when they went on. CBC is dumping their AM's and moving to FM , well they have in Toronto. In Toronto both the Anglo and the French Tx's feed one omni tower, Word is the 50,000 watt clear channel will become multicultural.

243. Imus on WPHT 1210 Philly?

Newsgroup: rec.radio.broadcasting
Date: 2000-01-17 00:00:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <38839381.76DB@mindspring.com>
Source record: 21257

This morning WPHT 1210 Philly started Dr Laura instead of the 4th
hour of Imus at 9am eastern.

Does this mean they're in the process of dropping Imus?

It's hard to imagine that they know how to sell Imus properly
if they're looking for the Dr Laura audience, the job of the PD
being to put on something good and then figure out how to make
money with it. Sort of the opposite of putting on Dr Laura.

I listen from Central Ohio, after nulling away WDAO 1210 Dayton.
I can hear Dr Laura already on a hundred stations, thanks. Imus
is pretty rare.

(Does anybody listen regularly to long distance MW anymore? The best
of a thousand choices is always better than the best of a dozen, sort
of automatically. A short list of real audio sound clips from a couple
of days on 1210 kHz in Central Ohio, depending on how the phased array
is steered and the time of day - it can null two stations at once
and listen to a third under them both:

http://home.att.net/~rhhardin1/radio1210wpht.ra Philadelphia PA (15k)
http://home.att.net/~rhhardin2/radio1210wsbi.ra Static TN (8k)
http://home.att.net/~rhhardin/radio1210wdgr.ra Dahlonega GA (23k)
http://home.att.net/~rhhardin2/radio1210kokk.ra Huron SD (55k)
http://home.att.net/~rhhardin4/radio1210.kgyn.ra Guymon OK (78k)
http://home.att.net/~rhhardin4/radio1210.wskr.ra Baton Rouge LA (42k)
http://home.att.net/~rhhardin3/radio1210wdao.ra Dayton OH (38k)

Strangely, after this couple of days the list stopped growing and it
was the same stations over and over. I'd hoped to have Guam by this
time but it wasn't to be.

Anyway you can see why replacing a rare Imus broadcast with another
copy of Dr Laura is a definite lowering in the standard of living.)

249. Why doesn't the "real" TV Guide list low power stations?

Newsgroup: rec.radio.broadcasting
Date: 2000-01-17 00:00:00 UTC
From: StarskyHutchFan@aol.com
Message-ID: <3a.4b2448.25b4fe01@aol.com>
Source record: 21263

Does anybody know why the "official" TV Guide doesn't list low-power stations? And I'm not talking about translators. Here in the Phoenix area, there are quite a few to speak of, and they're all on UHF. Channel 24: ValueVision shopping channel. Channel 27: America's Store shopping channel. Channel 28: off the air for a short period, but will soon be broadcasting Spanish language programming. Channel 39: DayStar religious network. Channel 41: ACN (America's Collectibles Network) shopping channel. Channel 58: a MTV/VH1-type network and viewers call in requests. Channel 64: Telemundo. And Channel 67: interesting: I've noticed that they simulcast Spanish language Channel 22 from L.A. during the day, and broadcast Shop At Home shopping channel overnights. Is it just here, or does the "real" TV Guide not list low power stations anywhere in the country? Thank you in advance.

TV Guide does sometimes list LPTV stations -- for example, I believe
that the list KPBI-LP Ch 46 in Fort Smith, AR. I think they also list a
low powered Fox affiliate in Corpus Christi, TX. OTOH, I have seen
numerous examples of LPTV stations that they don't list, including here
in the Dallas-Fort Worth area.

I think they must decide on a case by case basis, with a fairly high
burden of proof in order for an LPTV to get listed.

Aside from that, I think they usually do not list shopping channels and
full time religious channels, even when they are full powered stations.

That's a fairly small number of people, in my opinion probably not a group large enough to program for. However, it seems to me that in many areas, the population within the 3 to 5 mile radius that one of these stations could cover could be quite significant. Here in the Dallas suburbs, that could probably take in 50,000 or more people...

You'd think Springfield would already hear WFAN 660 and the Boston station.
If so, maybe they want those listeners locally, and are not looking to build
from scratch.

The Imus audience is fairly specialized. You have to sell the show right.

If Dr Laura doesn't work, try a Spanish format, is the other track.
John & Ken on KABC did a morning of simultaneous translation into Spanish
in a shameless grab for decent ratings.

I used to DX Philly from Brooklyn, N.Y. everyday when 1210 and 1540 were playing oldies. If those jerks at PHT (WCAU) had any brains they would put Jerry Blavat and the old PGR crew plus some of the guys that migrated to OGL back on the AM band with that great philly soul and kick some ass with that killer 50Kw. Imus is a little big mouth jerk that me and my friends used to chase in the 2 floor hallway at NBC. Why people waste time listning to his crap and Stern's for that matter is simply amazing!

WPHT, a CBS station, recently outbid WWDB, a Beasley station for the rights to carry both Dr. Laura and Rush Limbaugh. Until this past Friday, both were on WWDB.

Dr. Laura ran from 9A-12N on WWDB. I don't know what the program director at WPHT is thinking, except that perhaps he's trying to keep Dr. Laura's hours consistent with when she was heard across town.

You may also be amused to learn (as I was) that Rush Limbaugh also started broadcasting on WPHT today. It's amusing because I understand he started his vacation today. ;)

I believe their criteria is:

1) your station's schedule has to be reliable and accurate. We had a situation like that some years back when a Boston UHF station went broke because they paid way too much for syndicated reruns. When they lost the rights, they began plugging the schedule with public domain movies. Since the station didn't know what was going to be broadcast from one day to the next ("hmmm, will we have the money to pay for this run of 'Mary Tyler Moore', or do we run that 1958 classic, 'X-15', with Mary Tyler Moore??" Don't laugh - that's what they did.)

TV Guide will only list stations with fixed, accurate, reliable schedules.

2) AFAIK they will not list program schedules consisting mostly of infomercials or home shopping. In other words, you probably won't find the Guthy-Renker Hour listed in TV Guide.

3) They won't list pointless schedules -- like an all-video channel, for instance.

They will give a mention of a station at the front of the listings (for instance, something like, "WXXX-LP in Saratoga carries home shopping programs seven days a week, and some public-affairs programming on Sunday mornings.")

Springfield is too far away to pick up Imus. He is on an FM station in Boston.
Prior to that, he was on a 50,000 watt (but very limited-range signalled) AM
station.
He just didn't make it big here.

Springfield is too far inland for NYC daytime signals. A similar distance
along the coast would be fine, WFAN comes in like gangbusters in New London.

Springfield overlaps Hartford and Worcester for FM's but not Boston.

A couple that come to mind in addition: Casey Kasem's "Letter to the Beatles' about a chance encounter with the group. It spawned a satire by a San Francisco DJ whose name I can't remember. Also there was the novelty record made up of clips from then current hit records, "Henry goes to the Moon" by Ted Randel. Don't know if the person who recited the poem Desiderata (You are a child of the universe....)was a DJ, but well could have been. This thread has brought back a lot of memories.

The Casey Kasem was called " A Letter From Elaina" and was on Warner Bros.

There was such a record called "Letter To The Beatles" but it was done by The
Four Preps on Capitol.

"Henry Goes To The Moon" is listed on the label as Ruff and Reddy

"Desiderata" was done by Les Crane

This isn't 50s or 60s, but the one DJ to hit #1 on the Billboard Hot
100 stands out... Rick Dees' "Disco Duck."

>there are quite a few to speak of, and they're all on UHF.

The TV Guide edition for Sacramento (Comcast Cable) doesn't list any
of the area's LPTVers. But the Northern California edition lists the
two UPN affiliates in Chico/Redding that are both LPTV stations.
(Actually, I believe it lists the Chico station and in the front it
says "for viewers in Redding...")

I suspect any LPTVer that is a Fox, UPN or WB affiliate will get TV
Guide listings...ala the Fox affiliate in Santa Barbara, CA, the Fox
affiliate in Bakersfield, CA, etc... and as for non-affiliate
stations, I suspect cable carriage helps a lot. WAOH-LP (29) in
Akron, OH didn't get listed till it had worked its way onto the major
local cable system in Akron. Even then, TV Guide only lists them in
the "prime time grids".

As someone else posted, stations that are mainly home shopping or
infomercials or music videos are pretty much guaranteed not to be
listed.

>You'd think Springfield would already hear WFAN 660 and the Boston station.

The Boston station (96.9 FM) barely reaches Springfield on a good day, though since it is on a rather empty channel in New England I understand the signal does get out really well. And when Imus was on WEEI in Boston (850) there was no chance of picking up that station in Springfield. Maybe a very remote possibility of hearing WEEI's simulcast parter, WWTM (1440 Worcester, Mass.), but definitely not WEEI.

And I would gather that The FAN gets into Springfield pretty well, too.

272. Mark Time Award for Science Fiction Audio

Newsgroup: rec.radio.broadcasting
Date: 2000-01-18 00:00:00 UTC
From: Jerry Stearns <jstearns@mtn.org>
Message-ID: <170120002026539728%jstearns@mtn.org>
Source record: 21278

The Mark Time and Ogle Awards -- 2000

Presented by The American Society For Science Fiction Audio (ASFSFA)

The Mark Time Award is given each year to honor the
Best Science Fiction Audio Production.
The Ogle Award is for the Best Horror/Fantasy Audio Production.

A Gold and Silver Award in each catagory will be Presented to the
Winner at MINICON 35
Friday, April 21, 2000, in Minneapolis, Minnesota.

How To Enter:

1. Print and fill out the Entry Form. (see below or
see http://www.mtn.org/~jstearns/MarkTime.html)
2. Send Five (5) copies of each Audio Production you are entering
(CDs or Cassettes), the Entry Form and a check for the $25.00 Entry
Fee to:
Mark Time Award, 3421 44th Ave. S., Minneapolis, MN 55406
3. DEADLINE for Entry: February 1, 2000

Criteria for Judging:

1. The degree to which the Production fits the subjective description
"science fiction," as against "horror" or "fantasy."
2. Use of Medium - sound design, location recording, "audio art."
3. Writing - storyline, characterizations, dialogue.
4. Performances.
5. Direction.
6. Technical production.

Judges for tthe 2000 Mark Time Awards are:
Richard Fish, LodesTone Media
Jerry Stearns, Minicon 35 Staff
Philip Proctor, actor/voice artist, Firesign Theatre
Brian Price, Midwest Radio Theater Workshop
Kara Dalkey, Fantasy Author
The Mark Time Awards are co-sponsored by MINICON and Minn-STF. (The
Minnesota Regional Science Fiction Convention, sponsored by the
Minnesota
Science Fiction Society.)

276. Re: Kennard sells out LPFM service

Newsgroup: rec.radio.broadcasting
Date: 2000-01-18 00:00:00 UTC
From: Lee Smith <ckvnfm@mb.sympatico.ca>
Message-ID: <Cw7h4.382$lf7.3948@news1.mts.net>
Source record: 21282

Hello Folks:

Canada and a number of other countries have had an LPFM category for quite a few years without the world blowing apart.

In Canada, I operate a licensed LPFM from a 450 foot high building in the middle of a population of 700,000. 15 watts is all I am allowed to run, and have no difficulty in reaching anywhere in the city except for concrete reinforced appartments and offices if you live on the wrong side of the building relative to the tx site. Coverage to a modern car radio with good sensitivity is about 25 miles. Remember, this is a perfectly flat area though.

The spectrum situation here is a lot different than in US markets, with nowhere near the overpopulation of stations and demand for short-spacing that you are faced with. I doubt there are many US 3/4 million markets with any space left on the dial at all. Therefore, while LPFM is completely viable here, it may have a different problem to solve in the US due to interference reducing the effective coverage area of LPFM operations.

One thing I note when I visit the US, is there are a great many "rim-shot stations" as you call them. They appear to be attempting to serve areas well outside their 3 mv contour, and frequently attempting to call territory outside the .5 mv contour "theirs."

Is this what the NAB refers to as "Interference" to currently licensed operations? If so, more power to LPFM operations!

As far as money and profitability, it is as simple as keeping expenditures lower than income....what a broadcast revelation!

Cheers to all.
Lee Smith

There is also translator abuse in the US -- a mysterious company called "Best Broadcasting" applied for a translator station on 88.5 FM in Lawrence, Mass. to relay programming from Salem (Mass.) State College, 20 miles away. The license application was withdrawn with an objection from WFCR-FM --- over 100 miles away! A non-commercial station!

And, there are many "rimshots" -- in the Boston area, particularly --- I live in Haverhill, which is 30-35 miles north of Boston. The city's FM station has always frantically tried to market itself as a Boston station for years.

Previous to the "Discophonic Walk," Jerry Blavat had a single called (I
think) "One More Time, Back To School" in the early to mid sixties. He was
working at WCAM-AM (Camden, NJ) at that time. The song may have been
re-released and used as the flip side of "Discophonic Walk."

> changed to trigger at 15:27 and the remaining time is filled with
> extra commercials.

The automation cue is still sent from network to station at :17:00.

For the network program to take its break at :15:27 it would need to "know" that the station was using the CashBox. The CashBox works without the network's knowledge. It still cuts out 1:33 worth of network audio, but the local station accomplishes this by inserting the extra 1:33 of local material at the *beginning* of the manipulated segment, not at the end.

At 12:06:00, the CashBox begins to record the Rush network feed, while the local station plays its 1:33 worth of extra commercials and promos.. Then, at 12:07:33, the local station presses the "play starting now" button (or whatever it's called) on the CashBox and Rush's program beings to play *from the beginning* at 12:07:33. Silences are clipped out during the playback so that it exactly "catches up" to real time (no longer delayed) at 12:17:00, or 12:58:00, or whenever the next hard-timed break is.

This sounds fishy. Is "Rush" calibrated so that one knows exactly how
much dead air he will produce in ten minutes? I think not.

Therein, I would think, lies the rub. After someone said that WFLA used the system, I checked them out. Sure enough, they started a minute late and caught up to "real time" by the first commercial break. One minute out of approximately 13 means speeding things up by 7-8%, which would be very audible with old-fashioned means. Now, I *thought* I heard the processing impart a "nervous" quality (quivering) to Walter E. Williams' voice, but (a) I am not very familiar with his voice and (b) the cheap radio I had tuned to my referenece (non-processed) station may not have let me hear that quality if it was already present.

It's my suspicion that the processing introduced that quivering quality as a result of its scramble to make *sure* that it caught up to real time by the first break. (By five minutes into their broadcast, they were only 30 seconds behind, which represents a speeding-up of 10%.)

(The opening theme music sounded very wrong on WFLA, btw.)

The programming had better be damned good to inspire someone to put up
a rotator just to hear it. I seriously doubt LPFM will have
programming good enough to get me to rotate the radio to hear it.

287. Strange Moment in Rush/Hannity/Imus

Newsgroup: rec.radio.broadcasting
Date: 2000-01-19 00:00:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <38861F56.4EB6@mindspring.com>
Source record: 21293

An out-of-the-blue question from Hannity substituting for Rush
to a caller in New Mexico, whether he lived near Fred Imus...

http://home.att.net/~rhhardin5/rushcut.imus.ra (40k)

leaves you wondering if you heard it right. Fortunately it was
saved on the end of my 5 hr John & Ken tape for the day.

Rush has always refused to mention Imus (``I'm not going to help the
career of some broken-down disc jockey'' as he said after the famous
Imus speech in Washington), in response to fairly successful Imus
parodies of Rush.

All it would take to get back in Imus's good graces is a note
saying that this or that parody is pretty funny (``You know, Rush
isn't such a bad guy''). Imus is not strong, especially since the
great softening.

So anyway Hannity mentions Fred Imus, which is strange of him to bring
up because Hannity is on WABC and Imus on WFAN in NYC, even without
Rush's views coming into it. You'd guess that Hannity listens to
the FAN in the morning.

Not really that strange at all. Hannity is a huge fan of radio.
He knows, or knows ABOUT everyone. He even went so far as to tell a
caller in Chicago recently that he is a very good friend of Mike
Malloy, the arch anti-conservative on WLS late nights.
Hannity is what a former General Manager of mine calls a "Radio
Rat," whose life is centered on, and revolves around an all
consuming hunger for radio.
That he plugs the Fred Imus is not at all unusual.

Bob Dearborn when he was on RKO doing Night Time America, knew
not only calls and dial addresses of all of his affiliates, but the
names of the talents on each station, and what they were known for.
When I was doing mornings on KROK, I put together a special edit of
Taco's "Puttin On the Ritz" with the "Puttin on the Ritz" segment
from "Young Frankenstein," cut into it, pitch matched and at the
same tempo. Tough to do with a couple of Ampexes at the time.
Dearborn, mentioning KROK one of his breaks acknowledged me in the
morning, and also gave credit to my "Puttin on the Ritz" edit. I
hadn't told him. But he had stringers everywhere.
Art Bell is similarly adept at pulling calls out of the air.
Both Dearborn and Bell, like Hannity do not have lists before
them of affiliated stations, crib notes or other mnemonics, they
have a passion for their craft, and will tell you, it's easy to
remember the things that are important to you.

Not out of the blue. I think Hannity had vapor lock
and was pulling out any association to talk about. It was slightly
revealing in that it showed Hannity was a regular Imus listener.

Liddy has said nice things about Rush over the air, even though they're
direct competitors, but it was on topic. (Rush eased into Liddy's
show once on WABC when Liddy got some throat trouble on the air,
not knowing Liddy from Adam but just knowing he needed help, according
to Liddy.) Hannity is off on a tangent.

Speaking of throat trouble, some may be amused or painfully amused
by a Radio Japan newscaster having sustained trouble with no good
way out. Notice at the end, when it's over, he's abandoned his
radio voice pitch.

http://home.att.net/~rhhardin2/japancut.noodle.ra (133k)

Speaking of tangents.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

Sadly, before there was a standard there was tests. The FCC wanted to clear
up any interference issues.

A very small handful of radio stations was selected for these tests. Seems
like there was the Harris system, Kahn and Motorola systems. Anyway...KRMG
in Tulsa Ok was selected to test the Motorola system which became the
standard.
KRMG used the system for a few years after the standard was adopted. But now
are back in mono.

At one time there was 4 station broadcasting in AM Stereo. Now there are 2.
Neither of them promote it or even mention it on the air. Guess it's a
embarrassment or secret.

Source record: 21301

Well, a check of www.stereoam.com shows that there are various models of AM Stereo receivers in production but--guess what--these units are intended for the Japanese market. My point is that the good AM receivers that many of us have been yearning for have already been designed and are rolling off of assembly lines, but the manufacturers' attitudes are along the lines that the US market is only interested in narrowband mono receivers for listening to talk shows on an overcrowded band. Chris Cuff, who works for an Aiwa factory authorized service center will attest to the fact that some models of Aiwa receivers have space on the circuit board for an AM Stereo decoder and its associated components, but they are left off in US models.
Although many of you may laugh, there are grass-roots efforts afoot to try to convince manufacturers that AM Stereo can be inexpensively incorporated into tuners (MC13028 decoder chips from Motorola can be bought for less than $2.00 and the cost of an extra ceramic filter for wideband operation is about the same) and to persuade operators of music-heavy stations that have discontinued stereo to turn it back on.

Alfredo Torrejon

P.S.: Despite the fact that AMFM has been dead-set on shutting down AM Stereo on its stations, there are others (though they might just be a speck in the radio biz) who are continuing to promote stereo or are even bringing more AM stereo signals to the dial. Crawford has been upgrading the facilities of about a dozen of its AMs, and part of the upgrades will include AM Stereo.

In that case, I have good news for you. Fanfare FM, the
manufacturer of high end tuners has been in development of an AMAX
certified AM addition to its FT-1 FM tuner. To be called the FT100,
I believe, it will be like all Fanfare products, top drawer, and it
will be aimed at the US market.

>For example when there were
>both a WNEW AM station and FM station, the calls would be WNEW-AM and
>WNEW-FM.

Wrong. The FCC has never assigned an "-AM" suffix. The AM is simply WNEW.

>As for legal ID's, there is no FCC requirement (nor has there been one
>in the last 30 years that I can remember) to include the service
>designator in the call.

Sorry, yes there is. To use your WNEW example, the FM would be required to ID
as "WNEW-FM".

TV has been doing that for years. I remember back in 1979 (in could have been longer before than that) WABC-TV 7 in NY used to run a movie between 4:30 and 6:00pm. They played "Fantastic Voyage" and removed the entire miniaturization process AND Raquel Welch's nude scene
- those B_ _ _ _ _ ds.

When the Sci-Fi channel was playing the "special edition" Star Trek episodes last year, they were starting at 7:30 and ending at 9p. The shows were intact. But when they moved them to 8p-9p, they were chopping frames out of each shows. Very annoying!

Indy's have been doing things such this for years. I have always thought why most never had big ratings was because viewers perceived the blatant disrespect the station had for the program - it was just filler between the commercials, anyway.

Fred is Don Imus' brother. Part of Imus' shtick is to have his brother on a lot of his shows, I guess. Goes along with the professional laughers.

I don't listen to Imus; I guess not too many people in the Boston area did, because he is gone from the "get-a-life" sports station. I think that an FM outlet has started up, all-talk, and he is on that station now.

I would laugh. Adding $4.00 to the price of a receiver would make
manufacturers laugh, too. That's an astronomical increase in price in
a competitive marketplace. Particularly to use a defective system in a
market that doesn't care about it.

Well, that's the whole problem, isn't it? Who, outside of a few radio nuts (I'm one) cares about stereo AM? My car radio doesn't even give me stereo on FM most of the time (over-eager circuitry protecting my delicate ears from noise)--I doubt the average person would even notice that.

I wonder, tho, if anyone is really interested in reviving AM stereo whether Q-Sound might be a stepping stone. They advertise they can enhance mono Internet broadcasts. Put it in some mid-market radios as an enhancement for anyone who happens to still have a music station on AM (or even to cover up when your radio is only delivering mono on FM) and maybe people would get interested in stereo sound... maybe not. Most people when not in cars put the radio off to the side and wouldn't notice stereo anyway. And there'll never be a stereo Superadio.

It's done.

Press release and 5 - count 'em 5 - statements by individual commissioners
are on the FCC's website with easy links from http://www.fcc.gov/

Summary:

Two power classes 10 & 100 watts - predicted range 1 to 5 miles max.
All non commercial - minimum schedule 36 hours a week.
Interference protection for existing analog stations +/- 2 frequencies.
Interference protection for digital expansion (presumably IBOC).
Local owners only to start - limits change over 3 year time.
Contested applications could bring rotating control over license term.

>to OGL back on the AM band with that great philly soul and kick some ass
>with that killer 50Kw. Imus is a little big mouth jerk that me and my
>friends used to chase in the 2 floor hallway at NBC. Why people waste time
>listning to his crap and Stern's for that matter is simply amazing!

Let's note that the folks at Infinity are probably making more money with a
talk format on WPHT than they would with an oldies format based on Nostalgia,
and also attract better demographics than with the Geator with a Heater or Hy
Lit, or any of the older Philly talent from that era. 1540's present
programming also demonstrates that the market for what you think would draw
listeners won't do so, as it's hard to believe that it generates huge numbers
or revenue. I could of course be wrong, I haven't read their profit sheet, but
I do know where it shows up in the arbitrons.

Here in Phoenix the local Telemundo affiliate, KDRX-LP Ch. 64 is carried Cox Cable but is not listed in the "regular" TV Guide. Meanwhile, they do list QVC and the TV Guide Channel (surprise!) in their listings, as well as local TBN station KPAZ-TV Ch. 21, which I found unusual in that many TV Guides don't list the local TBN station.

They also don't list the HDTV stations that are on the air (KPHO-17 CBS, KSAZ-31 Fox, and KNXV-56 ABC). Does TV Guide mention the digital stations in other areas?

The reason why this (the start of Year 2,000) became an issue to begin with is because of a basic misunderstanding:
1.) Math has nothing to do with the calendar!
2.) The calendar has nothing to do with Math!
3.) Don't confuse or mix the two!

Basics, fellas.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

I noticed in the Las Vegas TV guide neither the Univision or Telemundo stations
were listed, yet both are full-power stations. In other markets, the Spanish
stations are listed.
Do stations have to pay to be included?

Not here in Sacramento (currently the NBC and ABC affils are running
their HDTV signals...I am not sure but I believe the CBS and Fox
affils have to do so by now?). Of course, none of the HDTVers is
running any regular programming different from the analog signals,
aside from HDTV versions of "Monday Night Football", "The Tonight Show
with Jay Leno", etc...

At present there's no real point to doing so, since (A) hardly any home viewers are watching them and (B) commercial stations almost always either simulcast their normal schedule or run HDTV demo material. Some of the few PBS stations with digital transmitters do run a four-channel multicast from PBS (with HD programs at times) rather than simulcasting, but again the audience is almost nonexistent.

"Well, a check of www.stereoam.com shows that there are various models of AM Stereo receivers in production but--guess what--these units are intended for the Japanese market."

The Japanese radio market is very different, because the major cities have far more AM stations than FM due to different licensing policies. That seems to be the reason for AM stereo's popularity there. For that matter, Sony still sells several AM-only radios in Japan while offering none here.

"You could get rid of ONE of the side-bands, and use the extra energy and bandwith for a better audio-signal.

"I remember Radio Netherlands testing this one of their Bonaire transmitters (SW). The modulation was deeper; hardly any distortion of the audio signal noticed."

And in fact Kahn was promoting this concept back in the 1950s; his CSSB proposal (which, IIRC, was tested by Radio Free Europe/Radio Liberty) was the predecessor of his ISB stereo system, and therefore the direct ancestor of the Kahn POWERside system. (VOA uses ISB transmission now -- at least they did last time I heard -- for links from Washington to transmitter sites abroad, but they only have a weak pilot carrier so you have to have a synchronous detector to receive the feeds.)

> sad day for radio listeners."

In other words, the old class-D license has been brought
back--or--LPFMs can originate programming. It's not a "sad day for radio
listeners;" it's a sad day for the conglom-people who won't be able to buy
out all the LPFM licenses and program them from a satellite in order to
keep competition out!
"Advancement of social engineering over spectrum integrity"--What
a bunch of crap! All the nay-sayers think that there will be a flood of
flea-powered stations and then turn around and say that this service won't
be feasible because most of the would be LPFM-ers won't have the resources
to keep their stations on the air. Well, if LPFMs have to sign off or
don't even go on due to economic hardship, then there aren't going to be
lots of flea-powered signals clogging up the dial, now will there---duh!
Realistically, who is going to be starting up most of these new
stations?

(1) Religious groups
(2) Ethnic organizations wanting to do foreign language programming
(3) A new generation of university stations that started up too late to
get a class-D license and that were not able to get full power licenses

That's it--I would bet that 90-95% of the LPFMs that go on the air will
fit into one of the three categories above.

I think it strange that nobody mentioned "our" Guy Zapoleon for a track.

About 15 years ago, if memory serves correctly. Demento used to play him
regularly.

The MC13020p chip was supposed to have a successor that would not allow Kahn's "Secret" to be used in conjunction with the chip for the ability of "multimode" reception.

But the $2 or $4 extra we're talking about here is a retail price for the additional parts for estereo. When talking in terms of manufacture, that price would be a purchase in terms of tens of thousands and thereby considerably less cost per item. Since nobody in the real world (the world outside radio) cares or knows about AM Stereo, that is crux of the decision.

> interested in stereo sound... maybe not.

You can liken Q-Sound to colorization in old movies. Some people don't
like it, and would never like it no matter how good it got, because
that's not the way the movie was originally filmed. Just as a "Wide
Stereo" button in some Boom boxes exaggerates the separation and buries
the vocals, it is "unnatural." I purchased Q-Sound with an upgrade for
RealPlayer and use it in the settings, but I wouldn't purchase it again
as a separate item although it may be a reason to continue my annual
upgrade of RealPlayer. (but that's a different subject)

> Most people when not in cars put the radio off to the side and wouldn't notice stereo
anyway. And there'll > never be a stereo Superadio.

The original GE Superradio was supposed to have AM Stereo capability. It
was interestingly absent when the unit hit the market.

> "We have been told that we need our bodies to exist,

And heaven help us if we were informed that these things were going on on our airwaves. I'm glad they keep it a secret. You never know what might happen if people actually knew what was on. People might want to tune in. People might even start thinking of TV Guide as a source of information rather than casting about the internet for something--anything--better (read: useful).

Sorry, I just don't like the nonexistant audience excuse. An awful lot of good ideas have died for lack of an audience that never even knew it was there to tune in to.

Didn't it used to be the other way around? Didn't they used to put (for example) big "COLOR" banners in the listings to announce color programming even when the audience hardly had any color TVs? Isn't that far better than leaving out information because they figure most of the people can't use it *at the present time*?

It comes down to the difference between being a leader and being a follower, and probably why I look at TV Guide as almost a total waste of paper.

(And if it seems that we're off the topic of radio broadcasting, I've long contended that radio needs a comprehensive listing guide like TV Guide should be. If people actually knew when something was on, they might tune in! What a concept.)

Yes. Sad indeed that the FCC bent over for the NAB and neutered the promise of LPFM as they have done.

Absolutely. In the case where a station's call letters include (on the
license) "-FM" as in WOI-FM, the "FM" letters are part of the call letters.
Period. End of story. To leave them off an ID would be the exact
equivalent, in the AM band, of identifying WABC as WA.

And, for the last time, can we all understand that "-AM" is simply not used
not used as part of call letters in the AM band. There is no AM broadcast
station in the United States licensed with a "-AM" as part of its official
call sign.

Hi Ruud,

While it is true that getting rid of one of the sidebands would reduce the occupied bandwidth, or allow a wider modulation frequency bandwidth, it is wrong to believe that getting rid of one of the sidebands will either save energy, or allow for a better signal to noise ratio. The wasted power in standard AM is not in the second sideband, but rather it is in the carrier. Decreasing the sideband energy of a DSB AM signal by removing one sideband will reduce the post detection SNR by 6 dB, assuming the RF/IF bandwidth remains constant. To recoup the 6 dB loss of SNR resulting from removing one sideband, it is necessary to put that power back into the remaining sideband, increasing it 3 dB, and also to cut the RF/IF bandwidth in half to reduce the noise power by 3 dB, for a total of 6 dB. The bottom line is that both SSB AM, and DSB AM provide exactly the same post detection SNR, when the same total sideband power is transmitted in each case, and the RF/IF bandwidth of the SSB system is half that of the DSB system. The seeming incongruity of this results from the fact that the two sidebands are correlated, and add as Voltages in the detector, while the noise power in each half of the RF/IF pass band is uncorrelated, and adds directly as power in the detector. In other words, DSB AM has twice the noise power because it uses twice the bandwidth, but the two sidebands of DSB AM add coherently in the detector, producing 3 dB more detected signal, even though they are individually 3 dB less than a single sideband with the same total energy. The net result is that SSB systems don't have a signal to noise advantage over DSB systems. I like to think of DSB AM as a sort of crude Spread Spectrum system, because it is less sensitive to narrow band interfering signals than SSB AM. It is true that the carrier is wasted energy in either case.

336. Idea -- good use for LPFM

Newsgroup: rec.radio.broadcasting
Date: 2000-01-22 00:00:00 UTC
From: Ray Dennis <Realtor@RayDennis.com>
Message-ID: <3889D48D.14E1F80A@RayDennis.com>
Source record: 21342

Here's my idea of a legitimate use for LPFM:

If I owned a funeral parlor in a small town, I would put a station on the air. Every day, I would sign on, like at 7:00AM and 5:00PM and broadcast the obits, births, birthdays, anniversaries, family gatherings and local news, and sign back off.

Too bad they are allowing ownership of up to 10 stations. I think one would be better.

You might see high schools and such as well. (Although local governments always had AM TIS stations available to them)

This is a serious radio service. The startup costs will probably be too high (I've heard about $2-3K) for the "kids playing radio" types.

Will it magically bring us "better" programming? Only time will tell, I guess. . .

There's supposed to be a point system, of who gets the station, based on promises of local programming, among other things.

Of course, there's probably nothing to stop some of these stations from playing tapes all day, with no-one at the controls (I haven't read the full rules yet, but...)

Another likely group -- city governments who would like to put a station on the air for local news and information. This could work very well, especially if some of these cities were also to look to their local high schools and junior colleges for folks to produce at least some of the programming.

As for the howls of outrage from the NAB's Eddie Fritts, I find it hard to believe that anyone is taking his posturing seriously. He reminds me of the political lobbying groups that constantly send out flyers proclaiming the "next big threat to our closely held values of [fill in the blank]". When you do the actual research, you usually find that the hype is vastly overblown from the reality.

I suspect that as the handful of LPFMs that these rulemaking allows actually come on the air, we will find that the amount of interference is close to non-existent -- and certainly far less than the interference caused by the major market rimshots allowed under existing rules.

342. D.J.s on record vs. conflicts of interest

Newsgroup: rec.radio.broadcasting
Date: 2000-01-22 00:00:00 UTC
From: Norm Katuna <normk2@hotmail.com>
Message-ID: <166k8s0af0mckj3pm1k152s4fiks2jk78r@4ax.com>
Source record: 21348

In my previous thread I had a lot of responses to D.J.s that recorded on the side. Either as a one-shot deal or with people like Jim Lowe, Alan Freed and Jape Richardson that had more than just one record credited to them as the artist or co-artist.

With the Chuck Daugherty/Darty release on Roulette and a comment by the person that sent that info to me, I thought that this just might be a fairly interesting thread to mull over the possibilities.

I think it was on Bravo that that the two part series on Disc Jockey's appeared. I can't remember if it was separated by 50s/60s or pre payola/after payola, but what one of the things that I got out of it was that before the payola scandals, some disc jockeys (if you were more famous, you had more power to do this) were allowed to program most of their shows. I mean they had to play the current chart songs, but had a lot of leeway in playing up and comers and other new and obscure items.

Now, whenever a jock recorded his own personal recording for a major (or a big indy) label, where did that leave things?

I mean, would he consciously or unconsciously play other records from those labels more often than if he did not have a direct financial benefit from his own recording on those labels. Maybe he didn't play his own record since it would look obvious, but what about all those other records that were coming out on those same labels?

Alan Freed recorded for Coral Records, which was a subsidiary of Decca and a sister label of Brunswick. A very major label factory in the 50s. Lots and lots of stuff from Teresa Brewer, to Bill Haley and the Comets to Buddy Holly and the Crickets came from that stable.

You had Jim Lowe who had a few records for Dot. You also had Jape Richardson (Big Bopper) who had several for Mercury. Al Jazzbo Collins had some for Capitol and for Brunswick.

Art Roberts recorded for Imperial. Ted Randall for Verve. Joey Reynolds had a couple on Swan as half of Joey and Danny. Wink Martindale had a few on Dot.

Ira Cook on Imperial, Clay Cole on Roulette and Imperial.

Most of these were before or just after the payola problems. So the before can certainly fit this thread and maybe some of the just after recordings might not have had the trickle-down affect with no more personal programming.

So, I just thought that "some" of the jocks listed here "could" have just been a little more favorable in playing records from the same label/labels that they had recorded for. Or if they did, could it have been considered "loyalty" to

that label?

And god forbid, could any of these recording deals have actually been payola in form of a "play our records and we'll record you and put out your record on our label?" :-)

Just a theory.

As a programmer always looking to keep the waters from collecting too much algae, I'm sure that you or others will be given to listening in other directions just as alternative rock had its roots in College non-commercial stations and is now considered mainstream. In this case, the programming doesn't have to be good, just effective.

I'm associated with two different organizations whose stations broadcast unusual programming (10 solid days of the music of J.S. Bach, for instance), and both organizations have been stung in the past by the FCC allowing co- or adcjacent-channel stations to pop up in neighboring markets. Our programming is more likely than most to find listeners 50 or 60 miles away, and these listeners are just as important to us as listeners next door, yet there's absolutely nothing we can do to stop someone from popping up on our frequency and cutting a big swath of territory our of our coverage area. This problem's only going to get worse with LPFM.

... and I must say, I'm enjoying it.

I live in a part of Westchester County, New York, where the geology is particularly awful for AM reception, and listening to WNYC-AM at night has been basically impossible. Now, I'm able to listen to it over Windows Media Player, and it sounds better than it does even over the best AM receiver I have, making allowances for unavoidable digitizing artifacts. I'm listening to Jonathan Schwartz' weekly Sinatra show right now, and it's quite a pleasure.

They haven't cleared 100% of their broadcast rights for the Internet, and will be replacing uncleared programming (like Selected Shorts and most of their live music programming) with programs from their archives.

However, it is a great source for live NPR news programming, like All Things Considered and Morning Edition, which NPR has only made available from their own site in archived editions with sections missing; and it's a better-quality source for Prarie Home Companion than you can get in the Realaudio feed from phc.mpr.org.

And it's a great resource for New Yorkers on the road.

Now if WNEW would just netcast Vin Scelsa, I'd hardly have a radio reason to stay in Metro NYC.

Now that you mention it, I remember reading pro-LPFM comments
filed by a city that wanted to set up a municipal radio station like this
(no, I don't remember which city it was, but it was a medium-sized town,
population somewhere between 40,000 and 100,000).

> As for the howls of outrage from the NAB's Eddie Fritts, I find it hard
> to believe that anyone is taking his posturing seriously.

Here's one thing that nobody seems to have mentioned yet--now that
the rulemaking has passed, LPFMs will be legitimate broadcasters. Will
they be barred from membership in the National Association of
Broadcasters?? It certainly doesn't seem like LPFMs are going to find a
lot of friends at the NAB.

Rich (you big lug),

In just what kind of stereo receivers would $4.00 be an
"astronomical increase in price?" Those $25.00 basement-bargain car
stereos that you see at the auto parts places? GPX personal stereos?? I
just don't see how a few dollars would be a prohibitive production cost
increase in brand name home and auto receivers that retail in excess of
$100.00 (and some of which cost significantly more than that). For years,
Ford, Chrysler, and GM put Motorola AM Stereo decoder ICs in many of their
factory radios, and nobody went bankrupt doing it.
The only serious lack of vision that I see in Motorola's campaign
is that they have not yet produced a single-IC receiver that contains the
FM IF/detector, as well as all the AM circuits--better yet, a chip that
includes all these functions plus the FM Stereo demultiplex. The AM Stereo
receiver subsystems that Motorola has tried marketing over the years force
designers to come up with a completely separate FM section, and that is
not a preferred approach in this age of single-IC, "we'll just use the IC
databook application schematic in our products to minimize R&D costs"
receivers.

Alfredo Torrejon

P.S.: GPX *is* one of those manufacturers that would laugh. I once saw a
GPX personal "stereo" that was very careful to *not* say AM/FM Stereo.
These guys were so *cheap* that they did not bother to include an FM
Stereo demultiplex IC! Only the tape player was stereo.

> lot of friends at the NAB.

It isn't about friends, it's about industry unity. Once LPFM is entrenched and functional I would presume that they will be permitted into the fold.

I would like to point out that once word spread through the community that LPFM was about to pass, National Public Radio filed three notices on January 13 as reply comments. One of the comments is so bizarre ...

"At the outset, NPR is compelled to correct the Commission's mischaracterization of NPR's position on the petitions that spawned this proceeding as "oppos(ing) the petitions. The low power initiative raises a number of difficult and complex policy and technical issues and the public interest requires a critical examination of those issues. Shining a light on those issues and asking hard questions is not tantamount to opposing low power broadcasting or the idea of increasing the number and diversity of broadcast voices."

It looks like that now LPFM is going to happen, they're claiming that really weren't opposed to it after all. Their questions were to guarantee that the FCC would think it out correctly, right? Other comments go on to say please protect our boosters and translators.

Uh-huh. Anything you say.

Seriously, I think this was filed so as to "make peace" with those who will be getting LPFM licenses. It looks like they want to be able to say "we not only didn't oppose LPFM, we asked the right questions to make it better!"

Hello Rob:

I'm still a little confused on what is "your coverage area" as you describe it. Was the city 50 or 60 miles away within the .5 mv contour in the technical brief that was approved when the station was licenced, or were you just lucky that up til the time the new station went on the air on an adjacent channel?

Not to start a flame war or be a smart ass or anything, but when the application was submitted, somebody in the station's management had made the decision that what was inside that contour was "just fine thank-you" and accepted it for who knows what reasons. Perhaps they were shortsighted. The new applicants are not to blame, and the FCC have actually done a pretty impressive job of shoe-horning in so many stations into the bandwidth available on a national basis. I don't think I'd want to be on the FCC the engineering staff trying to satisfy the number of applicants in a major population center.

I guess the question is how is LPFM with local programming any different than the use of translators?

I was pretty miffed when a local station signed on 2 channels away from a nice oldies station that I used to listen to via a 10 element yagi on a 50 foot tower. My location is almost 200 miles from the tx site. Was I in their coverage area as per the licence? Probably not, but I'm sure that somebody in the headshed was pissed about that too, as this is a potential market of 700,000 plus and troposheric ducting meant the oldies station was available to car radios about 30% of the time.

So Rob, help me understand this.

Regards,
Lee Smith

A fairly common form of payola for the big DJs was to give them part of the
writing credits of a song. The more they hyped the record, the more money
they got out of it.

>"astronomical increase in price?"

Let's just say I've had experience with manufacturers over the years.
They look at the component price and multiply that the number of
units. Then they look at the demand. Then they look at price points.
Then they say they can't increase the price, so $4.00 in components
times 1 million units means $4 million in reduced profits.

AM Stereo with the current system has no market demand. Therefore,
there's no upside to a manufacturer. No manufacturer willingly strips
$4 million off their profit.

I seriously doubt that. Local politicians will do to LPFM what
Congress has done to C-SPAN. We'll have blathering politicians
speaking to empty rooms trying to make constituents believe they're
making important laws.

Remember how angry politicians were when the Speaker of the House
ordered that the cameras be turned around to show the chamber was
empty. I think the process is called "special orders."

Frankly, I'd much rather have Billy Bob playing his favorite,
desperately needed, Hip Hop mix than yet another outlet for vacuous
politicians.

The cover story of the Louisville Scene section of yesterday's issue
of the Courier-Journal is about the increased use of automation in the
radio broadcasting industry. In my opinion the article devotes *just*
a little too much space to the pro-automation commercial radio
industry's side of the story. Beyond that I don't have much to say
about the article. Just letting everyone keep tabs on what the other
media are telling the common layperson about it.

Chris,

Look at the computer power required to get going with a digi 001. digidesign says that a MINIMUM of a 9600/300 is required. A G3/233 is good but a G4 is highly recommended by their east coast sales rep. The computer does all the DSP. I use the poor man's PT system. namely a audiomedia III using PT 4.3.1. If you use it with an outboard mixer you can keep the rack tools and have PT to boot. If I were to do it again I would go with a Lexicon core 2 (when they come out with the MAC driver) and MOTU digital performer.

Perhaps some of the confusion on this point goes back to the 1950's
where some AM stations got FM allocations; put the FM transmitter on
the air but did not have separate programming for the FM outlet. The AM
and FM program content was identically simulcast on both bands.

The station id's were also simulcast being, for example,

"WBRE AM and FM"

Hope this helps,

To pick a nit-

Stations that did identify in that manner were sometimes cited for ID'ing
improperly. The correct form is "WBRE and WBRE-FM," as "WBRE-FM"
is the distinct callsign of the FM station.

In 1963, KXOK/St. Louis jock Nick Charles
(Nick Pukish) released a song called
"Sunday Jealous" which was charted on the station's playlist for several weeks during the late spring and early summer of that year. I had the opportunity to look through Nick's personal memorabilia after he passed away a few years ago but was disappointed when I couldn't find a single copy of that record. I did manage to find an untorn Beatles concert ticket from the Fab Four's rainy August, 1966, appearance at Busch Stadium, and several pix of Nick posed with celebs. I also remember most of the lyrics to "Sunday Jealous."

Hm. I remember being in Chicago in 1994 and hearing WLS (890 and 94.7)
ID'ing as "WLS-AM and FM". This was back when the FM was simulcasting the AM's
news...

The stations now known as WJMP(AM) and WNIR(FM) in Kent, Ohio... a
stone's throw away from Akron...used to legal ID as..."WKNT, AM and
FM, Kent, Ohio"...for at least as long as I used to listen to them in
the mid-1970's. (And yes, you're right, as far as I know, I was just
giving a common "mis-ID".)

"Coverage area" means anywhere a listener can receive one's signal,
regardless of whether or not the FCC thinks (s)he can.

>Was the city 50 or 60 miles away within the .5 mv contour in the
>technical brief that was approved when the station was licenced...

No, but try telling that to the affected listeners.

>Not to start a flame war or be a smart ass or anything, but when the
>application was submitted, somebody in the station's management had made the
>decision that what was inside that contour was "just fine thank-you" and
>accepted it for who knows what reasons.

Nope; neither organization had an opportunity to protest the Commission's
actions in any of the cases where new co-channel or adjacent-channel
stations were licensed. The rules are quite specific about this; if the
transmitters are more than a certain number of miles apart, they're
assumed not to interfere with each other. In the case of, say, classic
rock stations, this approach may be valid because there's likely a local
station in each market offering the format, so there's no real reason for
listeners to resort to distant signals in search of it. Classical music,
however, is another case entirely; there aren't more than a few dozen such
stations in the country, and listeners who are outside but near a market
with a classical station will often go to great lengths to get it.

>I guess the question is how is LPFM with local programming any different
>than the use of translators?

The difference is that if someone in an adjacent market complains that a
translator is interfering with their reception of WHRB, that translator
must shut down. Translator licenses are conditional on them not causing
interference. I've not heard this will be the case with LPFM.

Well, the all Christmas format at KSNU/Roy Utah (107.9FM / Salt Lake City market) is finally gone. I don't know when exactly it disappeared, but it was sometime between Jan16 and Jan21. (No, that isn't a typo.) But here's what Deer valley replaced it with. An endless loop of.....

The Bee Gee's "Night Fever"

Not only is the station endlessly repeating the same song, the song never actually ends. Somebody set up the edit so that it loops back to near the beginning of the song just when the fade out starts. It's actually fairly entertaining for a little while, but it gets really boring fast. (and I don't see how they'll get a legal ID in there either, but I digress) I guess the bigger question is, what in Sam Hill is Deer Valley Broadcasting going to do with this station? At least the all-Christmas format was a fairly good idea for during the actual Christmas season. I could even understand it up until Jan5 (the *real* 12th day of Christmas). But through mid January? And now we have the all "Night Fever" station. I almost can't wait to see what's next.

The only thing I can think of is that their still waiting on the proposed application to move the transmitter and up the power. (see http://www.fcc.gov/fcc-bin/fmq?call=ksnu) I won't get into the question of how they expect to put a city-grade signal into their city of license from that proposed site yet either. <insert a Scott Fybush COL rant here>

So here's what I propose. Hey Deer Valley! If you're going to waste that station anyway, why not at least put something on that people will actually listen to? The holding-pattern format over the summer (The Edge*) was actually *gasp* quite popular among the twentysomethings in the area. And it wasn't just the lack of commercials either, though that was nice. Put that back up! You need a volunteer to set up the automation? Let me know. I'm available, and I'll do it for free. Just drop me an email.

* The Edge was basically 80's Top 40, all automated, no commercials. Just song, liner, song, liner, song, liner, etc.

370. Need info on WMEX in Boston

Newsgroup: rec.radio.broadcasting
Date: 2000-01-24 00:00:00 UTC
From: al.carnali@waters.com
Message-ID: <388c4bdc.228633838@news.shore.net>
Source record: 21226

I was just reading in today Herald that WMEX goes on the air again with an all talk format. Talk hosts include Jerry Williams, and Gene Burns. First, I thought Burns was on KGO in San Francisco, has he left or will this be some sort of networked thing? Next, does anybody know if they will be doing real audio. It's real tough to listen to AM in the middle of a steel and concrete building.

Thanks,
Al (al.carnali@waters.com)

The calls are back????? Where on the dial? 1510???

Before I moved to Florida in '85, the calls had just resurfaced at 1150
(the former WCOP/WACQ/WHUE/WSNY prior to WMEX) as an oldies format...I
know it only lasted a few years before becoming some other format/call
letters.

Clue us in...anybody!!!!!!!!!

>must shut down. Translator licenses are conditional on them not causing
>interference.

This is the law, but the FCC doesn't enforce it. Ask the people at WRUF-FM in Gainesville, FL about their attempts to shut down an interfering co-channel translator in the Jacksonville area. They've done everything short of taking a hacksaw to the feedline, yet the offending translator remains on the air and will not shut down.

Of course, the FCC also seems content to allow continued operation of a wide-coverage pirate here in Orlando. "Live 95" (95.9) covers all of the city proper and most of the surrounding metro with a format of predominantly "street rap" and hip-hop music. The "F" word and all it's variations get regular airplay here, generating numerous complaints from local residents and owners of licensed stations alike. Reportedly, the FCC knows exactly where the signal is coming from and who is operating the illegal transmitter. Yet, apparently nothing is being done to silence it. Why not?

374. Antique KCBQ AM Transmitter Control for sale

Newsgroup: rec.radio.broadcasting
Date: 2000-01-24 00:00:00 UTC
From: Jeff McNeal <editor@ohms.com>
Message-ID: <d3%i4.2284$2z.14955@newsr1.san.rr.com>
Source record: 21230

If you're into collecting antique radio memorabilia, then check my auction on eBay:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=243631225

I've reluctantly decided to part with the ORIGINAL, RCA AM transmitter control that was used at 50,000 watt KCBQ AM in San Diego. This piece is a rare collector's item and at least 50 years old. The bakelite rotary pots, VU, volt and amp meters are all in great shape. I saved this gem from the scrap heap nearly ten years ago while working mornings at KCBQ FM. The original AM transmitter area was being converted to office space and this unit had long since been retired with something more compact and modern. The GM was going to have it hauled off and I asked if I could have it instead. It's been stored in my garage ever since. Good luck if you decided to bid on this outstanding example of vintage broadcast memorabilia.

Best wishes,

Jeff McNeal

AM in the middle of a steel and concrete building.<

One question about reception is easily answered ---

No streaming audio yet. This 3rd incarnation of WMEX as a talk station has registered an internet domain http://www.wmex.com/ but as of this posting there is no content on the site, or a stream on Yahoo's
http://broadcast.com/

The rest depends on where you live and whether the work is done ---

If the CP for 40kw-day / 22kw-night (both directional) is complete you have a much better chance for on air reception than a winter debut in Boston (Jan sunrise 7:15am, sunset 4:45pm) than for a station currently licensed for 1kw-day / 3.3watts-night. The transmitter site in Framingham will send the new patterns N+NE toward the heavily populated northern suburbs.

Dean Johnson's article (which Al cites) is at
http://www.bostonherald.com/bostonherald/entr/radi01242000.htm

Mary Montanari has multiple articles about WMEX at
http://www.radiodigest.com/boston/

If Gene Burns does specific content for WMEX, he might appear via ISDN from San Francisco. That's what they use to backhaul his KGO show to the Boston area's Talk America Network for syndication.

Actually, I know several legitimate stations in small markets that do this all the time. They get a very loyal listenership. It's usually a sponsored event. I was listening to one this weekend. After the funeral report, the announcer's outro was "...hometown radio, where we play BOTH Country AND Western!" (Really!)

That's about the same thing as signing off.

I think that it could work quite a bit better than that. After all, I'm
20 miles from one major city that does own its own radio station --
Dallas' classical formatted WRR, which pulls somewhat respectable
ratings.

I wondered the same thing -- there was an Hispanic religious pirate (later the station went bi-lingual) running at 99.9 FM in Lawrence, just around the corner from us. The station also went on to simulcast - they opened up an AM outlet at 1680. There were other "part 15" stations with very wide broadcast ranges for "Part 15"s running between 1600-1700. Last summer they all disappeared.

Over in the FRN, I made some jokes -- they were busting pirates in Miami last winter. It made sense. If it were January, and you had to go make a pirate bust, and you were at the FCC and had your pick of spots to go, you'd be crazy if you wanted to go to Lawrence, Massachusetts! You'd rather go to Miami, wouldn't you?

But seriously, it's also a matter of how much backlash the FCC would receive. Does "Live 95" appeal to minorities? Does it interfere with other stations? Does it sell and carry advertising, or is it just being run for amusement of the operators? Do the owners of the station thumb their nose at the FCC, so to speak, or do they just play music? If it were shut down, would the FCC receive positive or negative publicity from residents in the area?

I would think all of these are considerations when the FCC chooses which station to go after.

As a quick footnote to what we've said, in the real TV Guide, whenever there's an infomercial scheduled, instead of them writing 'Infomercial' or 'Paid Programme', they list nothing for that time period on that station. I guess they're saving that ink so they can use more of it to advertise their web pages and crossword magazines,etc...?

Given the heat that FCC has had to take in the last two years for
shutting down a couple of popular pirates, the expense of the
ensuing legal actions, one of which reversed the FCC's decision, and
public relations nightmare, they may be much more circumspect in
busting pirate FMs. As with other regulatory agencies, they have to
build airtight, publicity proof cases. Merely breaking the law is
not enough anymore, look at OJ Simpson.

But the real reason they don't bust these particular pirates is
a little known clause in Florida law. To wit: Only Michael Eisner
has jurisdiction in Orlando.

And you thought FCC was a Mickey Mouse outfit!

> regardless of whether or not the FCC thinks (s)he can.

Umar:

Fraid I have to disagree here, coverage area that the station can lay claim to is what was on the original technical brief...end of conversation in my opinion.

The application I was referring to in the previous post was not the competing operation in the other city to which you could not intervene, it was the original one that your station founder submitted describing the area he wished to serve. The whole idea of frequency protection and extended coverage area in excess of that originally accepted in the "contract" between you and the FCC on the day the licence was granted is your coverage area is, of course, controversial.

If the idea of zero interference or overlapping coverage areas were taken to its furthest extreme, we would only have a hundred or so AM's and about twice as many FM's. Obviously, this grossly overexaggerated example is unacceptable, as is the concept of never approving any other stations because a fringe area station claims it.

As a station owner, I could claim that somebody using a 300 foot tower and a stacked series of yagis could hear me from 400 miles away on a morning with troposheric ducting and therefore no other station should ever be approved in the area of that one listener.

Just my point of view on it folks....as the expression goes "Your mileage may vary."

Regards,
Lee Smith

Doubt it. KQV was a Pittsburgh, PA station, Chart was a Florida label.
Not likely the twain would meet, but you never know.

For Norm only, who's a rock & roll guy only (or he'd know what KQV is - was): Jeff Christy is Rush Limbaugh. Now someone has to explain to Norm who Rush is.

I beleive one of the many post-Garabedian owners of 1060 turned in the
license and took it dark for several years. I believe the current
1060 is a different license. They may have some night time power
authority, but it's barely enough to cover the parking lot. This
frequency (as well as 890 and 650) has a strange, very involved, very
confusing history. Hard to tell the players even with a scorecard.

I was in Rome over the holidays, and can report that the FM band was close to that point there -- I didn't hear any stations that were 200 kHz apart, but did note spots on the band where I could receive two strong stations that were only 300 kHz apart.

> I don't envy those
> who have to pick a point between these extremes...

It's a tough balance for sure. However, I can't help but notice that the $40 Aiwa AM/FM/cassette boombox that I was using was able to distinguish stations 300 kHz apart...

I want to get in on the new opportunity provided by
the FCC's creation of new licenses for low-power FM
stations.

Where can I buy the equipment I'll need? I need
turn-key stuff, not kits.

Is there such a thing as a book which will help me
get started?

Thanks.

>confusing history. Hard to tell the players even with a scorecard.

The current 1060 is the same license all the way back to the WGTR
days...but it's on tx site number 3 now.

Site 1 was the original daytime WGTR site in South Natick. Garabedian
replaced that with the 24-hour site (5 towers) on Sewell Ave. in
Ashland in the 1980s. WGTR/WTTP/WBIV never had an actual license
to cover for that 24-hour signal; it was a succession of STAs (Special
Temporary Authority) at various power levels as the station's owners
fought with Westinghouse over interference to Group W's KYW and WBZ.

Here's where it gets complicated: In 1994, the owners of the 1060
license traded it to Family Radio (the Oakland CA ones) for Family's
unbuilt 890 CP in Dedham. During October 1994, the 1060 programming
slowly transitioned over to the new 890, which shared the Ashland
site. In November, 1060 went silent. (For more on the subsequent
history of 890, visit <http://www.bostonradio.org/radio/wbps.html> at
the Boston Radio Archives.)

Everyone more or less assumed 1060 was dead and gone -- until Alex
Langer stepped in and bought the license for a song. He revived
the station as a 250-watt daytimer, running off the WKOX site in
Framingham along with WKOX itself and Langer's other station,
WRPT 650. With just days to spare before the FCC deadline for
license revocation, 1060 came back to the air in February 1997 as
WJLT, religious "J-Light."

Which brings us to Act Four, this month's rebirth of 1060 as
WMEX, a 40-kilowatt daytimer. Langer has several applications for
night power, but without access to the old WTTP/WBIV night site
(which is still in use by WBPS 890), the NIMBY factor will make

them difficult to carry out.

Clear as mud?

[For more on the 1060 saga, stay tuned to NorthEast Radio Watch, <http://www.bostonradio.org/radio/nerw/index.html>.]

Most major manufacturers build equipment that will fall within LPFM limits. Many exciters will work. Some VERY well. Crown International manufacturers LP transmitters, at, surprisingly, very affordable prices.

Check with any major supplier, Broadcaster's General Store, in Ocala FL, for example. They'll be glad to find you what you need. www.bsgfl.com

> > "Coverage area" means anywhere a listener can receive one's signal,
> > regardless of whether or not the FCC thinks (s)he can.

This is one part of LPFM not even the FCC could agree on: what radios are we going to protect?

On the one hand, assuming an unreasonably good radio requires an excessive minimum spacing for co-channel operations. On the other hand, assuming an unreasonably bad set requires an excessive minimum for adjacent channels... (my car radio has absolutely no problem separating stations 400KHz apart regardless of relative strengths, but I have some portables that have trouble with 800KHz..) Do we assume a cheap radio, and leave unused gaps in the band for those with good equipment, or do we assume an expensive one, and make some stations invisible to those with cheap sets?

Taken to an absurd extreme, a given city should only have one AM station; if there are two, people with untuned crystal sets will suffer interference. Taken to the other absurd extreme, FM stations could be assigned every 200KHz; just use better IF filters. I don't envy those who have to pick a point between these extremes...

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

Oh Steve:

You may be a good writer, but your reading leaves something to be desired :-)
Somewhere below it says "hit records". Would you please tell me "where" this
break-in record by KFWB Sports director Cleve Herman was a hit?

Just because you and I both have this in our collections does not make it a hit.

If it charted in the top 10 on KFWB I'll consider it a local hit.

If it charted anywhere on rival KRLA, I'll consider it a local hit.

Norm K

I have a 60-minute non-telescoped aircheck of a guy named Tom Campbell
(my hero at the time) from 1966 or 1967. It's top-40 stuff from WONE-am
Dayton Ohio. If you're interested I can dub and snail-mail. I don't
want to take the time to telescope -- I kind of like to listen to the
music, too.

For a while I was using emp3encoder (I think) but I can't remember where
I got it.
Now I use Cool Edit 2000 (upgrade from Cool Edit 96). It reads and
writes MP3's WAV's and other formats. It also now has multi-track and
advanced noise reduction plug-ins.

Well, I posted the following 2 messages late last night, but do to what I am assuming is the robomoderation, my anti-spam didn't allow a message to be sent to me to confirm, which means they'll never be posted. So, I have to hope that I don't get spammed now, correct?

Anyway:

Well, I noticed this on Thursday, so that narrows the day down one (16-20). Today I was listening again, probably been about 15 minutes of it, when all of the sudden it broke off, and an anouncer said "KSNU Roy". Then it started again, and instead of looping without a break, at the end of the song, it sounded like someone moving the dial on the AM band, then it would start over. This happened for 2 loops, then I had to stop listening (this was on the drive from SLC to Ogden). This was about 10:30-11:30, somewhere in there.

Then, a couple of hours later on the way back to SLC (2:00?), I heard other older songs, and finally a station identifier saying, if I remember correctly, "Fever, the Moving Oldies". So, looks like for now it's an oldies station, we'll see how long it lasts at that.

Also, I don't know if you've heard of SaltLakeRadio.com
(http://www.saltlakeradio.com), but I recommend it. They usually keep up on the

latest things going on in the state. Here's there excerpt that I just read
after posting my first reply to you.

"I've got a fever of 107.9! 1/25/99
The half-baked stunting is over and out has come a pretty intriguing format -
"movin' oldies." They call it,
"The Fever - 107.9." In the hour that I listened, I heard everything from
Aretha Franklin's "Respect" to
Donny & Marie's "It Takes Two" to Santana's "Black Magic Woman" to War's "Why
Can't We Be
Friends." with plenty of disco and jammin' oldie tunes in between. "The Fever"
appears to be on autopilot
for now. I give it a 6, though it has a funky beat and I can dance to it. It
certainly beats Christmas in music
in July (or a Night Fever loop for that matter!)

AllAccess reports: At NOON today DEER VALLEY's FEVER 107.9 UTAH's MOVIN'
OLDIES/SALT
LAKE CITY was launched. The first song was KOOL & THE GANG/Celebration. The
positioning includes
music from the 60's, 70's and 80's including MARTHA & THE VANDELLAS/Jimmy Mack,
SANTANA/Black Magic Woman, and MADONNA/Borderline heard in the first hour."

420. ANN: Saturday Light Brigade Public Radio Netcast

Newsgroup: rec.radio.broadcasting
Date: 2000-01-26 00:00:00 UTC
From: Larry Berger <slb@telerama.lm.com>
Message-ID: <s8uudh3u7q5172@corp.supernews.com>
Source record: 21176

The latest series of folk music, features and family fun is available free for on-demand listening at www.slbradio.com or http://musicsojourn.com/Playlists/SLB/slb_sg.htm

This week's show features The Weavers, Mustard's Retreat, Bill Staines, Sweet Honey in the Rock, Peter, Paul & Mary, Mary Flowers & Vicki Taylor, Jeanie Fitchen, Anne Hills, John McCutcheon, Liv Taylor, Gordon Lightfoot, Tom Payne, Tom Lehrer, Dave Van Ronk, , Tony Furtado & Allison Krauss, Laurie Lewis & Kathy Kallick, Pete Seeger Janet Pazzynski, John McCutcheon, Ewan MacColl, John Lithgow, Jeff Warner & Jeff Davis, Emmylou Harris & The Nash Ramblers, Pete Seeger, Ellis Paul, Neil & Leandra, Kathy Kallick, , Tom Paxton, Nan Hoffman and more.

Puzzles, games, and features include Historiddle, Brigade Charade Puzzle, Common Thread Puzzle, Saturday Stumper, Guess Who, Listener Birthday Greetings, and the Two in Front Game.

"The Saturday Light Brigade" is a nationally award-winning family-oriented weekly public radio show that has been a Pittsburgh public radio tradition for 21 years. In addition to this latest program, past weekly broadcasts of "The Saturday Light Brigade" (featuring traditional and contemporary folk, bluegrass, children's and novelty songs interspersed with puzzles and on-air telephone calls) are available at www.musicsojourn.com. The program also can be heard live Saturday mornings from 6 to 10 a.m. Eastern via www.slbradio.com and on 91.3 WYEP-FM Pittsburgh.

Music Sojourn.com is an Internet Music Broadcasting network and web site established in early 1998, specializing in showcasing the work of talented producers. Other Music Sojourn programming includes Echoes, a Public Radio International syndicated series featuring new music from Ambient to Celtic, which is carried on over 150 Public Radio Stations and has a listening audience of over 300,000. Music Sojourn also showcases Night Vision, a progressive rock program originating from WITR-FM, Rochester, NY, Progressive Rock Radio, produced by long time Pittsburgh Progressive Rock host & producer
Larry Allen, Celtic Currents, Soul of the Web, Ambient Caverns and more.

For more information, contact Scott Ericson at programs@musicsojourn.com or Larry Berger at slb@slbradio.com.

421. Bias in Programming Music? (91x Bryan Schock)

Newsgroup: rec.radio.broadcasting
Date: 2000-01-26 00:00:00 UTC
From: davidtan@cts.com
Message-ID: <388f7fd2.69539224@nntp.cts.com>
Source record: 21177

Take a look at this article:

http://www.sdreader.com/ed/calendar/blurt/
by Ken Leighton

"When Bryan Shock worked in
Denver, the Jacor people were
trying to drive him out of town."
That's what a manager of a national
recording act said of Shock, now
the program director of 91X.
Shock, he recalled, was successfully running a station that competed against another Denver station owned by Jacor.

"They dropped off a frozen turkey with a fork in it on his front lawn. You know, the 'stick a fork in it,
you're done' kind of thing.
He saw it as a threat. He
went to the trade
[magazines] and
complained that Jacor was
threatening his family,
complaining how Jacor
played dirty. Now look at
how he's treating people."

Shock returned to San Diego two years ago to run 91X. He had apparently patched things up with Jacor (now Clear Channel), which owns 91X. But the band manager, who spoke only on the condition that he and the band not be named, is saying that Shock is now playing the same kind of dirty tricks on his
band that Jacor played on him.

The manager claims that Shock has boycotted his band, purging the nationally known band's music off of 91X playlists. He said it goes back to a 1998 spat when 91X had a direct competitor with 92/5. The band played at an event sponsored by 92/5. Even though 92/5 went off the air a year ago, the manager says the boycott remains.

But it gets worse, says the manager.

"On occasion he has called up other program directors in the [Clear Channel] chain in other states and told them that he had a problem with the band. He asked them not to play our music. I think it would be good for Clear Channel to know this is a restraint of trade issue and it breaks a federal law."

"That's exactly the kind of thing that just got the Federal Trade Commission to
look into MTV's monopoly," said one insider.

The manager said over the years Shock has 86ed other bands who rubbed
him the wrong way and that he has also put certain record companies "out of
business." That's a radio industry phrase that means a station will boycott all
the artists on an entire label over a beef with the label or one of the artists on
that label.

Jack Evans, head of programming for all San Diego Clear Channel stations,
responds, "He would never keep a record off the air that is worthy of being
played." Evans said he was not aware of Shock lobbying other Clear Channel
stations not to play certain artists. "That has never crossed my desk. If in fact
there is something to that, I would need to talk with Bryan." Evans suggested
this particular tiff might not be with the band but maybe just with the
manager.

"He's not the only one who does it," said one insider defending Shock's
alleged practice of boycotting bands and/or entire record labels. "You have
pissing matches with everything."

"Radio isn't about music anymore," said another nationally connected insider.
"The 91X from the days of yore doesn't exist anymore. You have to do
whatever it takes to protect your radio station and the artists your station
plays. There are plenty of program directors who would take that stand.
That's just how it is right now. It's not a fun time to be in radio."

--Ken Leighton

Analysis:

No wonder we're not hearing the wide variety of artists 91X used to play,
even four years ago. This is an example of how dangerous some people can be
when it is the programmers' job to break out the new alternative songs, and
this biased person Bryan Schock is the reason why 91X sounds like a Top 40
Modern rock station as opposed to the sound of 91X ten years ago.
When the programmer has a grudge against not one, but several artists, then
it gets pretty ugly.
Boycotting bands..boycotting artists...it adds up to 91X sounding like pure
junk to me.

Try the back pages of Radio World and Radio Shopper, both of which have websites.

<http://www.rwonline.com>

<http://www.radioshopper.com>

In both publications, companies selling low power low cost gear advertise. Although I know nothing of the quality of their products, OMB America comes to mind for low priced antenna, and a company named Superior Broadcast Products here in the Dallas area advertises low priced transmitters.

Another source of low priced transmitters is Bext, which is at <http://www.bext.com>

Good luck,

Tom Desmond

When I was at WMAQ in the early '70's , we used the -AM when simulcasting
ID's-during morning drive. Also at midnight, we id's as "This is WMAQ-AM, the
National Broadcasting Company in Chicago, Illinois." WNBC-AM in New York also
did this.

The FCC will probably require the use of type accepted transmitters
and excitors for LPFM. That equipment probably doesn't exist yet,
and could be expensive.

Well, no commercials yet, but that can change quickly.

It's not a bad idea. From what I've heard about other stations around the
country, this could be considered a Jammin Oldies clone. This should give a
little bit of competition to Oldies 94.1, which pretty much has a monopoly
on the oldies market here. There was the attempted competition with Magic
92 (at 92.1, which 107.9 was simulcasting for a few weeks, just to bring
this full circle.) Did Deer Valley own 92.1 when it was Magic 92?

Well, from the little I've heard, I actually don't like it. And that should say
something, considering my top three stations I listen to are 94.1, 103.5 & 105.7.

Also, I'm not sure how long Deer Valley's own 92.1, but I've always heard the 2 were linked together (well, at least for the past 5 or so years), that is, owned by the same people. Perhaps Deer Valley bought out whoever owned the 2 frequencies before?

Why wouldn't it? How many jobs did the newspaper eliminate when they automated their presses? Typical of the hypocrisy in newspapers when it comes to criticizing electronic media.

Burned -- ha ha ha. Our oldies station (KLDE Houston) has such a tight playlist I get burned after a week. I'm not sure how often they rotate stuff in and out, but there are a certain group of songs that run (seemingly) constantly as time marches on.

I remember last year being pleasantly surprised after hearing "Come on down to my boat baby" -- only to hear it over and over for the next couple of months!

The Houston Classic Rock station (KKRW) used to have a fairly tight playlist as well, but they seem to have expanded somewhat.

Anyway, it's easy to monday-morning quarterback, but it's hard to imagine why expanding an oldies playlist would hurt ratings. I understand the need for a "hot list" of a couple hundred songs that "test" well, but don't understand the complete absence of countless songs that were major to at least "minor" hits during the target time period.

I've given up on oldies radio and am putting my 45's and cuts from albums/cassettes on CD so I can listen to them in the car between playlist changes. It's only somewhere around 1500-2000 songs, but it beats the variety I get on the air.

I was just wondering.

What's the story on ASCAP, BMI etc license fees in regards to these "Internet" programs such as "Rock-it Radio"?

As an afterthought, how does simulcasting on the "Net" of a regular AM/FM station affect their license payments, if at all?

I have more questions, but I'll stop here and see what I get back in responses on these two.

from Rich Wood:

>Typical of the hypocrisy in newspapers when it comes to criticizing electronic media.

Yep. A couple of years ago, one of the AM stations I worked for at the time was taken to task in a editorial in the local paper, for airing several Trojan condom ads during an NFL playoff game. I forget the exact wording they used, but seems like they called it "tacky and tawdry".

In that same edition of the newspaper, in another section, was a fairly large and eyecatching ad for a local adult bookstore. They were promoting a visit from a porn film actress, complete with a fetching picture of the temptress. I guess they didn't have a problem with tacky and tawdry if they were getting a piece of the action (so to speak).

KTRS St. Louis on CNN!

St. Louis talk station KTRS (AM 550) gets a couple of shots on CNN Friday morning (just after 6AM and then again after 7AM, US Central Time), having been chosen from all St. Louis stations by the cable monster as the market's Superbowl radio rep.

Station anchors Dan Dierdorf (yeah, the NFL Hall of Famer and network sports commentator) and Kevin Slaten, along with Donn Johnson and former STL football Cardinal Jackie Smith will square off against some thundering herd of idiots from WWTN-FM in Nashville, the home of the Tennessee Titans.

Watch CNN or listen online at http://www.ktrs.com!

Message-ID: <v34k4.1222$Wm.328513@tw11.nn.bcandid.com>
Source record: 21195

Eric Aiese
>.. thought WBUR was a real powerhouse in Boston, like Top 5, but they don't shop up in last summer's book. Am I missing something?<

WBUR is a very strong presence. Especially in drive times.

Known nationally as the orginating station for public radio weekend staples "CAR TALK" and "ONLY A GAME," WBUR is a mix of NPR News & Talk, BBC World Service with a strong commitment to local news, in a service area that has now expanded to cover Eastern Massachusetts and all of Rhode Island. See commons.somewhere.com/bostonrw/1998/Boston.Radio.Watch.10-04.html

But with Arbitron, you get what you pay for, plus some rules about how the information may be used.

For example, if a subscribing station buys the data for use with Arbitron's Maximiser software, they get listings that reveal listening to ALL stations in the market. However, if
that station just buys the paper version (the traditional "Arbitron Book"), only commercial stations are listed.

If a station doesn't subscribe they are not legally able to distribute the ratings themselves, but may point to various media sources which Arbitron allows to publish what are called "Top Line" 12+ numbers. These are for the whole audience over the entire week for commercial stations only. And that is what shows up online at Radio Digest or Radio & Records, who don't get the information about demos and dayparts which lets many stations claim victory in small battles of their own choosing.

WBUR claims consistent top 10 finishes within 25-54 adults
wbur.org/information/about/history.shtml

And they publish their specific info from Winter '99 at
wbur.org/information/underwriting/arbitron.shtml

Why no more recent numbers?

Many public radio stations feel they need less detailed (or less frequently updated) data to support their underwriting efforts than a full subscription to Arbitron would provide. So they get their numbers from Radio Research Consortium, a non-profit, independent research firm that has provided lower cost audience research services and analysis to non-commercial radio since 1981 using Arbitron's raw data.

RRC subscribing stations can quote their own audience estimates, but a condition of the lower cost packages is that they do so without revealing other stations ratings. Read about the specifics at

www.rrconline.org/rules.html

How come there isn't an all-news radio station in the Phoenix area? We are the 6th largest metropolis in the nation, and all the larger ones (Philly, Bay area, Chicago, L.A. and New York) all have all news stations. The only news radio here is every half hour and when it breaks-the rest of the day is all talk. KTAR used to have morning and afternoon drive-time newscasts, but they've been converted to talk shows. The other news-talk stations here have always been all-talk, with news on the hour, on the half,and when it breaks. Any thoughts? An area this size needs an all-news station.

The sites that I listed are sources that provide back up transmitters
for fulled powered stations or the main transmitters for translators and
low powered non-comms. Since these are applications that require type
accepted equipment, I can see no reason why the same gear shouldn't work
just fine for LPFM stations.

That's an interesting question, because I thought equipment was
type-approved to a service. I haven't paid attention to this low power
stuff, but is
it considered just a low-power category, or a separate service that happens
to use the same frequencies as the FM broadcast band? If it's the latter,
then I could imagine having specific constraints on equipment, beyond
the power level, to deal with the limited technical experience of the
broadcasters.

As someone pointed out in a email to me, don't run out and buy equipment
until you have a license in hand. A "construction permit".

>pander to minority and other special-interest groups?

Of course it will. If the FCC were really supportive of LPFM they
would have let it be a free for all. Let Billy Bob compete with
Bishops, Mayors and other pillars of the community.

This decision means everyone loses, but the FCC (politicians) get to
say they acted on a request by their constituents - now go away so we
can spend our PAC money.

It should be clear I'm not a proponent of LPFM, but I would much
rather have had a good decision I disagreed with than a bad one.

Which one is more "tawdry and tacky?" A tastefully done condom ad for
a product that's intended to prevent disease (especially in the age of
AIDS) or an appearance of a porn "star?"

Since no one I know uses a condom for fun I would imagine the porn
star (fun to watch) would qualify as tackier simply because of the fun
factor.

I used to work for the company that used to own the New York Daily
News. That would be interesting news to the unions who lost jobs in a
series of ownership changes and automation projects.

Ask the folks at the newspapers owned by News Corp in the UK. I recall
it being so serious that armed guards were needed.

The point is that newspapers compete with the electronic media and
also pretend to objectively critique it. A great example is the paper
that editorialized about stations running condom ads while they ran
ads for adult bookstores and porn queen appearances. I wonder if the
salespeople sampled the product.

92.1 was a locally owned signal in Tooele up until it was purchased by Simmons about three years ago. They started simulcasting KDYL on it while they upgraded the signal. The power was increased and the transmitter site was moved to a little knob just west of Grantsville. At the same time they experimented with a couple of different locations for an on-channel booster to service Salt Lake City, which is on the extreme edge of the station's flat-land contour. A site on Farnsworth Peak was decided on for a directional translator. Simmons tried the Magic format for a little while and decided that the signal was just not viable for solid ratings in the Salt Lake market. They sold the signal to Chris Devine (Deer Valley) about a year ago.

107.9 was owned by Gary (Wooly) Waldron up until about 6 months ago. Up until Simmons started upgrading the Tooele signal on 92.1, there was a translator for 107.9 at 92.1 on Ensign Peak (above the Capitol). At that time the format was hard rock (K-rock, I believe). Gary leased the signal to Trumper in 1997 and they started programming it with big band and lighter pop (KSNY). He then leased 106.9 from Brent Larson and put the Krock format on it (and it's translator 103.1). Trumper then acquired 106.5 in a trade for AM570 with Jacor. They decided to dump the lease on 107.9, buy 106.9, and move 106.9 further north so they could put 106.5 on Farnsworth Peak. After Trumper's lease on 107.9 expired Gary Waldron shopped the signal to the other groups in town with no takers. Deer Valley just recently completed purchase of this second fringe signal late this summer. That's when it started simulcasting 92.1.

You wrote:

>The 22-kW application is for critical hours, not nighttime. KYW is apparently still too close to WMEX to permit nighttime operation.
The first sentence is correct. The second is incorrect--at least in theory. WGTR/WSTD/WTTP/WBIV and other calls I've probably missed, operated unlimited time beginning in 1981 (August, if I recall correctly) until the Sewell St, Ashland site was taken over by 890 in (I think) 1994. After that, there were several applications for 1060 to diplex from the site. One of those, for 1 kW-D/0.0033 kW-N ND-U, still appears in the FCC's public AM database. However, the previous owners of 890 were unwilling to have company at Sewell St after they worked so hard to get the array licensed for 890. Also, the 1 kW ND-D part of the 1060 application to diplex from Sewell St would not fly. You will note that when 1060 returned to the air as a ND daytimer in 1997, the day power was only 500W (from WKOX's towers which, counting the top load, are about 188 degrees at 1060). More than 500W day power from a half-wave tower in Framingham or Ashland would apparently cause prohibited overlap with KYW's daytime 0.1 mV/m secondary service. WGTR's original ND-D operation (starting in 1972) from Kendall Ave in S Natick used 1 kW but from a 140' tower (only 54 degrees at 1060). The inverse-distance field was just 175 mV/m at 1 mile--the minimum for a Class II-D station and also the maximum the FCC would grant. WMEX's CP for 40 kW-D from the WKOX site shows an inverse-distance field of <280 mV/m at 1km along the axis of the towers to the south-southwest. This field is equivalent to what the station was radiating using 500W ND from the same towers.
The first 1060 CP for the Sewell St site specified 25 kW-D/2.5 kW-N DA-2 using all five towers of the in-line array day and night. The inverse-distance field over a broad arc to the west of the TX was supposed to be limited to 12 mV/m at night, but the array could not be adjusted within spec and, as far as I know, the station was never allowed to operate with much more than half of the power specified in the CP and never received a license for the full-time operation. The half-power operation was under a special temporary authorization.
I rather doubt that Langer has any plans to put WMEX on the air full-time. However, the station has and is using a PSRA and a PSSA. The PSSA allows operation until two hours past local sunset. Except for the 15 minutes between local sunset and Philadelphia sunset, the pre-sunrise and post-sunset powers are extremely low; I doubt whether the signal is listenable beyond downtown Framingham on the south or Framingham Center on the north. The current PSSA and PSRA may be for ND operation, though. After WMEX receives a license to cover, it may be granted a PSRA and PSSA for directional operation at somewhat higher power. I think that 500W is the maximum the FCC allows. If they can get that much, the signal would be listenable in much of the west-suburban area.

What still baffles me is WMEX's 40-kW D power. WGTR's CP for Sewell St restricted the signal over at least 90 degrees to the east of the TX to an inverse-distance field of 1330 mV/m at 1 mile. Langer's original application for high power for what is now WMEX was for 50 kW from 240' towers to be located at the former Unisys property on Route 117 in Sudbury. The grant was for 40 kW, however. I assumed that the FCC cut back the power to 40 kW to avoid overlap of 25 mV/m contours with WBZ. When Langer was unable to obtain a building permit from the Town of Sudbury, he applied for and was granted a move to the WKOX site. The towers there are 440' high and are top-loaded, making them considerably more efficient than the 240' towers specidfied in the original CP. I don't understand why the authorization to move to the WKOX site wasn't accompanied by a reduction in day power to 26.5 kW, which would produce about the same field as 40 kW into 240' towers. The modification that was made was to specify a slightly different CH pattern with reduced power (22 kW) and sharp nulls at 180 and 250 degrees. Howevwer, compared with the 40-kW D pattern, radiation along the 215-degree axis of the towers is higher (equivalent to over 1 kW, probably because KYW's secondary ground-wave service need not be protected during CH).

Date: 2000-01-28 00:00:00 UTC
From: Andrew Harmantas <frisco484@worldnet.att.net>
Message-ID: <86itsl$1ha$1@bgtnsc01.worldnet.att.net>
Source record: 21110

Over a year ago, someone on this newsgroup posted a URL for a list of radio stations around the world. The pages listed stations by country, by program format, and by streaming technology. Each station entry that was broadcasting on the web was in hypertext and I could click on their web cast directly from this page. It was a very comprehensive listing. Each country grouping had that nation's flag. The background of the pages was a dark blue. Does this ring a bell with anybody?

I had a disc crash and lost all my files, and can't seem to find this one after many searches. If anyone has this URL, please post it.

TIA,

Andrew Harmantas

454. Rock-it Radio show #135 offers rare oldies on the net

Newsgroup: rec.radio.broadcasting
Date: 2000-01-28 00:00:00 UTC
From: Benton Owsley <rockitradio@earthlink.net>
Message-ID: <tMpk4.5532$%87.189535@newsread1.prod.itd.earthlink.net>
Source record: 21111

Hello again everyone,

Well Lane's latest and greatest sensations is now available here on
Rock-it Radio. On the Memory Lane show.... It is Rock-it Radio show #135
and is a mix of Rockabilly, R&B and Doo Wop all thrown in a great 90
minute package. To listen just go to our archives page at
http://www.palmsradio.com/rockittext.htm
and then click to show #135.

Here is the description and playlist of the show.

This Memory Lane Show features host Lane Quigley answering a number of
listener requests, showcasing some new additions to the Memory Lane
Library,
and sharing some great forgotten 45's from the fifties and early sixties.
Along the way, we shine the Memory Lane Spotlight on Maurice Williams,
enjoy
a rare rockin' upbeat offering by The Platters, share the original version
of
a song that sold a million for a British group, and get to hear the
original
lyrics of a song that later became a top 20 hit for another group on the
same
record label.

Here's the playlist....we hope you enjoy it!

1. That's Why (I Love You So) - Jackie Wilson [1959]
2. Two Faced Woman - Nappy Brown [1954]
3. I Wanna - The Platters [1957]
4. Fanny Lou - Frankie Marshall [1955]
5. Betty Lou Got A New Pair of Shoes - Bobby Freeman [1958]
6. Baja - The Astronauts [1963]
7. Where Did You Stay - Fats Domino
8. Diddley Daddy - Bo Diddley [1955]
9. Devil That I See - The Penguins [1955]
10. Sixteen Chicks - Joe Clay [1956]
11. It's a Treat - Otis Williams & His Charms [1960]
12. I Can't Love You Enough - Laverne Baker [1956]
13. Tell Me You're Mine - The Flairs [c.1955]
14. Doodle Doodle Doo - Gene & Eunice [c.1956]
15. Little Darlin' - The Gladiolas [1957]
16. Come Along - Maurice Williams & The Zodiacs [1961]
17. All Night Long - Joe Houston [1953]
18. Bigelow 6-200 - Brenda Lee [1956]
19. Stormy Weather - The Leaders [1955]

20. That's My Little Suzie - Ritchie Valens [1958]
21. Groovy Kind of Love - Patti LaBelle & The Blue Belles [1966]
22. Blue Suede Shoes - Elvis Presley [1956]
23. Sugaree - Hank Ballard & The Midnighters [1959]
24. The Return of B.O. Plenty - Morris Lane [1951]
25. (Baby) Hully Gully - The Olympics [1959]
26. Satan's Theme - The Rondells [1962]
27. I Hear Bells - The Dell Vikings [1961]
28. Zing Went the Strings of My Heart - The Furys [1963]
29. Rock-a-Beatin' Boogie - The Treniers [1953]
30. Week End - The Kingsmen [1958]
31. Too Good To Be True - The Casinos [1964]

Take Care everyone,

Bennie Dingo

You damn better well assume what people actually use. That is,
if you can buy it, and it sells well, that's what you design for.

Or, alternatively, of course, the FCC could either require minimum
specs for radios or require that the actual specs be prominently
and accurately listed in the sales material, especially the critical
ones like selectivity and overload capacity. And, like cars,
require that any manufacturer offer a certain fraction of
sets of all categories that meets highs specs.

> Taken to the other absurd extreme, FM stations could be
> assigned every 200KHz; just use better IF filters.

No, this will simply not work, period. IF filters won't work.
It has to be RF filters. I speak as someone who lives 1/3 mile
from a 50 KW FM station on a short tower. Or RF amplifiers and
first heterodyne stages that can put up with say 1 volt of
input without any form of distortion.

I would have to agree with cool edit, I downloaded the demo, and then
bought the program. The demo showed me enough to sell me.
It also will convert the file into cda's for cd burning.
You can get very tight edits, the kind reminiscent of Reel-To-Reel's.
Vacuum not needed.

I now have a 30 minute version of "Brand New Day".
- drives my son nuts.

Is that the top half, or the bottom half? ...For the good witch, or the bad witch? :-)

Seriously though, does anybody, have a TV Guide, in their area, that is cable-specific?
In Manatee County, they have two versions for several years now. Superimposed diagonally as a forward slash, over the TV Guide logo, it states if it is the cable version. Here in Sa-ra-so-ta County, there is just the one for the Tampa-Sarasota edition, which covers all of the stations from Tampa to Ft. Myers.
I thumb through it in line, but very rarely purchased it - no radio listings.

>How does one catergorize oldies?
>What is considered in placing a song in a hot or power rotation etc?
>

Most stations in medium and larger markets do Auditorium Music Tests, perhaps twice a year. People are selected to participate based on fitting into a desired age/sex pattern and choosing an Oldies station as their favorite (or showing a strong interest in listening to Oldies as one of their choices). Perhaps 100 to 120 people participate. At the test, they listen to about :15 seconds of 600 to perhaps 1,000 songs over a one or two night period. At the conclusion of the test, they are paid fifty to maybe one hundred dollars. From the results, the station breaks out percentages of familiarity, percentages of those who like or love the song, etc. From this they place perhaps as few as 150 to as many as 700 to 1,000 songs in rotations. Those titles with the highest "scores" roate the fastest. Those which are questionable might rotate slower, or not at all. Usually, songs are also rotated by era (for instance, Pre-Beatles, Beatle years, Post-Beatles, etc.).

463. TO KILL LPFM, NAB MAY PLAN DEATH OF *EXISTING* COMMUNITY RADIO STATIONS

Newsgroup: rec.radio.broadcasting
Date: 2000-01-29 00:00:00 UTC
From: wrfr@aol.com
Message-ID: <20000129001155.03696.00000161@ng-fi1.aol.com>
Source record: 21119

There is a very real possibility that the Low Power FM service will be slaughtered in the womb before it even gets a chance to provide any real opportunities to compete with the developing Brodcast Trusts of Clear Channel etc.

EVEN WORSE : The death of *existing* community and college radio stations may be imminent!

==========
In going thru the comments regarding the Digital Audio Broadcasting Proposal, y'all will LOVE the Sony Comments!

Basically, it calls for
1) DOUBLING THE BANDWIDTH
(space on the FM dial) given to FM radio stations
from 200kHz to 400kHz

2) AND MANDATORY SUNSET OF ANALOG.

This means:
1) No 2nd adjacent for LPRS *EVER*
This in SPITE of the FACT that the National Association of Broadcasters *themselves* defended the use of 2nd adjacent frequencies for multi-thousand
watt broadcasters. Without *also* allowing LPFM stations to *also* use the second adjacent frequencies, most larger metropolitan areas will see few *if any* LPFM stations!!!

2) No room for pirates ... no American Civil Disobedience possible!!!!

3) Likely death of existing small independents, religious, community and college radio stations that can't afford the mandatory Digital by the sunset date!!

This means that as bad as the concentration of ownership by the Clear Channel mergers has been for programming innovation (that is, for minority interest groups getting their music and views out) ...

IT IS ABOUT TO GET WORSE
WHEN COMMUNITY AND COLLEGE RADIO
IS KILLED OFF!

AND THE ROOM ON THE DIAL FOR CIVIL DISOBEDIENCE IS CONSUMED.

AND THE MAJOR METRO AREAS THAT WOULD *MOST* BENEFIT FROM THE LOW POWER FM SERVICE WILL NOW *NEVER* GET LPFM STATIONS!!!

Check out some excerpts from the Sony comments on 99-325
(however, there are some juicy admissions on their part we can use if we pull out the BIG GUNS of public opinion on this!!)

==========

Julio Posse, Sony Electronics Inc. 1/24/00

"...Sony Electronics Inc. recognizes the inevitability of terrestrial digital radio and the exciting benefits it can offer the consumer in the future."

" One obvious lesson that is sometimes too easy to ignore when enticed with new technology is the importance of weighing value against the cost to the consumer."

SIDE NOTE:] The reason that Sony thinks it is important that Broadcasters be allowed to use packetized digital to deliver audio is that there will soon be wireless surfing of the Internet audio sites.
Why does this prove anything? Digital or not, the vital difference between Internet (wireless or not) is that the Internet is point-to-point where the content is chosen and started by the individual user. Broadcasting (digital or otherwise) is reversed where the *SOURCE* edits and chooses the content! This means that this is a comparison of apples and oranges. Digital Audio Broadcasting has NOTHING in common with Wireless Internet bitcasting other than that the audio is packetized bits of digital data. But from the user's point of view, they could not be more different!!

"There are many emerging technologies that will offer broadband Internet access. Services for fixed applications will be offered by DSL technologies, Cable Modem, LMDS and satellite services at s-mKu- and Ka-gands. It is simply a matter of time before the wireless industry can offer broadband Internet access to mobile applications, using point-to-point or broadcast connections and directly compete with Broadcaster markets. It is therefore important for the Broadcaster to be given the opportunity to convert to digital in the near future."

"The players (of Internet Audio files such as MP3) themselves are offering high quality digital audio and are increasingly becoming a more desirable alternative, in some cases, to the limited variety of music offered on the radio. This is, therefore, another reason the Broadcasting Industry needs to advance to a digital format and offer not only digital quality, but also an alternative pipe fo rthe value-added services offered over the Internet."

SideNote:] Who wrote this?!? They keep getting cause and effect mixed up. People are buying digital audio not for sound quality but for VARIETY. They practically say that themsevles but then inexplicably support a top-down system editing system of Broadcasting that Destroys the very variety that the Internet lives off of!
What Sony and the Broadcasters fail to realize is the power of the Internet music is NOT SOUND QUALITY, IT IS THE VARIETY AND THE FACT THAT THE CONSUMER DOES THE EDITING, NOT THE CORPORATION!! In the Internet, the USER starts the transmission, chooses the content of the transmission, NOT THE PROVIDER.

Thus if anything, the popularity of Internet Audio is a resounding rejection of the old "gatekeeper" model of culture distribution where a central set of "experts" tells us what we want to hear and serve it to us like so many drooling mental patients.

PAGE 2!!!!!!!!

"Sony additionally urges the Commission to mandate a fixed analog 'sunset' date in an effort to continue fostering a transition to an all-digital service."

SN] This after they themselves noted that "it remains to be seen whether or not the proposed IBOC system can attract a market larger than simply the 'early adopters' in the interim before an all-digital system is deployed."

So in other words, Sony does not trust this system to sell in the free market and they wish to force the issue on us!!!

Page 3:
"Sony has seen a very slow market penetration in Europe with DAB, which employs the Eureka-147 standard. The disappointing ramp-up is attributable to a service that offers little more than improved audio."

and then they condemn (accurately) the lack of anything worth buying a DAB for:
"... needs to be more of an empetus fo rthe averag consumer to adopt DAB. This empetus is either derived from a variety of new channels or new value-added services. S-DARS in the U.S. has chosen both methods. A value-added service offered by S-DARS, as an example, is commercial free radio broadcasting."

SN] In other words, greater variety of programming innovation ... like the Low Power Radio Service!!!!

Page 3
"As stated by the Commission, a system that permits stastions to implement an all-digital radio service rapidly may serve the public interest better than one that delays the opportunity to fully realze the benefits of DAB for possibly several years. Sony also recognizes the potential benefit of a fixed analog "sunset" date to foster a transition to an all-digital service and, believes one should not preclude the other. In fact, both may be necessary to stimulate the market to fully adopt the digital transition."

Page 4

: ... over the 12 years before the fixed analog 'sunset', proposed by USADR."

"In Europe, Eureka-147 sales have been very slow. This is largely due to there not being enough incentive for consumers to buy a more expensive radio for simply getting digital quality and very limited data services. "

Page 5:

"Today's technology will permit a spectrum efficiency of between 0.7b/s/Hz and 1.5b/s/Hz. With a 200kHz bandwidth, data rates between 140kbps and

300kbps are achievable. With PAC or AAC, near CD quality at 64kbps should be possible with enough link margin. However, in order to attract customers, CD quality at 128kbps (MPEG AAC) and a limited data capability is preferred. This still translates to a bandwidth of between 100kHz and 200kHz. Sony believes, however, that bit rates of 64-384Kbps are required to add enough value to attract customers to this new technology. The exact rate depends on wheter the service would carry text, a still picture or moving picture. This additional bit capacity would require a frequency bandwidth between 200kHz and 400kHz, which is equivalent to what is offered by the all-digital system. If these rates are attempted at narrower bands, the system becomes too susceptible to frequency-selective fading and compromises robustness."

"AM which offers a bandwidth of less than 9-10 kHz should accomodate FM quality audio and a very limited auxiliary data service. However, full stereo quality will not be available with a 9-10kHz bandwidth. A frequency bandwidth between 18-20kHz would be needed, given today's audio coding technology."

Side Note:] Has anyone asked the public if we would prefer several stations of the same audio quality (with new music forms and new news/talk programming innovation) or if we prefer the same "limited programming choices" cited above with slightly better sound?

We could get the latter by actually REDUCING THE SIZE OF EXISTING STATIONS AND LICENSING MORE LOW POWER FM STATIONS. Competition would equal a wider array of programming service options.

The Broadcast Trusts have proven that given the choice between competing with "programming innovation" and competing by buying up the competition and using government regulation to squash competition, then cutting staff to save money, the Broadcast Trust has consistently chosen the latter way of making more profit.

Why would they act any different with Digital? They will continue to gut and automate and reduce the variety available as long as real competition continues to evaporate due to the ologopolistic effect of the 1996 "reforms".

==========
END SONY COMMENTS AND ANALYSIS
==========

Thank-you for taking the time to look over this very important, however admittedly dry and eye-glazing issue.

Sincerely, Christopher Maxwell

Good luck in getting a license. Here's the FCC's order excerpted:

ï¿½73.853 Licensing requirements and service.

(a) An LPFM station may be licensed only to:

(i) nonprofit educational organizations and upon a showing that the
proposed station will be used for the advancement of an educational
program;

(or to government or non-government entities operating a weather/
travellers type service)

Anyone other than a school or religious broadcaster...forget it.

468. Radio station for stock market news that can be received in Nashua, NH

Newsgroup: rec.radio.broadcasting
Date: 2000-01-29 00:00:00 UTC
From: Howard Kaikow <kaikow@standards.com>
Message-ID: <3.0.6.32.20000129103220.007a8900@127.0.0.1>
Source record: 21124

What radio station can be received in Nashua, NH that has good stock market coverage during the day?

Is there a "business news" station in this area?

I would guess that some such station exists in the Boston, MA area.
Perhaps I can receive those in Nashua?

Somehow, I just don't see this spectrum grab working too well...if second adjacent IBOC digital reception is crippled by an overly wide bandwidth, it will severely hurt a number of FM stations in the Dallas-Fort Worth area, where second adjacent rimshots running from north of downtown are quite common. The result would be that the rimshots (which are owned by major companies like ABC, AMFM/Clear Channel, and SBC) would not be receivable near downtown Dallas, and the stations running from the main tower site for the area (Cedar Hill) could find themselves hurt in the rapidly growing northern suburbs.

I'm sure this situation is not unique to Dallas, so I really can't imagine the US broadcast industry and the FCC approving an IBOC system that can't accomodate these 2nd adjacent channels.

Just my opinion...

Tom Desmond
(in one of those northern Dallas suburbs)

Try the MIT List of Radio Stations on the Internet. The URL is
http://wmbr.mit.edu/stations/list.html . This may not be the one you're
looking for (it has a yellow background, not blue) but it does list over
2000 internet broadcasters.

More extremist hype. Fact is, there really IS NO LPFM!! All the FCC did was expand the number of channels that non-commericial educational stations may broadcast on. All those pirates out there who think they can get 100-watt licenses now, better think again. The only real beneficiaries from this are religious broadcasters, who no longer have to get translators...they can have real-life licenses. (I wonder how much money they contributed to the Gore campaign and/or the Democratic Party!)

You're kidding. Wow. Really? Would you care to address the actual question
in light of your insights? You may recall, that the poster wondered why
there is no all-news station in the Phoenix market. His question was not,
"Is all-news radio expensive to produce?" Now, I can't answer the question
about his market. I don't know enough about the market. But perhaps you
know more than you're posting.

So, GIVEN that all-news radio is expensive to produce, what is it about the
market in question that has resulted so far in there not being an all-news
station in it? Is the market to small, etc., etc., etc.

I considering purchasing this radio for improved reception of distant signals. I'm not overly concerned with the sound of the radio, mainly just the AM reception.

The reviews are good but I'd like to hear opinions from other owners before forking out the $$$.

Thanks in advance for any opinions,
Vic

>station in it? Is the market to small, etc., etc., etc.

I suspect we all know more than we're posting, but I was perhaps
expecting too much of my readers.

A great number of stations in markets smaller than the top five that
have classicly been all news, are adding more talk. Usually these
stations really have never been ALL NEWS, meaning that they ran talk
all night.

The cost of producing an hour of news that really covers a market
takes at least five people, you need street reporters, anchers,
probably either an assignment editor, or producer, or head writer, or
whatever you call it.

Plus it requires facilities, and people covering news run up expenses,
just like anybody sent out into the field to retrieve something.

KTAR didn't have a lot of intertia as a news operation. The signal is
adequate, but not the equal of others in the market. If KTAR had come
in with a signal that could have covered all the way to Tuscon, and
out a ways in the desert in each direction, KTAR might have had a
chance.

Or if there hadn't been good news operations at some of the full
service stations that started to die in Phoenix, KTAR might have been
able to have more intertia going into the 'aughts.

What we're seeing is the cutting away of expensive operations in
radio. Its playing out most visibly in markets the size of Phoenix;
they're big but they're not the largest metros.

In the smaller markets, the formats are all either completely
automated locally, or satellite fed with not one whit of local
content, save a commercial or two at the breaks.

What has absolutely amazed me about this whole thing, is how
computerphobic radio people have been. They're real happy to pay for
automation systems that allow you to walk away from the place, but

they don't want to spend money to automate systems that keep the quality of content high, while reducing BUT NOT ELIMINATING staff.

If these national chains wanted to, they could design an information format that gives you access to pieces done by folks in other chain stations all over the country.

The items could be put together by computer, using a production package designed especially for the task, on today's modern equipment which has some really awesome digital processing abilities.
'
You could do with half the staff, you wouldn't even necessarily need people in the station at all times, and you could do stuff that is just compelling in its production qualities.

Radio has to be something that creates a greater whole out of a sum of parts, but the unartful mechanization of radio has made it little more than a great big juke box with speakers in every town in America.

The only thing that radio has to offer, is its immediacy. CD's sound better, the internet is better to find niches, and with television you even get a picture.

But this kind of leveraging your assets doesn't seem popular with the suits, and I don't see why. They're too anxious to just cut it to the bare bones and pocket the money.

Its a given that they know more about this than I do. I left radio a long time ago, and these days I am just a listener, and often not even that.

Voiceover training is available in the Miami area at The Miami Voice Works. Introduction to Voiceover and Intermediate Voiceover training seminars are scheduled for February and March.

If you already do voiceover, but want to practice with other professionals, workout sessions are held on Tuesday evenings starting on February 8th. Read real copy and get immediate critique and direction.

This is NOT announcing. It is voiceover training that teaches voice acting, character keys and more. We don't teach you to read copy, we teach you to develop your voice and acting ability.

We have a fully digital 16-track recording studio, running through a 36-track digital console. We also assist in creating, or editing, your demo tapes.

Visit our website: http://miamivoiceworks.com

Best regards,

John Lovell, The Miami Voice Works
Voice-over*Production*Studio Recording

Source record: 21136

Try getting a MW loop antenna first, a foot-diamater passive tuned
circuit that sits next to your existing radio. Select-a-tenna,
the Terk loop, or the new Radio Shack MW loop range from about $50
to $30. These things really do work. There's nothing to them
but a large coil and a variable capacitor, and they work by
matching impedences better.

They all bring the external noise level above the internal noise
level of the receiver you have, unless your existing radio is really
bad beyond belief.

Once the external noise is above the internal noise, you do as well
as a more sensitive receiver can do, even if the more sensitive
receiver has a MW loop itself. The sensitive receiver hears the
same things the bad radio does, only with the volume set higher.

MW loops only useful in the daytime, when they extend your range
several cities away. At night, signals are already too strong
and you'll have a hard time saying if the MW loop is doing anything
at all, because the AGC circuits cancel the additional gain back out.

You can use the MW loop with the CCRadio, which by itself is not as
sensitive as any old radio with a MW loop, if you decide to later,
so the MW loop is not wasted.

The GE Super-radio III is as sensitive as the CCRadio, with much
better sound but worse dial calibration, for $39 at amazon.com.
It too can gain a little more from a MW loop. (More sensitive receivers
gain less but still gain something.)

If Sony wants to double the bandwidth of IBOC transmissions it's likely because they perceive that IBOC isn't going to work.

The real message is: go with Eureka 147. Did they not say sales of Eureka receivers in Europe were slow? What better way to sell more of them than to establish Eureka as the standard in the U.S.?

Eureka works. Let's do it.

Why not just forget terrestrial digital radio, which seems to be a
solution looking for a problem, and leave the digital systems to satellite
radio, where it has some advantage?

>

While Rich and I don't agree on lots of things, he has hit this one squarely on the head. The FCC didn't give potential LPFM broadcasters very much, but they may have hurt struggling small town broadcasters, especially those with daytime AM's. The Satillator guys have a much better deal, since they are able to ignore the issue of second adjacent protection, while LPFM can't. (I'm surprised that the Broadcasting Establishment doesn't scream like stuck pigs over this, since they sure did about LPFM and potential interference).

Do a few frequency searches and you'll find you can't even squeeze one LPFM station into some rural areas. Forget the cities. The satillator guys have the channels already, unless you want to go on the air with 100 watts from a location 75 miles southwest of Butt Montana.

Almost everyone lost in the deal, but in true government fashion they'll tell you what a "progressive" move they made. Sort of like having a guy knock on your door and say, "I'm from the IRS, I'm here to help."

<original examples snipped>

Okay, here's another possible one.

There was a Frank Zappa produced novelty record on Capitol in mid 1963. It's called "The Big Surfer" and was done by a Brian Lord.

I collect 50s and 60s station surveys in passing, and yesterday I got one from KMEN in San Bernardino from 1962.

There is a Brian Lord on the cover (along with the other jocks). I would guess that this was the same Brian Lord as on that novelty record on Capitol, right??

Also, I figure I might as well ask this. Anybody have any 50s/60s station surveys (originals, not copies) that they'd be willing to part with?

If you do, you can e-mail me about them.

Charles Hobbs wrote:
> Anyone know how well MW loops work with a Sony 2010?

As a matter of fact, I do... The 2010 is pretty bad at MW on its own, owing to processor noise. Any MW loop makes it shine, because of its selectivity and discrete sync detection, giving it enough signal to work with.

I notice the Radio Shack MW loop is only $30 and has an output jack.

You can't run a cable into the ext antenna jack of the 2010 because it attenuates MW heavily there. However, if you wrap 5 turns of wire around the 2010 and attach that to the output jack of the MW loop, it works pretty well, and you don't have to aim the radio as well as the loop to null stations out. Use a short audio cable for instance (1/8" mono phone plug) and perhaps put a 1/8" jack on the 5 turns of wire (matching the 2010 ext antenna jack, go ahead and try it too), and plug the MW loop into the 5 turns. You're set.

Direct coupling (without use of any jacks) works fine too, but you have to aim the radio and loop together.

In some areas the TV guide has too many cities on their edition. (Dont add any more!!!) In Milwaukee, you get Chicago/Rockford/Madison/Milwaukee, which covers just about every available channel. I sudder to think what would happen if low powered stations were listed for all cities. Many channels would be used more than once...Too much confusion...Most people I know use the local paper...

From: "The Horn Book, Inc." <hornbook@earthlink.com>
Message-ID: <3895B3F8.2075469F@earthlink.com>
Source record: 21054

I understand not having an all-news station in a smaller market, but Boston doesn't have a single one either. The one that advertises news "all day, every day," WBZ, does talk in the evening and at night with prerecorded newscasts (after midnight), skips news during sporting events, and has the audacity to market itself as "all the news you'll ever need."

New York has three all-news stations (WCBS-AM strays for specialty programming sometimes), and D.C., roughly the same size as Boston, has one terrific one. When I e-mailed WBZ with the question, I was written back to by someone telling me there's no call for all-news in Boston.

This from a station that positions itself as a news leader.

Cheers,
Alan

I doubt the CCRadio attenuates MW anywhere. However, impedence
matching might make it better to couple by just setting the MW loop
next to the radio, or by wrapping the same 5 turns of wire around
the radio and attacthing that via a cable to the MW loop, both
of which methods also work on the 2010. Both air-couple to the internal
ferrite rod in the radio.

It might also be that the CCRadio will accept a direct connection
to the ext antenna jack and the impedence match to the loop won't
be too bad, but who knows.

Probably because the typical satellator -- either American Family Radio
or a rebroadcast of a church station from Twin Falls, ID -- doesn't
really represent much of a competitive threat.

Needless to say, I tend to believe that interference is the excuse that
the NAB uses, not the real issue. Remember, they opposed LPTV too, and
the world didn't end in a blast of noise and static when they lost.

As far as I know, they are both "secondary", so it would be "first come first served", except the Satillator guy gets to run more power and ignore second adjacent protection.

The FCC's R&O on LPFM is printing as we speak (all 60 or so pages) so I may be more up to speed after I read it. What I've seen so far is not very encouraging. As usual the FCC tried to look magnanimous, but gave nothing. The preachers should be very happy though. They win either way.

Rob Landry <umar@world.std.com> wrote:

"The real message is: go with Eureka 147. Did they not say sales of Eureka receivers in Europe were slow? What better way to sell more of them than to establish Eureka as the standard in the U.S.?"

It won't help all that much, because U.S. Eureka receivers would have to cover a different band than European or Canadian sets -- meaning as a practical matter that the manufacturers would have to offer separate, dual-band versions of each model for North America (two different L-band segments for the U.S. and Canada) and Europe (one L-band segment, one high-VHF segment).

Note that Japan isn't going to Eureka *or* IBOC. They've chosen a system to fit an "Integrated Services Digital Broadcasting" concept where digital TV stations would transmit two signal components (one for video, one for audio) while digital radio stations, also in the UHF TV band, would transmit only the narrow-band component. Under this system digital TV receivers would also receive digital radio, and digital radio receivers would also receive sound and some data services from TV stations.

"Eureka works. Let's do it."

Eureka was designed to fit the European concept of multi-channel public broadcasters using multiple transmitters to cover entire regions. It doesn't work very well in a system where competing broadcasters own their own transmitters, almost always have only one transmitter for a given local service, and broadcast to differing coverage areas. IBOC, on the other hand, was designed from the start to mirror existing broadcast allocations and practices.

It depends on two variables...market size and cold weather/rust belt vs. sun belt.

There are currently only about a dozen all-news radio stations in the U.S. which are programmed locally. There are a handful that use either AP or CNN Headline News, mostly in small to medium markets.

There's about a dozen more like WBZ Boston which are all-news by day. WBZ runs talk nights and sports weekends, WMAQ Chicago runs sports talk evenings, KIRO Seattle runs talk outside drivetimes.

Another problem with Phoenix is location. The only all--news stations in a sun-belt city are in Los Angeles and Fresno.

Could it be that with decent weather all the time, sun belt residents don't care much about weather and news??? Here's the list...

WCBS & WINS, New York
KFWB & KNX, Los Angeles
WBBM, Chicago
KCBS, San Francisco
WWJ, Detroit
KYW, Philadelphia
WTOP-AM-FM, Washington
KQV, Pittsburgh (runs CNN overnight)
KMPH/KTRB, Fresno-Modesto (reruns tapes of previous hours during late nights)

Outside the U.S. (in English), there's also CKNW Vancouver, CFTR Toronto, CINR Montreal and News Direct 97.3 London.

Thanks for the info on Tom Campbell.

As far as WONE, I remember the station went MOR for a VERY short time (maybe only a couple of weeks) after its Top 40 stint - then switched to Country. WONE-am dropped a couple of years ago for "Music Of Your Life" or something similar. It bowed out because of an FM'er (WHOK??? co-owned with WHIO-FM which dropped beautiful music for country sometime in the early to mid 80's)

WONE's FM station (WONE-FM) was automated Top-40 at about the same time the am switched to MOR & Country with limited live programming. (note in the aircheck one ID says WONE -- then later it says WONE and WONE-FM.) I also recall Dave Michaels doing a live evening show on the FM. It was a long time ago and I was only about 10-years old, so my memory is foggy on the timing.

Then sometime around 1970 the FM's calls changed to WTUE and it went live top-40 -- unsure of the year. Good Bye WING! About 1975, WTUE changed to AOR and is, I think, still doing the same today.

I left Ohio in 1981, so my history may be somewhat inaccurate - I was keeping up via the trades and occasional visits to Mom and Pop.

WHIO-AM and WHKO-FM, K99.1, were co-owned by Cox Broadcasting along with Dayton CBS affiliate WHIO-TV, Channel 7, back in 1988-1990, when I lived in Dayton. Now, WHIO-TV appears to be owned by a local company, Miami Valley Broadcasting Corporation. (Dayton is located in the Miami River Valley, which is why I'm assuming that MVBC is a Dayton company. They have a Dayton PO Box as their mailing address.) WHIO-AM and WHKO-FM are now owned by CXR Holdings of Las Vegas, NV -- does anyone know if this is Cox???

K99.1 changed calls from WHIO to WHKO in late 1989, if I recall correctly. Also changed formats at that time. When I initially enrolled in school at the U of Dayton in Fall of '88, it was still WHIO-FM and still playing MOR.

>WONE's FM station (WONE-FM) was automated Top-40 at about the same time
>the am switched to MOR & Country with limited live programming. (note in
>the aircheck one ID says WONE -- then later it says WONE and WONE-FM.)

WONE-AM, WONE-FM and WTUE-FM were co-owned by Summit Broadcasting. WONE-AM and WTUE-FM were Dayton stations. WONE-FM is an Akron station (up near Cleveland). WONE-FM went AOR and is now classic-rock.

WONE-FM is now locally owned by a company called Rubber City Radio Group, Inc, along with sister stations WQMX-FM and WAKR-AM.

The WONE-AM calls are licensed to Jacor. In an interesting twist, the FCC web site shows WONE at 980 AM, in Alabama, not Ohio!

http://www.fcc.gov/fcc-bin/baps3?cxll=WONE (licensee mailing addresses)

http://www.fcc.gov/fcc-bin/amq?call=WONE

Yes.

Also, WING-AM is probably still doing oldies. Great Trails Broadcasting, owner of WING-AM and top-40 WGTZ-FM, bought Springfield's WAZU-FM and changed the calls to WING-FM. They were playing 70's last I heard, but that was a few years ago already.

WING/WING-FM/WGTZ are owned by Clear Channel.

Any of you that works in the Christian radio industry will know that the Wegener Unity 4000 digital satellite receiver is quickly becoming a standard piece of equipment.

The receiver offers a relay contact closure every hour at x:54.30 that can be used to synchronize a clock. Some companies have written programs to interface that closure with a computer's system clock. However, there is usually a considerable charge for the program.

I have written an interface program to synchronize a computer's system clock to the U4K's relay closure via a parallel port connection...and it's FREE! Just go to www.powwwer.net/~petersdw/u4k.htm and download it. The interface cable wiring and complete instructions are included on the webpage.

Fresno no longer. KMPH/KTRB has added quite a bit of talk programming
from formerly co-owned KFRE, after the sale of KFRE to a
Spanish-language operator.

To be fair about it, Fresno is not a big enough, or interesting
enough, market to support an all-news station and KMPH/KTRB never made
much of a dent in the ratings anyway. And they gave it a good try--at
least ten years on KMPH, IIRC.

>Could it be that with decent weather all the time, sun belt residents don't
>care much about weather and news???

I don't think that's it. It's a combination of economics (all-news
requires a very large market to be profitable because of the very high
overhead involved) and the characteristics of an individual market.
There's lots of interesting news in Los Angeles, but damn little in
Fresno. (I've worked there. Hands down the most boring, insular,
culturally out-of-it town I ever covered. Think strip malls,
everywhere). I'll confess to not knowing much about Phoenix, though,
so I can't really opine on the specific topic at hand.

It is, and so is Miami Valley Broadcasting Corporation.

I have some familiarity with the market. I worked in Dayton in 1970,
at what then was WAVI/WDAO(FM). I've also worked in the nearby
markets of Richmond, IN (earlier) and Cincinnati (much later)

If IBOC works, it will almost certainly not provide the multipath immunity
of Eureka-147. And why are separate transmitters and coverage areas an
advantage? Would it not make more sense, and save money, for broadcasters
in a market to pool their resources and share a single tower and
transmitting facility? Even in the most crowded markets there are
vacant UHF TV channels that would lend themselves quite well to
Eureka-147.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

520. List of the rec.radio newsgroups

Newsgroup: rec.radio.broadcasting
Date: 2000-02-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8782r6$8gn$1@news.hawaii.edu>
Source record: 21076
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

Source record: 21078

in the old days (60's-70's) stations typically took a poll of music
stores in the area to see what was selling, plus considered listener
requests/reaction, and often had a "new music meeting" with the music
director and program director to determine which songs fit the format
for the particular format and decide dayparting (what hours to exclude
airplay - often done for very heavy or soulful tunes). And yes, much
of it had to do with "gut reaction". Sometimes stations were a part
of a chain that had one national music director or program who would
decide what songs were added and positioned on all stations.
These days, Soundscan is used to determine sales. It literally tracks
every piece of music leaving stores at almost all record stores that
sell new music and is an efficient way of determining what is being
purchased locally and nationally. chart positions on leading trade
magazines has a lot to do with adds and local charting as well today
and in the past. Most often used in the 60's - 70's was Billboard.
Today Radio and Records probably.

Sacramento's Comcast Cable TV Guide edition is pretty much all you can buy now in the immediate Sacramento area. The "Northern California" edition, which lists the Sacramento, San Francisco, and Chico/Redding market stations along with some oddball stragglers, isn't sold even on newsstands in Sacramento County.

The "Comcast Cable" edition of TV Guide only lists the Sacramento/Stockton/Modesto market stations among the locals, since those are the only broadcast stations carried by Comcast (aside from another out-of-market straggler, KTNC/42 in Concord...technically part of the Bay Area ADI but a must-carry in Sacramento due to its proximity to this area).

WHKO. I want to say it was later than the mid-80s, but you could well be right. With their grandfathered extra antenna height, they're the only Dayton-licensed station to ever make the trip down here to Nashville. (though Buckeye 106.5 and amazingly enough, the 4500 watt religious station on 88.1, have also made it)

> live top-40 -- unsure of the year. Good Bye WING! About 1975, WTUE
> changed to AOR and is, I think, still doing the same today.

Yes.

By the way, WING is kinda sorta back, as a classic hits station on the 102.9 frequency out of Springfield. The calls never went away on 1410 AM either, though as you say the format has nothing to do with their top-40 days.

When I was growing up, there was a New England edition of TV Guide which covered everything from Waterbury CT to Portland ME. Yes, there were channels that were used twice.

We have several TV Guides available here because we live right on the line between the Boston-Providence edition and the Northern New England Edition, and there are a few different cable editions as far as I know.

You would think so, wouldn't you? One of the commenters said that there should be a 400 Km test --- if a translator's primary station is more than 400 km from the translator, the LPFM would get priority. If the translator's primary is less than 400 km from it, it stays.

This would open up more allocations for local broadcasting. I mean, if a New Hampshire translator's primary station is in Oklahoma or Idaho, I would think community service would prevail.

This thread started with someone asking why his market of Phoenix doesn't have an all-news station. Growing city, more than a million people, plenty of signals on both AM & FM...

But then LA is the only sunbelt city with a true all news station (KFWB & KNX). All the major all-news stations are in the cold weather rust belt...NYC, Chicago, Philadelphia, Detroit, Pittsburgh. There's also one each in DC & SF, sort of on the border. But Dallas' KRLD and Miami's WINZ long ago gave up all news. Houston has KTRH with all news in AM Drive, middays and PM Drive...but they run talk nights and weekends. KOGO, San Diego tried all-news about 15 years ago...it only last a year. There's no all-news in Atlanta, Orlando, Tampa, Charlotte, San Antonio, New Orleans, Sacramento, Las Vegas, etc.

It can't be cost...those cities can support the cost of large TV news departments. They all have traffic problems that would make traffic reports every ten minutes around the clock attractive. You'd think that someone just getting into his car in San Diego or Dallas would want to instantly tune in to the news station. Get the traffic, find out what's been going on, see if the heat will break.

But that's not the case. They'd rather support 3 county stations, five religion stations, several talk and sports-talk stations...but no all-news.?

In the eight years I lived in San Diego there were two full fledged
attempts at all news. They both failed.

Somehow, a bulletin that the surf's up isn't important after the 300th
use.

Could it be that most southern cities have fewer "type A" people who have to know everything that's going on in the world immediately? People who live life at a slower pace are happy not to be bothered with the tragedies of the world on a minute-by-minute basis, and to catch up instead when they watch the evening news or read the newspaper the next day.

The thread began with a substantial misconception. Phoenix is the sixth largest city in the U.S., but the 16th largest metro area/radio market. By way of illustration, Phoenix has a population of about 1.6 million. Surrounding suburbs bring the total metro to about 3 million. San Francisco has fewer than 800,000 residents...but the Bay Area metro is close to 6 million. Thus, San Francisco is metro market number 5. When using metro markets as a measurement, Phoenix is comparable to Denver, Sacramento, San Diego....cities that, to my knowledge, do not have 24/7 all-news operations.

Enter to win an evening with WBBM-AM news anchor Sherman Kaplan at the Hollywood Casino in Aurora, Wednesday, February 23, 2000 at 6:00p.m.

One-hundred fifty winners, chosen in a random drawing, will receive valet parking, enjoy a scrumptious Italian Buffet Dinner for two, talk about the Hollywood Stars and the Academy Award's nominees with Sherman Kaplan and see if you can pick this year's winners. Plus, that evening, one person attending the dinner will win a four-day, three-night trip from Chicago's Midway Airport to sunny Orlando Florida and stay at the West Gate Lakes Resort.

Entries must be received by February 11, 2000. One hundred fifty winners will be notified by mail on February 16, 2000. No purchase is necessary. Must be 21 years of age or older to enter and to win. There can be no substitution to this prize as presented, decision of the judges is final. One Grand Prize winner will to selected in a random drawing and win on February 23, 2000 a four-day, three-night, trip from Chicago's Midway Airport via ATA Airlines to Orlando Florida and stay at the West Gate Lakes Resort. Grand Prize valued at $2200. Employees and their families of Hollywood Casino-Aurora, Infinity Broadcasting, CBS Corporation and affiliated companies are not eligible.

Since it's practically a law in radio never to pay for anything promotional, how do radio stations pay for their websites? I've seen a few created by, say, Voicenet, so I can presume those are straight airtime-for-services trade. But what about the sites that look really good, have constant updates and audio stuff above and beyond streaming media?

Like Steve, I'm mystefied as to why Brian doesn't comment at all. Brian infers that he doesn't approve for reasons of credibility, and I agree with him wholeheartedly.

Personally, I really think the promotion is a bad idea. Most stations I have worked for have prohibited news personnel from being involved in this kind of publicity, and at one station (see below), the news folks weren't allowed to do live spots.

Actually, I find it rather interesting that this can happen at a station like WBBM, when at music-intensive WINC (Winchester, VA) where I used to work, news was separated from the music programming pretty completely, even when it was read live in the same studio. As a live, local station they were *very* concerned with maintaining the credibility of the news department.

I'm interested in what other people think of the incorporating of news folks into station promotion, or for that matter, what they think of news anchors doing spots.

Cheers,
Alan in Boston

Many don't remember that he was the color man on many Celtics' broadcasts with Johnny Most in the 1960s at WHDH. In fact, his melodious voice is heard trying to give Johnny a calm down-breather on the famous "Havlicek Stole the Ball" record.

I'm glad to see that Jack Cullen is back on radio after being laid off last year. He's been broadcasting from CKNW 980 (Vancouver Canada) for more than 50 years. During that time he played music from the 20s, 30, 40, 50s ect, and many old time radio shows.

I started listening to him back when I was in high school. Those radio programs from the past were quite entertaining.

Now he's back on CKST AM 1040 (Vancouver). I'd like to thank this radio station for helping him get back on the air where he belongs!

550. DAB in the UK - too expensive and no future ?

Newsgroup: rec.radio.broadcasting
Date: 2000-02-04 00:00:00 UTC
From: Geoff <geoff@gold.ac.uk>
Message-ID: <389AA8C8.EA22D35A@gold.ac.uk>
Source record: 21099

We seem to be in the same position this year as 12 months ago regarding the availability of cheaper DAB receiving equipment. What's the use of MPXs like Digital 1 going on air, when they effectively have no listeners ? I can't believe that in the >5 years since the Beeb started

DAB broadcasts, the cheapest home tuner you can get is =A3599 and the cheapest mobile model =A3100 less than that (happy to be proved wrong on

figures). I also find it hard to believe that the new commercial digital multilplex operators have been able to justify to their shareholders and potential advertisers the wisdom of investing millions in a technology that isn't yet even close to being accessible to any but

'the rich'.

With digital TV, massive publicity and subsidy of equipment was used to allow anyone who wanted to the opportunity of 'going digital'. With radio, this probably won't happen because it isn't seen as relevant or profitable. There's nothing new or exciting on DAB (apart from arguably

better quality!) - just more of the same GWR, EMAP, Capital Group etc.. Most people listen to either a car, portable or walkman, and neither of the latter two have shown any sign of appearing on the market. So begs the question, what is the future for DAB ?? I'm beginning to think that it's just going to be an expensive white elephant, which will be overtaken by new technologies, or developments of the technology making much of today's kit outdated. It could also cause massive losses to the

huge commercial radio congolomerates such as GWR, EMAP and Capital (so maybe not so bad !). Even one of the most enthusiastic of supporters of

DAB (and the only person I have known personally to have a car DAB unit), Steve Conway, has stopped maintaining his www.dabdirectory.co.uk site !

So, I wonder where we'll be in 2001 ? I predict not far different from what we are now.

Anyone care to discuss ?

Geoff

Paul Van House <pvhbinx@aol.com> wrote:

"Anyway, it's easy to monday-morning quarterback, but it's hard to imagine why expanding an oldies playlist would hurt ratings. I understand the need for a "hot list" of a couple hundred songs that "test" well, but don't understand the complete absence of countless songs that were major to at least "minor" hits during the target time period."

My hunch is that the PDs are afraid that, if an oldies fan tunes in and happens to hear a song they'd never heard before, they'd automatically assume that the station is playing second-rate junk and won't give that station a chance to prove itself. This is the same problem that keeps stations in other formats from playing new songs that are not a *perfect* fit in their chosen format.

Frankly, if I tuned across an oldies station and heard a song (in the genres I like) that I'd never heard before, I'd start listening to that station heavily to hear the songs that the other guys are too chicken to play!

Personally, I think terrestrial DAB is a solution in search of a
problem. I can't figure out what the purpose is other than selling
equipment.

Satellite radio is another subject.

Of course there is a problem, a killer one: sound quality.

What I am not aware of is any proposed DSB system that actually
has the ability to reliably deliver quality better than FM
radio at its best.

The problem is that FM is generally not at its best. By that I mean,
bad signal to noise and multipath distortion.

I consider acceptable performance to be quality equivalent
to the current CD with no digital dropouts. This means that if
lossy compression is used, at the current state of the art
assuming that no "accumulation of bits" lasting longer than say
1/10 second, more than 300 kilo bits per second is needed.

FM radio is acceptable certainly for talk and for pop music.
It is barely acceptable for classical music IF you have a good
antenna and if the station does not compress. DAB offers
the possibility of essentially perfect reception all the time,
and NO VOLUME COMPRESSION AT THE SOURCE. It can off the
possibility of compression at the receiver IF the LISTENER
so desires (with, of course, compression OFF as the default.)

(Also, I recognize that this will not suit the purveyors
of pop music. They don't have to use it.)

Not anymore. WISW-1320 AM went to 'adult standards' (or whatever the
1940's/50's/Sinatra/Streisand
variety of music is called) several months ago. It wasn't much of an
all-news operation anyway; highly automated
carrying AP radio news with taped local inserts that were so badly done you
could tell that the weather forcast
you might be listening to on Sunday was recorded on Friday afternoon.

How long has Columbia, S.C. had a full-time "news" station?

I am ready to "opine" in this thread.

If you notice, L.A. IS in the "sunbelt" so there is an exception to the observation here.

L.A. also happens to have a market that supports the kinds of salaries needed for a full-time "news" operation.

I'll use my favorite "pick-on" station - WIOD.
"Newsradio" 610, as it's called, has some of the worst reporting I've ever heard by so-called professionals. I've mentioned before, it is laughable. Since I lashed out on them last September, they have stopped all news in favor of Dr. Laura from 9-11:30., They have moved Rush from sister "SuperTalk" 940, and they moved traffic from "on the threes" to "on the ones" but most of the time, traffic is over by the "ones." They have stopped using the slogans, "the newswatch never stops" and "the news starts now." They now use "Your 24 hour source for news and information. Ok, I'll buy that - except when Hurricane Irene is coming through Ft. Lauderdale at the same time the Miami Heat pregame coverage starts.
(FYI, the Heat coverage won out)

But here is an example of what they considered a "news" story not too long ago:

Teaser reads,"Seat belt saved life."
The body of the story was: One Hialeah policeman investigating the accident said. The driver lost control of his car and jumped the median. Slammed head first into an oncoming car killing all 4 persons (teens) in

the car, none of whom were wearing seat belts. The driver is alive but passenger(s?) in his vehicle is (are) dead. The driver had been drinking and was charged with DUI.

The reality of the story was the accident was the result of the man drinking. The report had its own "agenda" built in of blaming the ones who weren't wearing seat belts for dying.

This was pure incompetence and listeners AND sponsors know that because MOST ARE LISTENERS.
duh.

In a market such as New York or Los Angles or Chicago, you can ill afford the mistakes made in the smaller markets. The real professionals are there, not in the smaller markets.

As there are exceptions to every rule, such is the case here. WFLA has changed to sound more along the lines of WIOD (as predicted by moi). But in the news portion, it does appear they (WFLA) will stick with what works.

Here is the answer to your thread/subject/question:

The "news" people in smaller markets, for the most part, are honing their craft with the hopes of moving up to a bigger market and, in turn, the financial ladder. And making plenty of mistakes along the way. The market won't "buy" all that incompetence because there isn't the population to financially support it nor the advertising dollar to justify it.

(anyone have change for a nickle?)

WINGFM is the old Champion City Broadcasting WAZU (worked there back in the late 70's with Smilin' Bob & Duane Dodds) free-form AOR (NewBlimp etc.) Now a non-focused AOR with syndicated Morning show (Bob & Tom) getting ALOT of backlash from conservatibe Dayton adults. Never will be a force to challenge WTUE until programming direction occurs. WHKO (K99) Oldies95 & WHIO all Cox. Along with TV and Dayton Daily News. WTUE sliding abit with personnel changes (AOR). WGTZ (Z93) starting to tighten up (CHR) but the sad state of CHR/Pop limits them. WONE still MOR (on the bird) WING all sports (CNN/ESPN) and dry as dust. WMMX (Mix107) eclectic AC (old WDAO signal).

Dayton used to be a vibrant market. *sigh* De-regulation strikes again! Still alot of great people in the market but rather "reigned in" by corporate suits who "live & breathe" research.

btw....was there an old WONE aircheck posted somewhere???? LOVE to hear it,,,,and any other airchecks/jingles!!!

At the risk of getting off-topic:

WIOD and WINZ swapped formats a couple of years ago. Pre-swapped 940 was "940-Wins", a news station, and 610 was "talk radio for the 90's." After the swap 940 became "SuperTalk 940" and 610 became a "news" station. Almost right away (within two or three weeks), following the swap, they came on with liners complaining of how they were being "threatened" by a builder wanting to erect a high rise condo on the property adjoining the TL. Inside the liners, was the boasting of how "newsradio" 610 had been a long time "news leader" and how the signal would be severely degraded by the condo and the citizens of South Florida would be threatened as well. I don't know how this has been resolved yet or if it has been, but I have a signal problem with them around the Turnpike and 595 interchange (not coincidentally where the 50kw 940 towers are). Whether that has anything to do with the condo or not, this was clearly a matter of complaining to listeners. For years this was a no-no in radio. I guess in the "Clinton America," it is OK to complain and be a victim, even if you are a radio station owned by Clear Channel.
I personally don't feel a bit sorry for them and will treat them accordingly.

Does the requirement to detune man-made conductive objects in the
vicinity of a DA apply to unlicensed entities (like a condo) as well as
to licensed ones? (like cellular-phone companies)

I suspect the real concern might have been over the cost of answering
hundreds of RFI complaints from the residents of the new building. And
being regularly hassled in the local town council over the "ugly towers"
they have to look at. (never mind the towers were there for decades
before the condo ever went up)

Ideally, WIOD should have no right to complain about construction on
adjacent properties. (as long as the builders pay for any
retuning/reproofing of the antenna required by their buildings)
Ideally, the residents of the condo should have no right to complain
about RFI resulting from their choice to live next door to a 10,000 watt
radio station whose presence was obvious and cheap telephones lacking
basic filters.

Unfortunately, the condo residents *will* complain. Really, WIOD
doesn't have much choice but to do likewise. (I won't pass judgement on
the appropriateness of doing so on the air)

There is none. Hence my opinion, quoted above, that there is no
purpose to it other than selling equipment. In fact, the compression
algorithms being proposed in the U.S. are all worse than analog FM.
They remind me of the widespread claims that MP3 and mini-disc are "CD
quality" media. These things have their uses (I personally use
mini-disc for news interviewing), but they are NOT high-fidelity
media.

>FM radio is acceptable certainly for talk and for pop music.

FM radio is more than acceptable on the quality of equipment used by
the vast majority of listeners. Much of the problem with FM
broadcasting as practised today lies with signal processing, and is
not an inherent fault of the medium. The same will apply to digital
broadcasting.

We'll probably get DAB because the manufacturers need it, not because
it represents any discernible improvement in quality for the average
listener.

It was more than complaining to their listeners. They used their other advertisers as locations to gather signature on petetions to the city council, and urged people once an hour to go and sign it. They pitched this in the newscast with the newsperson reading the piece as live copy so it was indistinguishable from a story.

They dispatched newsmen to cover the city council election more completely than they covered the Dade county elections, and in their coverage, the defining issue for the candidates was how they felt on the tower question.

But there was a little catch 22. When WIOD moved their studios away from their transmitter site, they let their business license lapse, the village's zoning ordinance only allows antennae in commercial buildings on the premises of licensed business, so the village has now demanded that the station remove its tower.

Of course, they're all in court, at least the last time I heard.

Clear Channel's actions in this matter have been supremely unprofessional; using a news department and its news anchors as a battering ram to further the business operations of the station.

It is the kind of thing that defines the difference between a professional journalism operation from a bunch of hacks.

I don't think NPR stations ever show up in the actual ratings when
they are released mostly because these stations do not have to rely on
ratings since they receive their money from donors. There are
probably a lot of people listening to WBUR just like KOPB in Portland,
OR freqently ranks in the top 10 according to a recent newspaper
article. Since many of these stations are on FM, it has contributed
to the rise of FM news/talk stations.

Yes, KXL, Portland and KGO San Francisco are two more that come to
mind that are like KIRO. In Portland, we had an all news station in
the 70s and early 80s, KYXI. They started out under the old NBC "News
and information service". After that, they became a CBS affiliate
with the focus on local news. They would run a midday
talk/information program and go back into news for the day at 3PM. On
weekends, they would run primarily local news with programming from
CBS. They eventually ran CNN news in the off hours and on weekends.
In 1981, they changed formats citing high costs and low ratings. I
often wonder if all-news would work in Portland today or if anyone
would even try it.

Neither, by the way, is CD. Philips, CD's inventor, states in the
architects specifications that CD is to be a convenient, MID-FI
format.

>

This is one of the most sensible discussions on this topic I've seen
in some time. Of course I don't get out much, but that's not what's

important here. The idea that DAB is going to be a great boon to FM broadcasting, or AM for that matter, because of a quantum increase in audio performance is almost laughable in today's economy.

And here's why: The same companies that will preside over the operating DAB transmitters already own digital cable franchises. With its enhanced picture potential, digital cable has been sold to the public as THE ultimate in high quality media delivery. Which, to date, may very nearly be true. At least in the demonstration phase.

But before the first house was wired, more than one digital cable company came forward declaring an intent not to deliver enhanced definition pictures, but to multiplex additional profit generating services on the signal, while retaining the existing level of quality.

Where profit motive exists, and don't get me wrong, I"m a good capitalist just like the rest of us here, but where the profit motive exists, there will always be a decision to compromise quality to the point of toleration, in the name of profit.

A great example is MP3. MP3 is a great system for saving bandwidth. But quality has suffered. Fidelity is NOT Cd quality or anywhere near it. What has been enhanced is the ability to store more, and make more profitable, what would otherwise be huge files in small digital spaces. Marketing departments have convinced an uninformed public that this is a good thing, and the ultimate in portable fidelity.

Nonsense. But slap the word Digital on a box, and what's inside has to be an improvement, yes?

DAB is not going to be so much an improvement for FM audio performance as much as a platform to permit broadcasters to sell the same air time twice.
Great for stock prices, but not so hot for, as your example, classical music lovers.

And they'll do it by selling an uninformed public on "digital" and "cd quality."

I've heard some of the demonstrations of DAB. Breathtaking. And a dramatic improvement over most current FM. But demonstration, and delivery are two different things. Like Digital Cable. One is a sales tool, the other is a profit generating tool. And where profit is an issue, not availing one's self of the potential revenue stream of mulitiplexing becomes a very expensive operation indeed.

DAB...Great for Karmazin, not so hot for his customers.

One other point and then I'll go back into my hole with my wire recorders and my 78's,...The author is correct here that the bulk of analog FM quality issues are a direct result of the sometimes

tortuous lengths we have gone to process FM audio. (Anyone remember CRL's square wave clipping?) However, in the era of consolidation, (can you say "RollerBall?") the breathtaking loudness wars are coming to an end. Engineers and Program Directors are beginning to realize that firepower in the processing chain isn't always a good thing, nor is it really necessary anymore. And with one or two engineers tailoring the 'sound' of a group's stations, processing is becoming more reasonable. And more listenable. This movement is slow, but it's happening.

The real limit to quality in analogue FM then, becomes the tuner. And there are a bunch of genuinely crappy tuners out there. Only a handful pay serious attention to linearity, noise, distortion, separation, again, based on profitability, and the compromises made are well within what are decided, (decided by those who will never have to actually use the product,) to be 'acceptable limits,' while our friends in marketing go out and convince a susceptible public "that shit IS shinola and you must have a bad cold."

With a finely tuned and quality obsessed FM station like WFMT, Chicago, which btw, has also made some quality compromises in recent years, and a tuner made by a quality obsessive company, Fanfare FM comes to mind, analog FM can sound very fine indeed.

Digital's real advantage, for the consumer, like CD's real advantage over vinyl, is the ease of producing perceptually equivalent sound at a future modest cost. Note the distinction: It's NOT in producing the ultimate in audio quality. It never was. Ask Philips.
Given the nature of FM reception troubles and Digital signal path's inherent fragility, DAB, really begins to look like, as the author said, a solution in search of a problem.

Doesn't WSMN 1590 (5 kW DA-1) have an all-business-talk format? WSMN is licensed to Nashua. If you can't get stock quotations on WSMN, try WBZ 1030 in Boston. WBZ airs stock quotations once or twice an hour during the trading day. If that's not enough for you, try the RealAudio feed at www.1120wbnw.com. WBNW (Concord MA) calls itself Boston's business station, although about the only way you can hear it in Boston is via the Web. You have no chance of picking up WBNW over the air in Nashua; WBNW is on 1120 and there's a station in Salem NH on 1110 that WBNW protects. WBNW carries the Bloomberg morning show from 5:00 AM to 8:30 AM and carries the twice-hourly market reports from the Business Talk Network (formerly the Business News Network) during the rest of the day.

Subject: Radio station for stock market news that can be received in Nashua, NH
From: Howard Kaikow (kaikow@standards.com)

What radio station can be received in Nashua, NH that has good stock market coverage during the day?

Is there a "business news" station in this area?

I would guess that some such station exists in the Boston, MA area.
Perhaps I can receive those in Nashua?

PHILIPS's original CD **WAS** a mid-fi device. However,
thankfully this is not what we got.

What we got was fixed by Sony before it got to market to be
a true hi-fi device. Philips was going to use 14 bits, not 16.

I disagree. Those a re a big problem sometimes. But FM simply
suffers too much from multipath. Portable or mobile reception
is a big problem (for classical music.)

>

I find that for portable units, such as Walkman types, those are not
the problem .. the problem is simply said, RF overload. They
suffer horribly when anywhere near a big station.

You bring up an interesting point. WQYK and WRBQ in Tampa are on top of a building in downtown Tampa. After a taller building was built on the next block south, the southern coverage deteriorated. They are both FM's. Neither seems to care, either. But, what happens in the event of such challenges? Does band (am/fm/tv) make a difference? There must be a precedent. These couldn't be isolated incidents.

Cellular is a completely reverse technology, though. While we, in Radio and TV, care that bigger is better, Cell relies on reuse and therefore doesn't care if there is something in the way or how high.

In this case, as so many times, money will talk.

> Unfortunately, the condo residents *will* complain. Really, WIOD
> doesn't have much choice but to do likewise. (I won't pass judgement on
> the appropriateness of doing so on the air)

That is, of course, your choice. I will pass judgment and will do so anytime I see a blatant lack of the professionalism. But as for this occurring within the Clear Channel hierarchy, I'm not sure they were aware of this originally. They were too busy buying radio stations and billboards throughout the world from the comfortable confines of the San Antonio heffers. They may have passed it off as more cuban interference problems. So, until I see definitive proof, I'll hold off on that part. My complaint is the lack of intelligence that the local WIOD newsroom seems to think we have.

The answer is clear, but costly, move WIOD transmitter to WINZ's property and jam that signal down Fidel's throat - and clear up the signal problems at the Turnpike and I-595 interchange in the same process.

The band makes a big difference.

At AM, the entire tower is the radiator. Additional conductive objects located near the tower(s) affect the directional pattern of the system. Sometimes, they're put there on purpose - for example, WIOD uses a second tower during the day to avoid throwing too much power in the direction of 620 in St. Petersburg. But erecting a third conductive object (like a steel-framed condo!) near the existing WIOD towers would cause unpredictable changes to the directional pattern. Interference to St. Petersburg and other stations - and/or an unacceptably weak signal over Miami - would be likely consequences. Such an object can be "detuned" by attaching a (relatively simple and inexpensive) coil-capacitor network to cause it to cease to affect the AM system.

At FM and TV, the tower serves only to lift the transmitting antenna off the ground. Having a building in the way isn't likely to generate interference to other stations, though it might form a shield that makes it difficult for desired listeners to get the station. But because of the nature of the effect, "detuning" isn't an option at these frequencies. I do note that WQYK-FM and WRBQ-FM are on awfully short towers for 100,000-watt stations. Seems to me both stations would do well to find a way to get on one of the TV towers & get a little more elevation - certainly Clear Channel and Infinity can afford it?!

> Cellular is a completely reverse technology, though. While we, in Radio

My point is that cellular towers can affect the directivity of an AM system. The AM system won't mess up the cellular coverage, but the cellular tower can screw up the AM. The FCC *requires* detuning of the cellular tower in this case. But a cellular base station, being a radio station, requires a FCC license. A condo doesn't require a FCC license. So what I'm unclear on is whether the FCC can require a condo near an AM array to detune itself.

> The answer is clear, but costly, move WIOD transmitter to WINZ's

Yes, it wouldn't be cheap! - especially with WINZ's 6-tower array. I suppose they could let out the null to the southeast - otherwise, it'd be pretty weak in the North Miami area.

Whoops. What are the _actual_ ratings compared to what? --non-actual
ratings? Huh? The numbers for public radio stations do not show up in the
Arbitron _book_ for any given market. Nonetheless, the listenership for the
public stations (or NPR stations in the usual lexicon) is measured in each
survey and the resulting numbers are in the Arbitron database. They are
made available to the public stations that subscribe to get them. They are
several conditions and restrictions involving how the public stations can
use the numbers.

But it is entirely possible for a station like WBUR or WAMU to be second
or third in their markets in a given daypart in a given demographic yet not
be listed as such in the regular ratings book. It has happened.

Thanx.

I didn't try 1590 because, as I recall it is all talk, and I don't think
much of some of the talk I heard.

1030 and 1110 seem the best bets.

1120 sounds like what I want, but cannot receive it in Nashua.

I was looking for something that I could listen too during a power outage
using a battery operated radio.

When no power outage, I just check any one of a number of www sites to get
updates.

They had oldies programs back in 1971 when I started listening to radio
at the age of 11. I found it a nice change from what seemed to be
repetitive airplay, and in a lot of ways it defined the music I like
to listen to.

But while songs have been added as they've gotten old enough to become
oldies, it does seem like very little has changed in thirty years.
Whatever the vintage, the song had to be popular in the first place in
order to
get airplay nowadays. So not only do songs have to have been popular
years ago, I'd say they pretty much had to be top-forty popular.

How often does Jefferson Airplane get played other than "White Rabbit"
or Somebody to Love"? And forget about hearing those songs done by
The Great Society, where they originated, or hearing any Quicksilver
Messenger Service.

So you get songs that are terribly overplayed, to this day I have no
Beatles albums because I can't get over the bad taste from their
over exposure on the radio, even if I know they had a lot of songs that
never made it to radio that should be worth hearing, and yet miss
plenty of neat songs because they don't fit the still-strigent playlist.

There are changes, but they seem glacial. I swear I'd never heard Dion's "Abraham Martin and John" until about fifteen years ago, when part of it was played on an oldies show as part of a quiz, yet it sure gets reasonably frequent airplay on the local oldies station nowadays. And Louis Armstrong's "What a Wonderful World" seemed to work it's way into the playlist after "Good Morning Vietnam" which seemed to be the first time I heard it along with a lot of other people.

I'd love to hear a lot wider range of material. Though I'd known about Nina Simone for twenty years, and had planned to get one of her albums, I'd never knowingly heard her until I got a CD of hers out of the library a year ago. How could I have missed hearing her all these years? And surely there is a lot more like that which I've yet to hear.

We got an all-news station, actually two, here in Montreal back in December,
so I've certainly been thinking about the concept.

There are two comments about an all-news station. One side says, "it
repeats too much" and the other says "it's great, I can get the news whenever
I want it". The whole idea of an all-news station is to have an audience
constantly tuning in for a short period of time. But in order to
pay for it, you have to have enough people tuning in for any given time.

In a population center like New York City, it's a given that the population
is large enough so that even a small percentage tuning in at any
given time will still be a large enough audience for the advertisers.

But once you drop down a few notches in population, the concept becomes
more questionable. Montreal's a fair size city, but people who's first
language is English are a minority. (Which is why we have two all-news
stations, one English speaking, the other French speaking.). If you
start with that already small population, then will there be enough
people tuning in at any given time to provide sufficient audience for
the advertisers? Especially if you consider that there's already
a station that's mainly talk, but has a good news department and which
has newscasts every half hour and drive shows where the news is fairly
continuous?

As it is, the station is apparently relying quite a bit on newsfeeds
from CNN and Bloomberg.

The need for an all-news station goes down depending on how good
the news coverage on the other stations are. And the smaller the
population, the less feasible the concept, since there's a smaller
pool of potential listeners in the first place.

Too late. Because of their short-sightedness (excuse the pun) and failure to upgrade to full Class C status, both of these stations have had to accept new co-channel drop-ins in recent years which would have not been allowed if they had upgraded their facilities. There's now a Class A on 99.5 in LaCrosse (Gainesville) and a 104.7 in Naples. Plus, both a 99.5 and a 104.7 on the east coast of Florida (one is in Jupiter, FL, and I forget the COL of the other.) It's my understanding that neither WQYK nor WRBQ can upgrade now...because to do so would infringe on the contours of these new co-channel stations. "Use it or lose it", and they lost it. Kudos to (then) Jacor for having the foresight to put 93.3, 100.7, and 101.5 on the big Riverview stick. All three of these stations are easilly receivable at my location in east Orlando.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

Is it a spacing problem? (would they be short-spaced at any useful
tower site?)

They're both about 550' HAAT (in Florida, I guess that's the same as
550' AMSL<g>), and can go up another 450' without reducing power, while
remaining class C1. They can go even higher if they reduce power.
(probably not necessary in that terrain) But if short-spacing is a
problem, I suppose that wouldn't help. Maybe they just need to wait for
someone to build a 100-story building in downtown Tampa<g>.

Mr. Hobbs is correct. Since Summer 1998, Santa Barbara has been an example of a smaller Sun Belt market with an all news station.

Smith Broadcasting's 1250 KEYT-AM operates primarily as an extension of KEY-3 Television, simulcasting all locally originated live TV news brodcasts. And while weekday mornings feature a 2 hour live & local radio only newsblock, and 2 more hours of local issue oriented talk, the largest program element is AP's "All News Radio" satellite service.

See KEYT's program schedule at --
http://asp.broadcast.com/radio/schedule/schedule.asp?station_id=476

From: Steve Walker <steve@undergroundshopper.com>
Message-ID: <JcFn4.1405$vi4.38715@dfw-read.news.verio.net>
Source record: 21046

Hi.

We're having problems with our WaveCart software and wondered if anyone could help or suggest another product.

We use WaveCart 3.0.5 with two Antex soundcards.

The SoundHound has problems seeing our files on a regular basis, and I can't seem to get WaveCart to run reliably on both channels. Can't ever seem to duplicate these problems, they just seem to have lives of their own. One minute everything works fine, then (as soon as we go on the air) it craps out.

Any suggestions would be appreciated.

Thanks,

Steve Walker

Hi Skeeter, I posted the WONE air check (early 1967 - Tom Campbell) at
http://www.ashfordumc.org/audio/WONE1967.ram
It'll only be there for another couple of weeks. I borrowed the space
from a web site I maintain.

WMAQ AM: Weekend and Fill-In Anchors and Reporters

If you have a background in news, a clear, personable delivery and are available for weekends, overnights, vacation relief and on-call work, these jobs can let you break into two of the nation's top radio news organizations. These jobs include the preparation of scripts and anchoring news segments, street reporting or both. Must demonstrate ability to interview newsmakers effectively, respond to breaking news situations calmly and skillfully, while exhibiting strong technical skills and the ability to tell stories well. 3 years of successful medium-market broadcast news experience and/or a degree in journalism preferred. These are part-time positions and will require flexibility in scheduling.EOE.M/F. Contact: Georgeann Herbert, 455 N. Cityfront Plaza, 6th Floor, Chicago, IL 60611.

Number one for the past 53 consecutive ratings periods on Chicago's 720 WGN-AM, the thoughtful Mr. Collins offered the following lessons in life on what proved to be the day of his demise:

Things I've Learned

I've learned that I like my teacher because she cries when we sing "Silent Night"..... Age 6

I've learned that you can't hide a piece of broccoli in a glass of milk ....Age 7

I've learned that when I wave to people in the country, they stop what they are doing and wave back ....Age 9

I've learned that just when I get my room the way I like it, Mom makes me clean it up ......Age 13

I've learned that if you want to cheer yourself up, you should try cheering someone else up ......Age 14

I've learned that although it's hard to admit it, I'm secretly glad my parents are strict with me ....Age 15

I've learned that silent company is often more healing than words of advice ....Age 24

I've learned that brushing my child's hair is one of life's great pleasures ......Age 26

I've learned that wherever I go, the world's worst drivers have followed me there....... Age 29

I've learned that if someone says something unkind about me, I must live so that no one will believe it ....Age 39

I've learned that there are people who love you dearly but just don't know how to show it ..... Age 41

I've learned that you can make some one's day by simply sending them a little card ....Age 44

I've learned that the greater a person's sense of guilt, the greater his need to cast blame on others .....Age 46

I've learned that children and grandparents are natural allies ..... Age 47

I've learned that singing "Amazing Grace" can lift my spirits for hours .....Age 49

I've learned that motel mattresses are better on the side away from the phone .....Age 50

I've learned that you can tell a lot about a man by the way he handles these three things: a rainy day, lost luggage, and tangled Christmas tree lights .....Age 51

I've learned that keeping a vegetable garden is worth a medicine cabinet full of pills .....Age 52

I've learned that regardless of your relationship with your parents, you miss them terribly after they die .....Age 53

I've learned that making a living is not the same thing as making a life .....Age 58

I've learned that if you want to do something positive for your children, try to improve your marriage .....Age 61

I've learned that life sometimes gives you a second chance ...Age 62

I've learned that you shouldn't go through life with a catchers mitt on both hands. You need to be able to throw something back....Age 64

I've learned that if you pursue happiness, it will elude you. But if you focus on your family, the needs of others, your work, meeting new people, and doing the very best you can, happiness will find you.....Age 65

I've learned that whenever I decide something with kindness, I usually make the right decision.....Age 66

I've learned that everyone can use a prayer .....Age 72

I've learned that it pays to believe in miracles. And to tell the truth, I've seen several .....Age 73

I've learned that even when I have pains, I don't have to be one .....Age 82

I've learned that every day you should reach out and touch someone. People love that human touch -- holding hands, a warm hug, or just a friendly pat on the back .....Age 85

I've learned that I still have a lot to learn .....Age 92

I haven't heard Bob since he did afternoon drive on WGN in the 70s, but
he was always extremely popular, and will be missed by many.

(this could have been a lot worse, with the plane landing on top of a
hospital... thankfully, it wasn't.)

Message-ID: <14429-38A105C0-84@storefull-144.iap.bryant.webtv.net>
Source record: 20953

The most popular air personality in Chicago radio for many years, Bob Collins of WGN, has been killed in the crash of his private airplane in Zion, Illinois. He was just a couple of weeks shy of his 58th birthday.

There are several people who've made me want to be in radio because I've enjoyed their work so much. Wolfman Jack, Larry Lujack (WCFL and WLS Chicago) and Connie Szerszen (WIND Chicago) kept me interested in radio when I was just a teenager doing voices for commercials. More recently, Danny Bonaduce, Jay Marvin <http://www.jaymarvin.org> and Nick Abbot <http://www.nickabbot.com> have given me hope that radio was still worth listening to and working in as a performing art instead of just a time killer. Collins, at different times, served as an inspiration to me on both ends of the issue.

Tomorrow is my 39th birthday. But it will be an oddly hollow one, I know, because Collins' voice won't be coming out of the radio as I awaken. His death has made me realise once again why I love and care for this medium. May God rest his soul.

Source record: 20954

My two cents worth:

Though I don't believe that a large percentage of WGN's older listeners would have been able to appreciate it as much as I did, they missed out hearing another side of "Robert L. Collins:" racy, funny, sometimes teetering-on-the-edge Top 40 jock at WRIT, Milwaukee, during the early 1970s. He was one of my daily pleasures back then.

As his "act" was so totally different from what anyone might expect to hear down the road at the station of Franklyn McCormack and Wally Phillips, there was some degree of wonderment (among some) when he was picked to fill a plum full-time opening at that rather staid Chicago giant.

Obviously, in looking for someone to bring a more youthful feel to the increasingly endangered species of the old-line MOR AM station, they recognized the talent and the smarts that many others were not yet aware of. Very bright move.

Bob Moke

CONTRACT COUNTDOWN FOR NEWS ANCHOR
Robert Feder
Chicago Sun-Times

Could WBBM-AM (780) be on the verge of losing its No. 1 star? That's the fear around the CBS/Infinity Broadcasting station where morning news anchor Felicia Middlebrooks is counting down the days to Feb. 29 when her contract expires. Her bosses say they hope to keep her, but no progress has been reported on a renewal.

Middlebrooks has been the morning-drive franchise of "Newsradio 780" since 1984. As the reigning queen of Chicago radio, she undoubtedly would find her services in great demand at any number of other broadcast outlets.

I think what I would do is find an area with a bunch of apartment complexes and do apartment newsletter stuff and 24 hours of some sort of regular programming like music, sports, or news.

Then I would direct mail everyone in my listening area about the station.

Sumner Redstone, the Head Big Monkey at Viacom, said this recently: "What will propel the Internet ultimately is content, not technology."

Good grief, was he ever right! If you ever needed affirmation of the need for the basics on your website (or for having a website at all), please read this. And remember we really mean The Basics, the content of the website, not Flash and Shockwave and Java.

In radio, the basics are time and temp, the call letters, a positioning statement or two. Online, the basics are...well, you'll see.

In the middle of January 2000, it appeared that the NFL Rams would wind up playing in The Super Bowl.

This meant that, for the first time in years, the focus of national media would be our little community of a couple million along the Mississippi River.

Just before Super Bowl Weekend, KTRS, a news/talk station in St. Louis, was approached by CNN and asked if it would be okay if CNN's worldwide coverage could center on this radio station for a few hours on the Friday morning preceding Game Day.

The station agreed quickly and CNN did their bit, with cameras and crew and an anchorman and miles of cable, putting the radio station on the air for two hours, cutting back and forth between Atlanta and the KTRS studios in St. Louis, and then running clips from the segments for the rest of the morning. For reasons unknown, the station scheduled to be spotlighted in Nashville never showed up on the air, replaced by a restaurant.

You can see still photos from the event here:

http://www.ktrs.com/pages/cnnwashere.htm

The only better publicity KTRS could have achieved would have been to buy "roadblock" ads on all five local TV stations Super Bowl Evening. But that would have cost serious dollars. This exposure cost absolutely nothing.

Okay, it was on CNN, and not a local station. How many listeners does KTRS have worldwide? Well, the station does stream their audio in Real and WMP formats online... But the bottom line is this: how cool is it that KTRS was on CNN?

But why did CNN choose a locally owned "mom and pop" startup with no sports presence to speak of to use as the anchor for their coverage of local reaction to the good fortune of the NFC Champion Rams?

Why not use the established 50KW "Sports Voice of St. Louis" KMOX-AM?

Why not use the newly-established local sports station KFNS-AM?

Why not use the station that airs the Rams' games, KSD-FM?

I've managed the website for KTRS for the past three years and I was there that Friday morning taking pictures. I asked the CNN segment producer why they chose KTRS.

His answer? The station's website. He did a search for stations in St. Louis and wound up with a number of choices.

The KTRS website was the ONLY one that provided ALL the answers they needed: who were the personalities on the station's morning show, where the station was located geographically, and how to contact the appropriate station personnel.

Bingo. KTRS on CNN. Think, as a site manager/developer, I was a happy camper? Think the station was able to get some promotional mileage out of the experience?

The basics count, on the air and online.

Sumner Redstone, the Head Big Monkey at Viacom, said this recently: "What will propel the Internet ultimately is content, not technology."

Good grief, was he ever right! If you ever needed affirmation of the need for the basics on your website (or for having a website at all), please read this. And remember we really mean The Basics, the content of the website, not Flash and Shockwave and Java.

In radio, the basics are time and temp, the call letters, a positioning statement or two. Online, the basics are...well, you'll see.

In the middle of January 2000, it appeared that the NFL Rams would wind up playing in The Super Bowl.

This meant that, for the first time in years, the focus of national media would be our little community of a couple million along the Mississippi River.

Just before Super Bowl Weekend, KTRS, a news/talk station in St. Louis, was approached by CNN and asked if it would be okay if CNN's worldwide coverage could center on this radio station for a few hours on the Friday morning preceding Game Day.

The station agreed quickly and CNN did their bit, with cameras and crew and an anchorman and miles of cable, putting the radio station on the air for two hours, cutting back and forth between Atlanta and the KTRS studios in St. Louis, and then running clips from the segments for the rest of the morning. For reasons unknown, the station scheduled to be spotlighted in Nashville never showed up on the air, replaced by a restaurant.

You can see still photos from the event here:

http://www.ktrs.com/pages/cnnwashere.htm

The only better publicity KTRS could have achieved would have been to buy "roadblock" ads on all five local TV stations Super Bowl Evening. But that would have cost serious dollars. This exposure cost absolutely nothing.

Okay, it was on CNN, and not a local station. How many listeners does KTRS have worldwide? Well, the station does

stream their audio in Real and WMP formats online... But the bottom line is this: how cool is it that KTRS was on CNN?

But why did CNN choose a locally owned "mom and pop" startup with no sports presence to speak of to use as the anchor for their coverage of local reaction to the good fortune of the NFC Champion Rams?

Why not use the established 50KW "Sports Voice of St. Louis" KMOX-AM?

Why not use the newly-established local sports station KFNS-AM?

Why not use the station that airs the Rams' games, KSD-FM?

I've managed the website for KTRS for the past three years and I was there that Friday morning taking pictures. I asked the CNN segment producer why they chose KTRS.

His answer? The station's website. He did a search for stations in St. Louis and wound up with a number of choices.

The KTRS website was the ONLY one that provided ALL the answers they needed: who were the personalities on the station's morning show, where the station was located geographically, and how to contact the appropriate station personnel.

Bingo. KTRS on CNN. Think, as a site manager/developer, I was a happy camper? Think the station was able to get some promotional mileage out of the experience?

The basics count, on the air and online.

Has anyone demonstrating IBOC DAB actually been able to show that
DAB will be able to overcome multipath problems? I keep hearing these
stories about wonderful sounding demos of DAB at trade shows, but has
anyone shown how DAB will perform under real-world conditions? If DAB
ends up performing worse than conventional FM in a moving vehicle, then
these guys deserve to go "back to the drawing board."

CONTRACT COUNTDOWN FOR NEWS ANCHOR
Robert Feder
Chicago Sun-Times

Could WBBM-AM (780) be on the verge of losing its No. 1 star? That's the fear around the CBS/Infinity Broadcasting station where morning news anchor Felicia Middlebrooks is counting down the days to Feb. 29 when her contract expires. Her bosses say they hope to keep her, but no progress has been reported on a renewal.

Middlebrooks has been the morning-drive franchise of "Newsradio 780" since 1984. As the reigning queen of Chicago radio, she undoubtedly would find her services in great demand at any number of other broadcast outlets.

Hello everybody
I'm new in this group, my name is Gus and writing from Argentina.
I'm requesting information about FM radio stations that transmit
all along a road. I mean: the coverage area is few meters wide
and handred miles long.
How these stations work?
Can follow winding roads?

Thank you in advance and excuse me for my english

> Can follow winding roads?

These stations use "leaky" coaxial cable such as manufactured by Andrew.
This is cable with a solid copper (or other metal) outer conductor, but
slits are cut in the outer conductor to allow controlled leakage of the
signal. The cable follows the entire length of the road where coverage
is required.

This technique is widely used in tunnels as well as along roads. It's
also used in the two-way radio business for both transmitting and
receiving in underground railways, or subways such as in New York.

Newsgroup: rec.radio.broadcasting
Date: 2000-02-11 00:00:00 UTC
From: steve1reg@aol.com
Message-ID: <20000211035918.25788.00002879@ng-fn1.aol.com>
Source record: 20975

Actually, Columbia had TWO all-news statons in late 98 and early 99. WIS-TV, the market's only VHF station and biggest by far news operation got an LMA to run an AM station at 1320, which they renamed WISW.. So they simulcast their noon, 5 and 11pm news on the AM station. And they ran CNN Headline News (audio only) all other times...except in AM Drive where they ran Imus In The Morning via Westwood One syndication.

(Yes, all-news fans. That makes NO sense. All-news stations LIVE for morning drive. Perhaps WIS didn't want an all-news radio station competing with its own news-intensive mornings on TV.)

Almost at the same time the market's big FM country station flipped AM 1400 to all-news as well, this time using the audio of CNN Headline News.

Needless to say, this was all short-lived. Now the first station runs talk programs as well as simulcasting the TV newscasts. And the second all-news station switched to adult standards when an FM station gave up that format. Its popular morning show hosts were also hired.

Thus ends the saga of two all-news stations in Columbia, SC. NYC & LA will have to carry that tradition on themselves.

Charlie is working out the rest of his contract, which is up, IIRC,
this summer. The station demanded he stop doing his show from Phoenix
and move to L.A. full-time. He apparently could not find a suitable
home in L.A., and his wife practices medicine in Phoenix. So Charlie
and KRTH agreed to a parting of the ways.

Just a note to let you know that I've got a brand new web site dedicated to helping me find a radio job! Here's the address: http://neil.home.dhs.org/job/

If you checked out the old one (and hopefully bookmarked it!) you'll find that it still has the same address. Take another look and see what's new.

If, on the other hand, you didn't visit the old site, check out the new one and see what I'm all about! Here's that address once again: http://neil.home.dhs.org/job/

As always, I invite your comments, suggestions, questions, complaints...or anything else you want to write me about! Check out the site and let me know what you think.

And by the way, you might want to make a special trip to the site just to hear the KISS 92 FM On-air Package. It's brand new and totally awesome stuff! Check it out on the Samples page.

Thanks!

Don,
The Times Union reported that Leykis was no. 4 in the ratings for that time period. The reason management gave was that Leykis was a one topic show---sex and more sex talk and that rankled quite of few people. It seemed to me that Leykis was trying to compete in luidness with Howard Stern. I remember Leykis when he was on WQBK early in his career and he was great with debating politics and issues of the day. It's a shame that he thinks he needs to get into the gutter to get ratings--he is a very bright guy and his radio patter of today doesn't do him justice.

I was the chief engineer at WAUK in Waukesha when Bob was doing his interesting night talk show on the rocker WOKY in 1967. He was really pissed off when that station refused his request for a pay raise. I was camping out that night, listening to his dissing the station on-the-air about how cheap the station was later that night. He was history after that broadcast...

I liked him and would often tune in when I lived in Madison, WI and now in Detroit.

629. Re: Charlie Van Dyke out at KRTH? Wha' Happenned?

Newsgroup: rec.radio.broadcasting
Date: 2000-02-12 00:00:00 UTC
From: Michael Hagerty <mhagerty@ktvk.com>
Message-ID: <38A5F641.E43F2CF0@ktvk.com>
Source record: 20985

Mark:
Charlie and KRTH agreed to an early out on Thursday(2/10). That turned out to be his last show. Jim Carson & Joni Caryl now do mornings. Charlie was, contrary to early reports(including mine), not working out the remainder of his contract, but activating a clause in his contract which allowed him to leave his 3-year deal at any time after year number one on six months notice. KRTH did not insist that Charlie move to Los Angeles full time, only that he do every show from Los Angeles. If Charlie wanted to fly to Phoenix every Friday after work and back to L.A. every Sunday, that would have been fine with KRTH. It would not have been fine with Charlie and his family, who lived like that for six months before KRTH built Charlie a studio in his Arizona home. Had they not worked out an early exit, Charlie would have had to do that for his final six months at KRTH, as well. Interestingly enough, KRTH is letting him keep the studio....as Charlie will continue doing voice work for the station(and dozens of others).

630. Speculation on Replacing Felicia

Newsgroup: rec.radio.broadcasting
Date: 2000-02-12 00:00:00 UTC
From: brian connolly <clast@interaccess.com>
Message-ID: <sac7lgqdivs161@corp.supernews.com>
Source record: 20986

First, let me say that speculating on replacing Felicia makes some at BBM very very nervous. She is their No.1 Star and the reigning Queen of Chicago radio. She's the franchise. If you figure morning drive represents more than 65 percent of revenue there and Felicia personally accounting for more than 1.5 points... well, do the numbers. Her loss would be devastating. Regaining that position is uncertain and a long-term process. Rod is looking down the barrel of major downside cost and a lot of risk.

As to Chuck saying that "if she were to depart, I would bet my last cent that she would be replaced by another "AFRICAN-AMERICAN." Complete nonsense. If they had to replace her they'd have to find a Celebrity with the same pull. Period. Politics may influence business; but at the end of the day the cash register has the last word.

With regard to Kridel being the logical replacement... As Ron said, "Kridel seems to be the usual fill-in for Milddlebrooks so it's hard to image that they would pass her over if the position became open." The operative word is "fill-in". Again it's a business. Look at the numbers. It will never happen.

Clear Channel and Infinity can afford it?!"

Ah, but with all the DTV construction activity, seems to me a lot of TV
stations would be reluctant to lease any more tower space for FMs until
they're sure of what they'll need to put up for their own operations.

Today I got surplus a few what appear to be cheapie EBS radio receivers.
They are fixed tuned to one radio station frequency, and have reeds tuned
to 960 and 853 Hz. Were these the frequencies of that beeeeeeeeeeeep
tone used in the old EBS system?

The radios are "TFT model 8010" solid state. See a picture of it

633. A Different KLid (?) Of Oldies Show Update - 2/13/00

Newsgroup: rec.radio.broadcasting
Date: 2000-02-13 00:00:00 UTC
From: Steve Coletti <bigsteve@dorsai.org>
Message-ID: <001601bf75f9$582e5080$722d7fce@compaq>
Source record: 20989

KLid? Well that's what happens at 2:30 AM when you wake up to find that the posting of Show #62 died and you have to restart it. Funny it looked fine when I was groggy. I also posted it only to a.b.s.mp3.1960's, again I was too sleepy to do it right.

It's now 2:40AM, but the next morning and I'm still up and awake so let's give an update.

It was announced today that Screamin' Jay Hawkins passed away from complications after surgery during the week. Since we've taped our shows in advance because of my own upcoming surgery, we're not going to be able to do a tribute until March 18. Most of the material we've already aired, we're going to try to find an interview we did with him about 20 years ago and add it to the show.

Meanwhile here is the schedule of our next programs.

62 currently streaming on Live365.com, Valentine's Day songs. Mostly doo-wop, but we open with mushy pop stuff you're gonna like.

63 airing 2/19/00 on WBCQ, Going To The Chapel. Mostly doo-wop February continues with most of the songs by Sonny Til & The Orioles and The Ravens on this show.

64 airing 2/26/00 on WBCQ, Roots Groups, Roots Songs. Early sounds from pioneering R&B groups.

65 airing 3/4/00 on WBCQ, Ok doo-wop month is over, it's time for "Forgotten Females". Mostly from the 1962 -1965 period.

B-5 airing 3/11/00 on WBCQ. Coverage of the Winter Short Wave Listeners Festival in Kulpsville, PA.

66 scheduled for 3/18/00, The aforementioned tribute to Screamin' Jay.

634. oldies radio vs. popular movies

Newsgroup: rec.radio.broadcasting
Date: 2000-02-13 00:00:00 UTC
From: "Stephen C. Propes" <spropes@loop.com>
Message-ID: <38A6F465.3347@loop.com>
Source record: 20990

Saturday's L.A. Times had a fascinating article about songs used in movies...ala "Unchained Melody" in Ghost - which gave the record a big push on many radio formats...including Spanish.

My question is - since I don't try hard to keep up with the current crop of flicks - what songs have gotten an extra push on oldies radio because of their use in popular movies.

Yep. EBS was replaced by EAS. The 2-tone system is no longer used.

Unfortunately, it's what seems to work, he is quite hot in several markets. He is about the only thing that keeps the FM talk station in Seattle going. The station has been trying to build on his popularity.

A number of years ago-early 1980's, the city fathers in LaPorte, Indiana, (60 miles SE of Chicago) asked Larry Lujack to be the marshal of the largest 4th of July Parade in Indiana-60-75,000 people in attendance. "Uncle Lar" was fading a bit at that point, but was still drawing pretty good numbers at WLS. He showed up late, used the 'one finger' wave througout the 90 minute
parade, and kept telling the driver to "hurry up-this is taking too f**king long"-loud enogh for everyone withing 100 feet to hear him. He would not pose for pictures, would not sign any autographs, was on his way back to Chicago (with a very aggresive cadre of body guards) before the back end of the parade had finished, He complained about his car, the weather, the driver, the lack of free food, and how cheap his people had sold him for, and he spent days afterwards complaining, on the air, about how lousy his treatment had been. .

Fast forward perhaps three years---the request goes out to Bob Collins. He had just
moved to mornings on 'GN. He called my talk show to promo the parade--did 20 minutes four times in the two weeks leading up to the parade-all ad lib, all hysterical, and almost all G rated (well, he did say, when I asked him about his social life as a dominant radio personality, that "the sheep will never tell."). He spoke about the parade beforehand, and said he was looking forward to it. He showed up on time, did all the promotional apprearances the parade people wanted him to do, signed every autograph, posed for everyone's pictures, got out of the car and walked quite a bit of the route, shaking hands with folks. He told the parade folks he would be delighted to come back anytime, and coudn't have been more professional, or nicer. The only thing he asked for was a "Big Orange" on a 90 degree day. It was a complete turn-around.

I remember Uncle Bobby talking about "class, culture, and sophistication." He had all three, but never rubbed any of it in your face.

I moved out of WGN range, to California, in 1989. I didn't miss much about Chicago radio, but I did miss "Uncle Bobby.". A few years after I had moved, a transplanted Chicagoian said I reminded him of Bob Collins. I knew then I must be doing something right.

I would hope some posters would feel like sharing their favorite Bob Collins stories, or bits. He was one of a kind, and I am fortunate to have seen that in personl.

```
**********************************************
Antenna Modeling Software and Book

* NEC-Win Plus+

* Basic Antenna Modeling: A Hands on Tutorial

www.nittany-scientific.com
**********************************************************
NEC-Win Plus

An antenna computer-modeling program that is designed for a wide
range of users. With a few simple point and clicks, users will
immediately create complex structures for analysis.

The program includes the following features:

* Full 32 bit program
* Windows version of NEC2 - enhanced to handle 9,999 segments
* Easy Geometry entry (spreadsheet like interface)
* Full support of Variables and Equations
* Transmission Lines/ Networks
* Geometry checking
- junctions
- segments intersect at midpoint
- segments cross at midpoint
- segment within volume of another segment
- segments parallel and overlapping
- segments parallel and separated by less than sum of their radii
* Necvu v4.0 Antenna viewer
* View currents on wire (magnitude, phase, real and imaginary parts)
* VRML export (in Necvu) to view the antenna in full 3D as tubes
* 3D surface plot of total gain
* Theta/Phi or Elevation/Azimuth coordinate system
* Built in presets for Wire Diameter and Conductivity
* Choice of None, Real, Perfect, or Sommerfeld ground planes w/presets
* Translate, Rotate, or Scale each wire
* Rectangular plots for VSWR and Input Impedance
* Polar plots - total, horizonatal, and vertical gain
* Tabular Data (including full NEC2 output data)
* Auto-segment feature (straight line approximation)
* Stepped diameter correction
* Import Autocad (dxf) files
* Export VOACAP Type 14 Antenna Coverage files
* NEC2 core spools status information to the window
* Necvu 3D - view antenna as 3D tubes with backgrounds - export Povray
```

files
* NEC-Win Synth Light (easily build radials, ground planes, monpoles, dipoles, and dipole arrays)
* Average gain test to help determine model validity
* Ability to enter wire diameter in AWG values

****
Basic Antenna Modeling: A Hands on Tutorial

Basic Antenna Modeling introduces the reader to the art and craft of good antenna modeling using NEC-2. The text is designed for use with NECWin Plus, a user-friendly Windows 95 implementation of NEC-2. However, the principles of antenna modeling are perfectly general and apply to all versions of NEC-2. The tutorial contains 21 chapters, an appendix containing extensive information that is useful to modelers, and an index. The text is designed for both individual self-study or for classroom use.

Table of Contents
Introduction

Part A - Basic Modeling and Model Testing
NEC-2 and NECWin Plus
Modeling Preparations
Basic Antenna Models
NEC Output Data
Careful Model Construction
Convergence Testing
Frequency Specification

Part B - Common Modeling Techniques, Limitations, and Work-Arounds
Source Types and Placement
Tapered-Diameter Elements
Geometry Limitations
Grounds and Applications
Resistive Loads
Reactive Loads
Transmission Lines

Part C - Practical Antenna Modeling
Monopoles and Ground Planes
Vertically Polarized Antennas and Arrays
Bi-directional Wire Arrays
Yagis
Horizontal Parasitic and Phased Arrays
VHF/UHF Antennas
Special Structures

Appendix
Some Useful Data for Antenna Modelers

641. ROBA CALLS FOR CENSORSHIP: WORDS BANNED

Newsgroup: rec.radio.broadcasting
Date: 2000-02-14 00:00:00 UTC
From: brian connolly <clast@interaccess.com>
Message-ID: <sagi74k2ivs165@corp.supernews.com>
Source record: 20903

CHICAGO, February 14, 2000 - A new media organization here calling itself the Reporters for Banal Adjectives (ROBA), today announced an initiative to "clean up" Internet Newsgroups of any and all language that they suspect to be inflammatory.

Wishing to remain anonymous, a spokesperson for the group, a.k.a. "Bob" said, "A 'Big Caboose' just isn't reasonable no matter how you look at it. 'Last car' conveys the same message and isn't likely to hurt our feelings."

"Bob" went on to describe that the membership of ROBA has experienced a lot of "anguish". He also reports that a lot of sleep is lost over words like "dumpster". He characterized this word in particular as downright "sinister".

Experts see this push for censorship on the Internet as a growing trend. Last month all references to anything anal were quickly removed from Zecom, Chicago prestigious media discussion group. Then "Fudge packin' stoolpusherz" appearing in the thread titled "sausage snortin '92.7" apparently pushed the limits of that message board and were expunged directly.

However, many view the ROBA standards as much more subjective and strict. Where the topics "banging and b.j.'s" are still well within bounds at Zecom, ROBA is not comfortable with such words. "Slave wages" is also currently being denounced on chi.media. Other words presently being reviewed by ROBA and considered potentially inflammatory include: shingles, winnebagos, moose flaps and Virginia.

Well David and All, you weren't the only ones last evening. Mostly English and some Spanish fm's up to at least 104.9---and speaking of that 104.9 country station had a weather forecast for Winter Garden. The weather peson was on a dialup phone line among this recorded or Satelite country format. Most of the FM was from around 515-557PM PST, but action under TV Channels 2-3-4 lasted til maybe 8PM. I have been DXing FM and some TV since 1969---and while this isn't the first February action, this was the best.

That was a connection I didn't think to make. But I will have to discount that as a reason because lately high towers are going up rather quickly in Riverview (Fl). Whether those are in addition to, or instead of, somebody else could be more specific for now. Probably both. The tower leasing would not be as much of an issue as being degraded for failing to do so during the "window of opportunity" which 'QYK didn't care to do at the time. They were number #1 overall. In this case, being number #1 was a bad thing. Penny pinchers wouldn't understand the justification and might not get another chance.

646. oldies radio

Newsgroup: rec.radio.broadcasting
Date: 2000-02-14 00:00:00 UTC
From: "Stephen C. Propes" <spropes@loop.com>
Message-ID: <38A8D0A1.33C0@loop.com>
Source record: 20908

Just posted on my website, a baffling challenge on the trivia page (baffling because who would wish to know) and the top 40 songs played on oldies radio in 1999 along with some very lightweight analysis. No commercial content.

Um, not quite. Actual emergency messages (and required monthly tests) still use the two-tone signal strictly as an attention getter; the signal is optional in required weekly tests.

649. Weird FM Signal Skip Last Night

Newsgroup: rec.radio.broadcasting
Date: 2000-02-14 00:00:00 UTC
From: davidtan@cts.com
Message-ID: <38a7cb9b.3029167@nntp.cts.com>
Source record: 20997

I was listening to K-BIG 104 out of Los Angeles while driving in San Diego, when for some weird reason, the station changed into an R&B hip hop station.

Scanning up and down the FM dial, I picked up a dozen country and pop stations in spaces where no station exists locally, as well as in spots where I would normally hear an L.A. station.

The weird skip produced about 20-30 stations originating out of Southern Texas or the Mexican state just south of Texas.

KLOS was supplanted by a hip hop station

Sets 102 was nearly drowned out by country music

103.3 was disco

100.3 was another black oldies station, but it wasn't Mega 100

104.1 was playing top 40 and country alternating between two stations

97.5 was country

98.5 was spanish

96.9 was religious

the list goes on and on. very weird night in FM radio listening tonight

Re: the following message...

Radio amateurs communicated as high as 222 MHz between Texas and
Southern California. Es that high is nearly unprecedented. There were
many contacts on the 144 MHz ham band over that general path. If you
look at
http://raven.cybercomm.net/~slapshot/dxing/144prop.html
RIGHT AWAY, some of the blow-by-blow comments may remain.

I have heard that there is a Real Audio file somewhere with Bob L Collins at WRIT. When I find it I will post the address.

Kent, K9EZ
Wisconsin Radio Page http://members.xoom.com/WisRadio

"Bob Moke" <musicprof@mindspring.com> wrote in message
news:ywuhOOTYi2jts4efXXKBV4sLSJua@4ax.com...
My two cents worth:

Though I don't believe that a large percentage of WGN's older listeners would have been able to appreciate it as much as I did, they missed out hearing another side of "Robert L. Collins:" racy, funny, sometimes teetering-on-the-edge Top 40 jock at WRIT, Milwaukee, during the early 1970s. He was one of my daily pleasures back then.

As his "act" was so totally different from what anyone might expect to hear down the road at the station of Franklyn McCormack and Wally Phillips, there was some degree of wonderment (among some) when he was picked to fill a plum full-time opening at that rather staid Chicago giant.

Obviously, in looking for someone to bring a more youthful feel to the increasingly endangered species of the old-line MOR AM station, they recognized the talent and the smarts that many others were not yet aware of. Very bright move.

654. Re: Oldies Programming question

Newsgroup: rec.radio.broadcasting
Date: 2000-02-15 00:00:00 UTC
From: robbass2@aol.com
Message-ID: <20000215042212.03423.00000536@ng-fb1.aol.com>
Source record: 20910

"Ed Ellers" ed_ellers@msn.com writes:

>it's hard to imagine
>why expanding an oldies playlist would hurt ratings.

This is probably one of the most debated issues in Oldies radio programming today. Unfortunately it has been shown that oldies stations literally invite (if not encourage) listener tuneout, when they start expanding their playlist.

My theory for this is that Music Directors think it's perfectly acceptable to add any oldie which charted well when it was new. The problem with this practice is that too often the MD adds songs which are untimely as they become oldies.

For example, I don't think too many stations would dare play "You Light Up My Life" from Debby Boone. While it was a #1 song, most people today find that song to be "wimpy". No one wants to tune into a station that plays oldies that are of this nature.

Although this is only one example, there are too many other oldies which have the same effect. Sure they were hits when they came out, but sometimes songs are like fads.

So typically, Oldies stations try to stay with the best-of-the-best, even if it means smaller active libraries. Remember, Oldies radio is programmed for the "masses", not for the small handful of people who want to hear every single Hot 100 hit...

>My hunch is that the PDs are afraid that, if an oldies fan tunes in and
>happens to hear a song they'd never heard before, they'd automatically
>assume that the station is playing second-rate junk and won't give that
>station a chance to prove itself.

I disagree with this assumptuon and here's why. I suspect that at most stations, the PD/MD carefully researches songs before even considering testing them, which should help eliminate the so-called "second rate junk". More importantly, I believe most listeners of Oldies radio already understand that the station is playing music that they may not have heard before.

> This is the same problem that keeps
>stations in other formats from playing new songs that are not a *perfect*
>fit in their chosen format.
>

I don't believe there's any connection to Oldies vs. Currents in terms of choosing songs for rotation. The problem with today's music is that a lot of artists/groups can't write!

I think the major problem with new music today is that the music business (like everything else) has fallen into the "greed" trap. I think Artists/Bands/Groups/ etc are so interested in fattening their wallets, that they'll do rush jobs on new material and put out anything, regardless of how good or bad it might be.

Even though I was born in 1970 (now you people know how old I am!) I have had a lot of exposure to music from as far back as the 1950's. Even though I can hear the obvious differences in musical styles from every decade, there are numerous songs from each that I thourghly enjoy.

But today I have a lot of trouble grasping any interest in new music, because all I hear are songs about gangs, devil worshiping or songs loaded with filthy language. I'm not suggesting that oldies music didn't have such material, but back then it wasn't as common as it is today.

looking for possibly a photocopy of a manual for a Audicord E-26
stereo record/play unit......just bought one without a manual (REAL
cheap...so i'm not gonna complain too much!!) ..some info included on
lid of unit...trimmer locations, etc....but would like the whole thing
if possible...especially as it seems this machine doesn't detect sec
and ter tones....generator card is there though....weird. otherwise
the machine is in great shape. any idea how old it is??? i'm guessing
1970's.

any help would be appreciated.

e-mail if you can assist at:

I think there's plenty of that to go around. .. musicians, recording companies,
the radio, MTV, entertainment critics that boost this stuff. . .and of course,
the listeners who keep buying it!

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through
Friday. This is because Pacifica will not allow us to broadcast the
Pacifica Network News over Realaudio.

660. Radio World article

Newsgroup: rec.radio.broadcasting
Date: 2000-02-17 00:00:00 UTC
From: bobrusk@webtv.net
Message-ID: <20077-38AC5EA4-38@storefull-158.iap.bryant.webtv.net>
Source record: 20916

I write for the trade paper Radio World and am doing an article on the late actress Hedy Lamarr. She was involved in creating the spread spectrum radio technology. Is anyone aware of her contribution? If so, I'm looking for quotes to use in my story (quotes that have not previously been published). If you reply, please give your full name with correct spelling and title (if you're with a company).

Thanks,

Bob Rusk

664. Prophet Omega

Newsgroup: rec.radio.broadcasting
Date: 2000-02-18 00:00:00 UTC
From: Demetria Kalodimos <earthmom@home.com>
Message-ID: <38ACD991.4F0E8FDD@home.com>
Source record: 20920

I am researching for a video documentary on the true story of the Prophet Omega. The prophet was a local Nashville radio evangelist who broadcast out of his apartment via the signal of WNAH. I believe he enjoyed his heydey in the early to mid 1970's. Tapes of the broadcast have had a long life and afterlife in the Nashville music underground.

I am trying to discover his true identity. If you can be of assistance, please e-mail to:

Source record: 20924

I didn't look, but their both C-1's and I'll bet it would be quite difficult to reach more audience given the tight geographical station squeeze here in Florida. - Presuming that going to a taller tower were an option, the necessary change in coordinates would probably involve problems with 2nd and 3rd adjacents...?

I don't know what this thread was about anyway. I all know, is that taller is not always possible, even if desirable... and that's a whole other discussion.

Last I heard, the FCC was going to do some research (inquiry) into the posibility of establishing a new Class C-Zero status for over-protected Class-C's. But I haven't heard much about it recently. To my knowledge, there are no over-protected Class-C's in Florida, but there's a lot of Class C-1's from 80-90.

>>I presume that the system works like this...

In fact, FM synchrone is working with an adjustement of a digital
delay applyed to the modulation. Techniciens who install a FM
synchrone network make an adjustement to the delay of the transmitters
put their car which is located at the point where the signals of 2
transmitters are superimposed.

They have the possibility to adjust the delay of the audio sound from
the transmitter since their car to have the same delay of the signal
at this point. This is the secret of this system.

Also the transmitters aerials are directive (generally vertical
polarisation) and always beamed in the same direction. The result is
to use the same frequency with many transmitters. In France on the
motorways only 107.7 MHz is used, the power of the transmitters is
around 200 Watts and they are located approximatively every 5 km (3,1
miles).

The result, when you are in car, is only a very small jamming during
less than 1 second when your receiver change of transmitter.

Best regards.

672. Fine to me, but too low to a listener...

Newsgroup: rec.radio.broadcasting
Date: 2000-02-19 00:00:00 UTC
From: RobBass2@aol.com
Message-ID: <bf.112c449.25df95a3@aol.com>
Source record: 20928

OK so I could have used a better title for this...

I was studio directing a sports remote the other day. The feed was on a POTS with a Comrex Hybrid. The mix between the remote and the recorded spots played in between all looked fine on the board's VU meters (usually at 0 dB with +/- 2 to 3 dB) and the FM modulator. We're using an Optimod 8200. The mix also sounded fine to me...

Anyway, I came to work the next day and was told that a listener said the sports remote sounded much lower in volume than the spots did. I was asked things like did I have enough volume from the sports feed, and also asked if I could explain the reported difference in volume.

So I went back and listened to the tape of the on-air signal of the remote, just to double check. I also matched that tape against another POTS sports remote we had done the week before. Both tapes sounded good, and there was no noticeable change in volume beween the remotes and the spots

Honestly I have no clue what this listener heard. I've done many sports remotes before both on POTS and direct cable feeds, since about 1993, and this is the first time I've ever heard anyone report such a problem. The best I can do is say that it must have something to do with the poor frequency response of the POTS vs. recorded spots.

Can anyone else offer any insight?

Hi! I know everyone will say it's a necessary evil but I wish more than anyone could comprehend that they would do away with the EAS/EBS tests forever! For years, they have been a torment to me. I fear them, I have for years and don't know why. Is there not an easier way to warn people of emergency situations? I do understand their use on radio more than I understand it being televised so often. Most people seem to ignore it, so why isn't a different one used to "test" it and another for actual emergencies? Also, what is it used for nowadays anyway? I don't think it's weather related because they use words across the bottom of the screen on TV to warn of weather watches and warnings. If anyone has the answers to any of my questions, please let me know. I would appreciate it so much!!!

674. Re: Fine to me, but too low to a listener...

Newsgroup: rec.radio.broadcasting
Date: 2000-02-19 00:00:00 UTC
From: Peter Maus <PeterMaus@worldnet.att.net>
Message-ID: <38AE48B5.10D6EE49@worldnet.att.net>
Source record: 20930

Depending on what you were listening to the tapes on, there would be large perceptual differences between a Comrex feed, and the usual array of spots, music, and other assorted broadcast audio. Full bandwidth audio, when processed, sounds dense and very loud. Comrex audio is bandwidth limited, and the perceptual cues the ear/brain uses to interpret loudness/fidelity, are missing from Comrex audio, most specifically, the top end and upper midrange harmonics. (Even an FM Optimod cannot enhance frequencies which are not there.) So the audio sounds less dense, and less intense. You as a broadcaster take this as second nature. A listener, in many cases being acoustically uninformed, would perceive this as less loud. It would also be less bright, and as such percieved as muddy.

And it cannot be overstated that the language used to describe audio by even those in the business is very badly butchered. By the listener with poor audio education, this trait is tenfold worse. So what you were told, may not, in fact, be what the listener was saying. But there would be no way, short of a brain probe, to really know what it was you were being told.

Here in Wisconsin EBS is used in weather situations where people can get hurt. Flash flooding and funnel clouds come to mind. Programming is interrupted and the computer sounding noise is broadcasted, following a message of a serious storm in area.

EBS is much better than sirens, because sirens are often blaring and the storm is in the opposite side of town 30-miles away. With EBS everyone is given clear information that something serious is/can/will happen.

> and sports-talk stations...but no all-news.?

All-news is by far the most expensive format to put on the air. Top-flight news anchors can cost the equivalent of a good afternoon drive jock, and the staff of writers, producers and reporters is an expense you don't typically have in a music format. The cost of doing talk is similar to that of a music format -- the talk host takes the salary of a jock, and then you've got a producer/screener. Still, you're way below the cost of all-news.

The fact is, out of 365 days, there might be 15 days a year when breaking news has everyone scurrying to their radios to hear the latest developments. The rest of the time, the news is pretty much the same from morning thru midday, just new angles on the same stories. And whatever new stories develop, unless they're big stories, don't generally tend to attract sufficient audience levels to make the format economically feasible.

The move away from all-news to news in the drive times and talk elsewhere is one I fought in one of the markets you mentioned. But in the end, I could see that they were right. There's just not sufficient demand for it.

677. Re: Surveys--How did local stations get those chart positions?

Newsgroup: rec.radio.broadcasting
Date: 2000-02-19 00:00:00 UTC
From: "\"R&B\"" <RandB@mindspring.com>
Message-ID: <88mhq2$e3l$1@nntp6.atl.mindspring.net>
Source record: 20933

We used to call around to the larger record stores in the area and get a report from each of them. Depending on the station, this might have been done in any number of ways. Some stations got the stores to report their top ten or twenty selling singles and albums. Other stations I worked for would read a list of titles to the person at the store and get them to give a 1 to 5 ranking on how briskly the title was selling.

Record company reps eventually got hip to this, and began paying off the record store people (not necessarily cash, but maybe concert tickets, tour jackets, free product, etc.) to do them the "favor" of giving a favorable report to their records.

Record guys pulling tricks like that? Noohhhhhhh!!!!!! Say it ain't so!!! hehehehe

Eventually, we all moved toward call-out research. Radio people finally figured out that people don't necessarily like hearing on the radio the same songs they bought a week ago. And there's no way the record guys to pay off the whole listening public!!

678. NYC/Philly Radio News 2/20

Newsgroup: rec.radio.broadcasting
Date: 2000-02-20 00:00:00 UTC
From: Dave Hughes <fuzface@ix.netcom.com>
Message-ID: <dVRr4.14534$_p1.1265935@news1.rdc1.md.home.com>
Source record: 20934

NYC/Philly Radio News at http://go.to/nyrtv

Feb 20....

NYRTV News.....

The 2/16 edition of Glenn Hauser's World Of Radio program reports that the Federal Communications Commission (FCC) is not cracking down on NYC area pirate radio operations. He says that well established Spanish language FM pirate broadcasters operate on 87.7, 87.9 and 95.1 in the Manhattan area. All are "24-7" and in stereo, he adds.....

Jersey Shore update: 99.3 FM, WSAX in Atlantic City/Pleasantville, has dropped its smooth jazz format for a simulcast of dance/contemporary hit WZBZ, 105.5 FM in Cape May Courthouse. Smooth jazz continues for now at Cape May's 102.3 FM, WJSX, which had simulcasted 99.3's signal.....

Yet more changes at hot talker WNEW (102.7 FM). The morning "Anti-Show" with Steve Mason and Sue Kolimnsky has been canned. Meanwhile, NYRTV first reported that the DC-based PM drive talk/zoo team of Don & Mike is coming to Infinity/CBS's WNEW. Their arrival seems likely since the management team (including General Manager Ken Stevens) from Don & Mike's DC station, Infinity/CBS's WJFK, is now in place at ratings starved WNEW, which flipped from rock to talk last fall. Also look for a new overnight team at NEW - Ron & Fez from Florida, with an internet-based talk show.....

The NY Post reports 2/16 that Boston DJ Ralphie Marino, who left urban WJMN, could wind up on NYC's WKTU (103.5 FM).....

WEFX (95.9 FM) in Norwalk CT flips, well kind of, from rock to classic rock on 2/14.....

Remember Philadelphia classical radio station WFLN at 95.7 FM (now urban oldies WEJM)? Plans are afoot this spring to resurrect WFLN as a web-only operation at www.wfln.com.....

RCN (Starpower) and AMFM, which owns a batch of Philadelphia area radio stations, join forces to offer co-branded internet services to the Delaware Valley.....

More news, plus complete NYC/Philly radio listings at NYRTV, http://go.to/nyrtv

Has Clear Channel threatened to paint their own walls?Or their own
billboards? Are you running the same campaign against General Motors,
Exxon, Daimler-Benz and other companies that are bigger than the
entire broadcasting industry?

I didn't think so.

For those who are interested, there is a very complete history of KSTT,
with pictures that was recently written by Dave Coopman and published by
the Rock Island Historical Society. It is entitled "Someplace
Special..KSTT..A History of the Station and it's people."

This cross-post hasn't generated any response on the other news groups I've seen it on, and rightfully so. For almost 20 years I have been watching broadcast-serving unions gradually losing ground. This is translated, of course, in the loss of jobs by the union membership. I didn't see "Painters and Allied Trades District Council 6", or any other union showing support as numerous friends in the broadcast industry have lost security, benefits, and jobs. I never had much use for unions, even when I was a member, and this pathetic plea for help stinks with irony. Nothing personal Mr. Hensal, but your union and other unions are welcome to sleep in the bed of their own making. Coming to broadcasters for help and sympathy, when most of them are hanging on for dear life, is pathetic.

A few stations around the country are trying this segment of the Classic Rock format. I know in Nashville, the CRTRR station shot up to number two in a recent book. (However, it was probably helped by the Classic Hits station switching for a while to "Jammin' Oldies." It has switched back to 70's hits this month.)

I've heard WHCN Hartford and WBLM Portland Maine, two CRTRR stations. I think that as classic rock fans get older, they probably want LESS hard rock in their music mix, not more. Both stations are trying to grow older with their audience. Each was a Progressive Rock station in the 70s and more mainstream rock in the 80s and 90s playing a wide range of rock...from Zeppelin to Fleetwood Mac, the Who to Billy Joel. Now they are apparently going to just play the Zeppelin and Who material...and add AC/DC and Ozzy and things they almost never played when they were current.

I know no generation entirely gives up its music as it ages but I didn't think we'd actually want to rock harder in our 40s and 50s than we did in our 20s and 30s?

Here in Sa-ra-so-ta, the former .cc station, 102.5 WHPT moved to that
positioning last summer. It is automated as is their (current) (Cox)
sister station, 107-3 "The Bay", with their sleepy elevator rock. (Yes,
a blind man can tell both of them are "Egor"-ized. :-))

> I know no generation entirely gives up its music as it ages but I didn't
> think we'd actually want to rock harder in our 40s and 50s than we did in

It seems to me, they are trying to appeal to my sixteen year old son
with the music I'm tired of. He recently "discovered" B.O.C.'s "Reaper"
and was surprised that I knew the words. (too bad, those brain cells
were still intact)

What is new is the history we never learned before. - or -
History repeating itself in a new generation. - or -
The boomers continue their recycling techniques because:
1.) they have no creative juices left for musical formats, either. - or
-
2.) they have decided "Trees are our Future."

Scary thought... they might be right, listening to 102-FFFIVE, it is
reminiscent of early '80's 'MMR, too bad there is no "personality" to
the station at all. Here's the music, we'll say something, and play the
spots.

I've noticed that KLOS and KGB use the same slogan as well.

Guess they mean that they don't play wimp rock bands like Jefferson Starship
or James Taylor.

Back in the fifties the ham callsign K0TEX was issued and showed in the callbook for a short time.

Could you imagine seeing that on a license plate? We joked about wondering if the guy belonged to the "Rag Chewers Club." For non hams, rag chewing referred to being long winded and the rag referred to a microphone that you were supposedly chewing when you talked.

When I lived in Delaware, there was a nearby station with the call letters of WSUX. Their programming sort of matched their call letters.

Bob,

W5TIT is not really hard to believe actually, since ham operators don't ID themselves by saying their call sign as if reading it as a word :)

Wouldn't KUME be more of a problem than KOME? <g>

Actually KOME would be kind of fun since there's a KEOM and a KMEO. Let's even get a KEMO, KMOE and KOEM while we're at it!

691. A Different Kind Of Oldies Show Update 2/21/00

Newsgroup: rec.radio.broadcasting
Date: 2000-02-20 00:00:00 UTC
From: Steve Coletti <bigsteve@dorsai.org>
Message-ID: <002201bf7c26$84a3ec00$a5ccfea9@compaq>
Source record: 20947

Let me start off by saying that our surgery went fine, the doctor is sure he got it all out. We'll be going for a follow up in about 2 weeks. In the mean time it's no straining, prolonged sitting, no sex and NO BEER. That means no drinking Presedente while at Johnny Lightning's house.

Currently airing on live365.com is program 63, "Going To The Chapel". This is not a "Chapel Of Love" show, this is one of early R&B tunes by groups like the Orioles and Ravens. Open the address found in our signature as a location in Real Player 7, Winamp, or compatible player. Next week we stay with the golden age of R&B with "Roots Groups - Roots Songs".

It's funny how all those girl records started to flood the MP3 newsgroups the second I decided to do a "Forgotten Females" show. I actually got about half the show from stuff that was put up in the beginning before things really started to roll. Since then a few more I already played from vinyl have also made it. That show is scheduled for March 4th.

Speaking of MP3 files, I made up 2 CD-R's last night with all the shows so far for one of my listeners. If anyone is interested in picking up any of my old shows, or all of them, I can make them available in either CD-ROM or audio CD. Please E-Mail me.

I really don't think I'm going to post up our shows to the MP3 newsgroups for a while. We've been having problems with timeouts and now some parts are not getting across from our news server to other news servers. I just can't see wasting my time if they're not getting distributed. If I can try a different mailer, one that saves the individual parts, then I need only repost the missing ones, rather then start over from scratch each time.

The show for Mar. 11, (B5), is another remote from the SW Listeners Winterfest, and will probably be all talk since it will be totally pre-recorded this time. We'll record it on Friday and Saturday morning, do the edit in the afternoon and feed it immediately to the station for the 8PM broadcast. It won't make the net until Monday after I get back. I'll have more on this next week. It will require an elaborate equipment set up and at this time I don't know if I'll be able to take it all with me due to the after surgery restrictions.

The March 18th show, (#66), is a tribute to Screamin' Jay Hawkins that I just finished tonight. We have excerpts from an interview we did with him in 1983 that I mixed in. More details in a future update.

The oldie of the week at our website is "It Ain't The Meat" by the Swallows. It changes Wednesday so be sure to tune in. Until next week, have a great week.

As the classic rock audience ages, changes are afoot. Here's how I look at it:

* Classic rock that really rocks offers more tempo, is not dead sounding like a classic rock station, and is firmly positioned against rock and active rock... whereby a classic rock station that plays Billy Joel and Fleetwood Mac, probably won't share audience with an active rocker.

* Not everyone wants to hear new music, but they do want to hear Van Halen, Led Zeppelin, Black Sabbath. As the audience ages, some classic rock staples will either find their way onto AC (Fleetwood Mac, Billy Joel) or Oldies stations. (The Who) The only place to get these songs if the classic rock station wasn't playing them, was to wade through a lot of new music on your rock or active station.

* Songs by Black Sabbath, Led Zeppelin and Van Halen are not hard. They are the norm. They were hard 20-30 years ago when they first came out. Hard songs are now Korn and Godsmack.

(This next point is debatable, but have at her)

* Consultants and their 300 song classic rock library have caused this. Perhaps there is a classic rock radio programmer who can tell us for sure, but I'll bet that most titles are BURNT! Most avoided playing Paranoid, and heavier AC/DC tracks in favour of the more demographically and sound friendly, Steve Miller and Steely Dan.

That would work for the PD when the height increased for his FM.

"Our KUME is higher than it was before" - works until the next book.

698. Dayton, Ohio TV station history - question

Newsgroup: rec.radio.broadcasting
Date: 2000-02-21 00:00:00 UTC
From: rnewman@thecia.net
Message-ID: <rnewman-2102001323000001@ppp39-99.thecia.net>
Source record: 20857

I have a oddball question about the history of TV broadcasting
in Dayton, Ohio, which I hope isn't off-topic in this
newsgroup:

Do any of you remember a time when all three of the Dayton TV stations
(2, 7, and 22) were affiliated with all three of the major networks
(ABC, CBS, and NBC)?

Each station would pick and choose whatever programs it wanted
from whatever network it wanted. Often the programs aired at
different times of day than in the rest of the U.S. At one point
I think a fourth station, 16, got into the mix as well.

I never experienced this personally, but when I lived in Columbus
from 1968-75, our edition of TV Guide included listings for Dayton,
as well as Columbus and Cincinnati and several nearby small towns.
So I got to see how Dayton TV worked, and boy was it strange.

How did this situation start, and when and how did it end?

Don't know about that. 16, I believe, is WPTD, Dayton's public
TV station.

Is now, but at one point I think it was yet another station
battling for network affiliation in a very chaotic market.
At one point, the FCC got involved.

I hope someone can come forward with the whole history.

I appreciate your response to the post and just want to touch on a few points. If you look at the web site, you can see that the radio industry and the billboard industry are in the same boat because the same companies are buying us both up. They see us together as "out-of-home" advertising. And the consolidation you see in your industry is the same as in mine. And they are anti-worker in both industries.

I cannot answer for any lack of support for your unions issues. I can just speak from my ten years experience which is I have never seen an AFTRA or NABET delegate at any local AFL-CIO meeting here in Cleveland. In Washington, I was on the line with NABET employees when they were locked out at ABC.

As for what I was asking for in my post, it was my hope that we could work together in some manner. I cannot say now how that would work at this moment, but it seems that we have a common cause against Clear Channel.

I can only speak for the here and now. Now is a time that people who care about the quality of life in their industry can come together and fight. We can build a coalition that can hopefully make Clear Channel more accountable for their actions, to treat employees fairly, and respect the public interest. If you are interested in this, I look forward to speaking with you further.

I recall Channel 16 signed on as an INDY but went to PBS (or NET as
it was called back then) pretty quickly. Might have even been a
simulcast with Channel 14(?) (Miami University - Oxford).
Channel 22 was also an independent for quite some time until it got
a network affiliation.
The multi-network per channel was probably only on Channels 2 (which
was primarily NBC) and Channel 7 (Primarily CBS). Once Channel 22
signed up as an affiliate I think all three stuck to one network each.
I think 22 was originally ABC, when it got its affiliation.
These are very foggy memories -- I'm pretty sure the cross-network
programming ended by the early 70's.

I tried several replies. They all degenerated into messages which would embarrass me to send. I hope you, your union, and any other involved unions can sort this out. Not for the sake of the unions, but for the individuals involved and their families. I don't believe that there is enough collective strength to affect Clear Channel, et al. Just bear in mind that juggernauts like CC have learned how to fight "mean and lean", and to employ the latest technology. They will Lead. You can follow, get out of the way, or get run over.

For some reason, the student station at the University of North Texas
is KNTU. Wouldn't you think they'd want to get a broadcast station
with the school's initials?

Still is. Had an interesting bumper sticker...

In mid-January, a callsign spelling a racial slur was assigned to a LPTV
station in Texas. I note that last week, it was changed to KJSR...

It is today. In 1966, the educational reservation was on channel 45.
(there was no station operating on either channel 16 or 45. The closest
educational stations operating were WCET Cincinnati and then-WMUB-TV 14
in Oxford, now WPTD) There was an application for a commercial station
at Kettering on channel 16, I suppose it might have been later granted
and built. I swear I saw something about a "WKTR-TV" on channel 16
somewhere but can't find it now.

Thank you for your reply and your honesty. I hope the work we do is for the individuals, a union is the membership. Jefferson wrote in the Declaration about the Pursuit of Happiness. What those words meant at that time was the right to collectively pursue a better society for all of us. This is what the labor movement is at its heart, although I am not naive to the point that I say everyone practices this belief.

Nor do I think we will find a silver bullet against CC. But we all do not have any chance unless we try to find a strategy against them. It sounds like you have had difficult times in your industry. That experience and those experiences of anyone you know might help put together the puzzle that can help all of us.

The campaign against land mines started with a single person and e-mail. That led to a treaty covering most of the world and the Nobel Prize. We cannot do anything about CC until we all are talking about what they have done to each of us.

Thanks again for your answer.

Eric

On 21 Feb 2000 16:59:25 -0500, ehensal@worldnet.att.net allegedly said

>I cannot answer for any lack of support for your unions issues.

Having been forced to join the Food/Commercial Workers union when
I worked at a Kroger in Dayton, and having seen people leave with one hour
on their last paycheck (Kroger had just survived a hostile takeover attempt
by IGA), I can say I'm not too impressed with UFCW in particular, or unions
in general, and I can sympathize with the previous poster who echoed
that statement.

>I can only speak for the here and now. Now is a time that people who care
>about the quality of life in their industry can come together and fight.

I'll think about that next time I drive past the picketers at my local Super
Kmart, and next time I drive home from downtown and see the UFCW Local 880
billboard on the Shoreway, right by the 152nd Street exit - if it's still
there. (I live in Cleveland too.)

And I also agree with the previous posters that the broadcasters have
other, more pressing issues to worry about. It's a shame that that's true,
but it IS true. I'd go as far as to say that I bet there are a significant
number of people who might be willing to help if they weren't trying to save
their own necks.

[...]

> How did this situation start, and when and how did it end?

I've heard about this, but was pretty young when this sort of thing was going on. My understanding of the situation is as follows...

Ratings were so much lower on the UHF channel that the networks didn't want their programs on it unless they couldn't get in cleared on either of the VHF channels -- even if the VHF station ran the program in an out of the way time slot. Literally, ch 2 & ch 7 could get more viewers at 4 in the afternoon than ch 22 could deliver in the heart of prime time.

So I think what probably happened is that channels 2 and 7 each had a primary network that they got first choice on, but also had secondary affiliations with the other networks, which they each cherry picked. Channel 22 got whatever was leftover -- the stuff that neither channel 2 or 7 wanted to run.

The FCC eventually stepped in and prohibited a network from taking a secondary affiliation agreement or otherwise placing programs on a station that had another affiliation if there was an unaffiliated station in the market. Thus, if channel 2 was an NBC primary affiliate and channel 7 was CBS, then ABC was required to either affiliate with channel 22 or offer its programming to channel 22 before it could offer its programming to either of the network affiliated VHF channels. They could only offer their programming to these stations if channel 22 rejected the shows first. This basically forced ABC (or whichever network) to affiliate with channel 22.

This situation was not unique to Dayton. In Austin, TX, all three networks were affilated with LBJ's channel 7, with only the leftover shows running on the local UHF channels, until the FCC's rules change effectively forced NBC and ABC to take UHF affiliates.

Ironically, CBS has since lost its affiliation with channel 7, and all three of the big networks are UHF in Austin (ABC-24, NBC-36, CBS-42),

with Fox having the only VHF station (Fox-7).

When CBS began to buy stations at a prodigious rate, the second multiple ownership became legal, there was immediate talk about unionizing at a number of non union Infinity stations. The one I worked included. Within a few hours of the first rumblings, and despite the fact that it's a felony do to so, the GM came out of his office and said in the hall, that anyone who thinks that unions would be permitted in the station didn't need to work there, and that anyone who attempted to organize the staff would be summarily terminated.

The rumbles continued for awhile until it was realized, that while we had all been working as non union broadcasters, technology had advanced to the point where efficient voicetracking, previously believed to be too clumsy and unreliable for major market radio, was not only possible, but suddenly attractive. And we all watched with delight as the digital audio management systems went in at CBS/Infinity stations. We had been sold on the convenience, the quality, the versatility of the system, and only a few of us realized what was to come. Until in a staff meeting a jock, distained over the restrictive playlist, and general gag on banter was informed that he could either play along, or he could and would be replaced by the Production Director voicetracking his show. Effective immediately. He was given 15 seconds to decide. With that moment we are realized just how things were going to go.

Clear Channel, and AM/FM are very heavily entrenched as now is CBS/Infinity in digital audio management. And jocks are losing their gigs are a record rate to Prophet voice tracking and other digital disc jockeys. While we as front line broadcasters were sleeping, corporate management was building firewalls.

Make no mistake, in most markets, it's simply too late for
organization to be effective. It's simply too late.

Ask any one who has been replaced by an out of market
voicetracker. Or Art Bell. Or Rush Limbaugh, or Dr Laura.

Ask any engineer who has been displaced by a part time,
'engineer of record'. Or a consultant.

Ask any PD who has been consolidated out of a job. Or any sales
person who is now representing more than two stations in a market.

While the front line has been sleeping, the Corporate Generals
have been reinforcing their firewalls. And for most of us, it's
simply too late.

Unions can't help, when labor itself is expendable.

And no one in Justice, or FCC is going to stand in the way of
the huge profits to be generated by massive broadcast conglomerates
like Clear Channel.

Does the name "Rollerball," ring a bell?

I read Rob Bass's article on oldies programming.....he has some very valid opinions.
But let's look into the future. There will probably some type of oldies format around 30 years from now.

How much of what we're hearing today could survive the test of time. Will TLC or Ricky Martin be valid in 2030? Just wondering!

What makes things worse is that WHCN was my favorite station in
Hartford, now they are really hard to listen to besides being Classic
Rock That Rocks (cough cough) they are Corporate Radio with No
Personality or real local flavor.

I have switched over to WCCC, while I don't care for the heavy metal
stuff they sometimes play I would rather listen to its jock who have
personality then the Jocks at WHCN who sould like they are sucking on
a corporate tailpipe.

First, land mines kill people. Most important to the effort against
mines is the fact that they mostly kill innocent people after the war
is over. To suggest that Clear Channel has done anything even remotely
comparable to laying land mines is ridiculous on its face. You've got
a bunch of painters afraid of losing their jobs. No comparison.

You stated that Clear Channel is an anti-worker company. You neglected
to provide examples and expect us to jump on the bandwagon without
them. What have they done that GM, Chrysler, IBM and other far larger
companies haven't done? Where were you when Gannett sold? If that's to
hard a question, just tell us what Clear Channel has done that's
anti-worker. I know many people who work for Clear Channel and for the
companies they bought. They tell me it's a great place to work.

If you want to help unions, come to New York. Tell all the union
members just how bad publicity by example works. Tell them that we
wonder why it takes five people making $30 an hour to fill a pothole.
We see three of the five drinking coffee while one sits in the cab of
the truck (with coffee) and another actually fills the hole. I see
three of the five featherbedding.

Then they wonder why companies and cities look for ways to reduce the
cost of doing business.

>Most stations get the "oldies" from places like TM Century or RPM...
>

This is especially true for the Cameo-Parkway material. Beware of the resung versions on commercial CDs.

Many of the bigger C/P hits saw vinyl reissues. Abkco had issued some compilation LPs in the '70s, not to mention a 2-LP Chubby Checker hits collection. These were not widely distributed, however. (I found them in the warehouse when I worked for Heilicher Bros. in Mpls. back then, but never saw them in the stores.)

More readily available were the 45s that Abkco reissued. These were all deleted by the late '80s.

The sound quality of these Abkco reissues varied widely. "The Twist" sounded OK on the LPs, even better on the Columbia-pressed 45, but worse on the later vinyl 45. "96 Tears" sounded just great on the Columbia-pressed 45, 'though it was the LP length of the song. "You Can't Sit Down" by The Dovells lacks much of the high end of the original Parkway issue.

So, what IS the story with Abkco and any planned CDs? Are the master tapes in less than pristine shape, or is the Kleinster waiting for "the right time?" Maybe a DVD box of the whole ball of wax? At this rate, we'll all be dead and gone by the time anything leaks out!

Bob,

This is getting serious...

I don't know what's going on, but this evening we did another sports remote, also from analog phone. One of the sports guys, who has missed two games, said that the last remote we did was also really low on his radio! He said he thought we were off the air!

We now have not one, but TWO analog phone sports remotes in question! I have gone back and listened to DAT tape recordings of BOTH questionable remotes. Both tapes were recorded from the actual on-air signal. I even summed both tapes to mono to check for phase problems, and none could be found.

I listened to the tapes in the same studio where the remotes originally aired, and they sound almost exactly the same as they did when we originally broadcasted them. I can hear no noticeable level differences between the phone feeds and the uncompressed recorded spots, other than the lack of HF (High Frequency) from the analog phone line.

I'm going to have a meeting with the station manager and let him screen the tapes, and see what he thinks.

This is going to sound really crazy, but it sounds like you might have a double reversal of phase. If someone listening on a radio outside the station can hardly hear the audio, it's a pretty good bet there's a phase reversal on the audio going into the board. However, if your airchecks, made through the station's monitoring system, show no reversal, it's possible that there is also a phase reversal in the air monitor, which would make your airchecks sound fine in mono.

I know....it sounds crazy, but I've seen that and worse before.

That might tend to rule out phase problems... but the next time you run a sports remote, make sure you have somebody listening on a mono radio. (and make a tape from a mono radio feeding a mono cassette recorder)
180-degrees out of phase will pretty much cancel out everything that's on both channels.

Are you using a digital STL? I understand some stations have had problems with compressed digital audio (music) with some digital STLs... possibly there could be a problem with the codec. We once had a problem with the analog STL receiver at the transmitter and our AM station was barely audible on radios, although it

sounded just fine in the on-air studio monitor for some reason. (This is a mono AM station)

Check to see if anything anywhere was rewired or replaced just prior to the first remote.

738. This was also the case in Toledo

Newsgroup: rec.radio.broadcasting
Date: 2000-02-23 00:00:00 UTC
From: Keith Elster <keithelster@home.com>
Message-ID: <c7%s4.33032$G91.303238@news1.rdc1.az.home.com>

I have an old TV Guide (Detroit/Toledo edition) from 1968 and it has WTOL Channel 11 as CBS/ABC, WSPD Channel 13 as NBC/ABC, and WDHO Channel 24 as ABC/CBS/NBC (I may have the call letters wrong - my old TV Guides have been packed away. I went through them about a year ago).

There is a similar network lineup to Austin's in Evansville, IN, where the lone commercial VHF station (WTVW Ch. 7) is Fox and the "major" networks are all UHF.

Even worse are those cities that don't have enough channels allocated to serve all 4 networks, such as Terre Haute (which has only 3 commercial channels allocated) or South Bend/Elkhart, IN (who's 4th commercial channel is a religious station). Terre Haute has no ABC affiliate at all (WBAK Ch. 38 switched to Fox a few years ago) and South Bend's ABC affiliate is an LPTV. Ditto Yuma/El Centro, AZ/CA, which gets its ABC programming from a translator of (I believe) KNXV-TV in Phoenix. The full-powered stations are NBC, CBS, Fox, or Spanish-language stations from Mexico. There are probably several other cities with the same problem.

But they apparently took some CBS and NBC shows as well, because I clearly remember TV Guide listing all 3 stations with all 3 affiliations for several years. Then, at some point, channel 16 grabbed the exclusive ABC affiliation away from all three stations. Then channel 16 got into some kind of trouble with the FCC, and everything changed again. I'd love to know the exact history.

> Some other Dayton TV trivia: WLWD(ayton) was originally owned by Crosley
> Broadcasting of Cincinnati, who also owned WLWI in Indy, WLWC in Columbus,

Actually, "WLW-C", with the hyphen. I've never seen another station with hyphenated call letters (other than -TV or -FM, of course). I'd like to know how this happened.

> WLW Radio (which was once known as the "Nation Station" as before WWII they

Probably "WLW Television". Was it Crosley's first TV station?

> > WLW featured a lot of "networked" programming such as "The Paul Dixon

> > Kenny Price, the "round mound of sound."

Don't forget the Phil Donahue Show. It started on WLWD in Dayton, and spread to the entire Avco network before moving to Chicago and going into national syndication.

>Probably "WLW Television". Was it Crosley's first TV station?

WLW-AM and WLWT-TV in the same market make sense to me.

>Don't forget the Phil Donahue Show. It started on WLWD in Dayton, and
>spread to the entire Avco network before moving to Chicago and
>going into national syndication.

Phil Donahue broadcast from all over the Midwest, starting with Dayton.
From Dayton he moved to Cincinnati, then Cleveland, Chicago and New York,
going to a larger market each time he moved.

Message-ID: <20000224125330.1563.qmail@web117.yahoomail.com>
Source record: 20801

I've slept since then, but as I recall, 2 primarily carried NBC and ABC (I don't remember which one predominated) and was also listed for CBS but carried none of their prime-time schedule, and, if anything, they may have carried some weekend sports from CBS. 7 carried NBC and CBS (including Huntley/Brinkley) and were also listed for ABC but carried very little from them. 22 was an independent. It was not 22, but now-defunct WKTR-16 that affiliated with ABC upon taking to the air. 2 then became a fulltime NBC affiliate, and 7 became CBS. When WKTR went out of business, WKEF 22 promptly picked up the ABC affiliation. 16 eventually became WPTD, Dayton's Public TV. In the late 70s, the ABC affiliation went to 2 which left 22 with the NBC affiliation. One interesting point: The soap "General Hospital" never caught on in this market (even during the "Luke and Laura" glory days) and has not been carried in Dayton for well over 10 years.

I remember watching WHIO TV's evening news with Phil Donahue and the late Don Wayne. Brought to us by Pantorium Cleaners! Remember the sports guy on WHIO, Lyle Steig? I heard he wound up selling Christmas trees the year after he left WHIO. As I recall Lyle was once a "Dayton Gems" ice hockey player. The sports director of WHIO was Tom Hamlin, one individual I really couldn't stomach on TV.

That's how WB is on our cable system. However, at least in Sioux City IA, WB has an agreement with the ABC affiliate to operate the cable "channel". They ran into a problem... the cable system refused to give the ABC affiliate a channel for the WB "station".. WB even brought in Shannon Doherty & some other WB star for publicity... trying to drum up public support for the cable system to clear WB. The cable system still refused.

> Fox also has a 24 hour cable channel for cable systems

Just IDed as FOX or FOX Net. This was also carried on Dishnetwork satellite for people who qualified (no local Fox affiliate) but a couple of years ago, Dishnetwork began substituting WNYW in New York for the national Fox feed.

> UPN doesn't have to do this since several of the

Sorry, before my time.

I lived in Dayton in 1989-1990 when I was at school at UD.

My favorite is Omar Williams at Channel 2. Actually, I liked the whole
news staff there better than any of the other stations in Southwest Ohio.

Although the two sports guys on 22 were kinda cool, with one rooting for
Cleveland and the other rooting for Cincinnati during football season... :)

Good lord! Omar Williams is still at 2? I left the Miami Valley in 1973. C. K. Elston (the deep-voiced booth announcer at 2) had a son attending West Carrollton HS.
He was one of those anti-establishment types and went by the name "K. C." Elston. I recall C.K.lived in the vicinity of the Dayton Mall.

Is Steve Kirk still on WING? I know he did own the place at one time. Does he still do those horrible Sunday afternoon Tatone Buick comos on TV? Ah, cha cha cha...

So what has Clear Channel ever done to me? Never worked there, I'm not sure I've ever applied there. From time to time I hear cries that unionization could bring back the good old days. You mean a union would be powerful enough to make all these groups throw all of their Prophet systems, Voxpros, DCS, RCS, out the window, quit using satellite programs and make everyone live 24/7? I seriously have my doubts. Would we all have work rules like not to show up more than 15 minutes before a shift and a requirement to leave no more than 15 minutes after? I guess there'd be no more of that hanging around producing bits or learning new equipment to improve our marketability. Don't get me wrong, I think that consolidation has gone way overboard. But realistically, I have to ask if the listeners care at all about who owns what or who's working or not. A layoff at a car plant has a lot more effect. We have about all the same formats we had before consolodation. Finally, lets say our mythical union had enough power to eliminate automation, and, hell bring back AM Top 40, do I really want the job based on "we extended the life of the buggy whip maker"..NO I DONT BELIEVE GOOD JOCKS ARE LIKE BUGGY WHIP MAKERS BUT IF I ONLY COULD WORK BECAUSE OF THOSE CIRCUMSTANCES I'D HAVE TO DO A LOT OF SOUL SEARCHING.

Your examples don't really make your point.

A VoxPro is a short-duration computer editing device, usually used in live stations to edit phone bits to make them short and to the point. Most common usage is contest winners, where the extraneous chatter and pauses are clipped out so the jock can run a winner in a very tight position.

DCS is a distribution system for ad agency spots and short program elements. It replaces slow mail or FedEx delivery, and lets an advertiser or syndicator deliver audio in hours direct to a station production room right from the recording studio where the spot is cut.

RCS does have an automation system, but it is basically intended to run live assist programming, while the most famous RCS product is used by stations and nets to schedule the music library, a process requiring humans. The also do a talk screening system, a newsroom and copy system and other products that are used by humans to do real, live shows.

Prophet, on the other hand, is digital storage system and can be used for automation with voice tracks. However, many stations use it for live assist or simply to run the commercials.

Tyler-Longview, TX is like this. Channel 7 is ABC, 51 is Fox, and 56 is
NBC. CBS has no local affiliate in this market: although when 51
signed on the air in the mid-80's they were CBS, they dumped CBS in
favor of Fox in the early 90s.

This used to be the case in Montana as well (and some other very rural parts of the U.S.).

A small city could only support one or two TV stations, so usually one was primarily a CBS station with the right to cherrypick some ABC shows...and the other was primarily an NBC station with the same right to pick off popular ABC shows when NBC's offering lacked good ratings.

Then in the 70's when ABC pulled ahead of NBC thanks to its sitcoms and Monday Night Football, some stations switched to primary ABC affiliation with NBC shows being cherrypicked.

These days, I guess with cable penetration so high, stations in these rural markets stay with one network at all times. If you live 80 miles from the CBS station, you'll probably have cable or a satellite dish and get CBS that way...or maybe the CBS station will put a UHF translator near you if you live in a sizable town.

The exception is where there is only one commercial station for perhaps 100 miles around. Those stations still have affiliations with the big three networks...such as Miles City, Montana or Presque Isle, Maine.

By the way, in low population areas, the WB offers its programming to cable providers to create an artificial station. For instance, in rural Texas where there are no WB stations, the local cable system can start its own WB station. Warner Bros. provides 24 hours of programming, the cable outlet gets to run its own local commercials during some breaks...and it even gives its station a call letter name like KTWB. Fox also has a 24 hour cable channel for cable systems with no local Fox station...although I don't think they go through the formality of calling the Fox channel by a set of call letters as if it were an over-the-air channel. UPN doesn't have to do this since several of the nation's superstations (WWOR NJ, WSBK Boston, KCOP L.A.) are UPN affiliates. WGN is still a WB affiliate in Chicago but its national feed no longer carries WB shows...they're blocked out and a movie runs in their place.

The hyphen was never part of the official call letters. It certainly
looked that way though in all the publicity material.

> > WLW Radio (which was once known as the "Nation Station" as before WWII they

At first, the FCC didn't allow -FM and -TV suffixes. If there was a
WLW, there could not be a WLW-TV - so they used WLWT instead.
Apparently they never bothered to change it. Some other examples were
WMCT Memphis (now WMC-TV), WCBW and WNBT New York. (now WCBS-TV and
WNBC)

David Eduardo confused two or three sound-alike computer audio tools in his reply to Brad Lovett when he said:

>DCS is a distribution system for ad agency spots and short program elements.
It replaces slow mail or FedEx delivery, and lets an advertiser or syndicator deliver audio in hours direct to a station production room right from the recording studio where the spot is cut.<

I believe what Brad Lovett meant when he referred to DCS is the broadcast automation system made by Computer Concepts Corporation of Lenexa, Kansas.
http://www.ccc-dcs.com

What David Eduardo mistakenly referred to as "DCS" above is DGS, the common name for the "ADVantage Audio Delivery Service", a spot distribution system by Digital Generation Systems of San Francisco. Studios and Agencies transmit over RSTs (record/send terminals) to DGS's distribution hub, while radio stations typically have simple RPT (receive/play terminals) which receive only on either dedicated POTS or ISDN phone lines.
http://www.dgsystems.com

Another sound-alike in the spot distribution field was DCI - Digital Courier International of Burnaby, British Columbia, which introduced a more complex two-way widows-based ISDN only system. Although it offered a more flexible system than DGS including the ability to send audio and email point to point between any points on the network, it was unable to overcome the four year head start, never caught fire and sold out to DGS (under financial stress) in early 1999.
http://www.digitalcourier.com

Digital Generation Systems is now under the control of Scott Ginsburg (Chairman), Matthew Devine (CEO) and Omar Choucair (CFO). All three are alumni of Evergreen Media (which became Chancellor, AMFM and soon Clear Channel).

Source record: 20813

I don't claim to know all the new toys (my last station was state-of-the-art for 1975 except for the Digital Juke Box automation.) I am aware of DGS, I thought there was a company or system called DCS which was a supplier of broadcast automation, or products that are useable with walk-away automation.

But my point remains, does anyone think AFTRA or any other union would be powerful enough to require groups like Clear Channel to get rid of its automation? And if there was what would be the other ramifications (not being able to get trained on Voxpro, etc?).

Nice to see Dayton being a subject. Steve Kirk is long-gone from WING and retired in Florida (he appears on a very occasional commercial in the market). WING is now doing ESPN mixed with CNN Headline, religion (I fell asleep w/WING on one night and woke up to this strange End Time Prophet guy--and not as in system.)and infomercials. They left music programming over 10 years ago. Omar Williams just retired a couple of years ago, though for a while 2 kept him doing commentaries for awhile, he was summarily fired from that.

I seem to recall Donahue going directly to Chicago from Dayton, with a new syndication company, not making stops in Cleveland or Cinn, though he certainly may have done remotes from there.

The AVCO chain consisted of WLW-T, Cinn., WLW-D, Dayton, WLW-C, Columbus, and WLW-I, Indianapolis. Only WLWT retains the call (WDTN,WCMH,WTHR new calls for Dayton, Col, Indy. 2's signal had to be kept very weak due to proximity with 5, but when they ceased to be co-owned 2's power was able to be increased substantially. The cable finally moved them to ch.9 since the air signal overrode their cable signal.

This affects music formats, too. I worked in an oldies station once
and discovered a lot of 50s/60s songs are either in fake stereo that
produces weird effects in mono, or were just recorded with phase
problems. Of course on your stereo monitors it sounds just fine.

TM Century....I have two friends here locally that provide syndicators with the vinyl that will never see the light of day on CD. Their vinyl (since they are collectors) is usually VG+++++ to Mint. Cedar or Sonic Solutions processing usually cleans up the vinyl so it sounds great on CD.

The lack of Cameo Parkway material on CD is due to the fact that the masters are controled by Allen Klein (ABKCO). He also has/had some interest in the Beatles and Stones at some point.

If you go over to the oldies newsgroup, he is cursed with regular frequency.

>
> They were sold to Avco sometime in the 60s.

The Cincinnati Reds used to play in Crosley Field. Did the same family
once own both the WLW stations and the Reds?

Even at "only" 50,000 watts, WLW's signal was massive when I lived
in Columbus (1968-75). At any time of the day or night, WLW came in
as loud and clear as any local Columbus station. WLW radio carried all
Cincinnati Reds games, which is one big reasons that Columbus
baseball fans followed the Reds, not the Cleveland Indians, in the
1960s and 1970s.

(Another reason, of course, is that the Big Red Machine
was a great team, while the Indians were perpetual cellar-dwellers.
The Indians had no radio outlet in Columbus either.)

Back when radio network affiliations actually meant something,
NBC had no affiliate in Columbus. We had ABC on WTVN-610,
CBS on WBNS-1460, Mutual on WMNI-920, but if you wanted NBC, you
had to listen to WLW from Cincinnati.

Actually RCS Master Control does voice-racking and automation quite nicely.
Although we are primarily using it for live assist, we do use it for
voice-tracking on our stations in Buffalo, NY. 1050 CHUM in Toronto does
voice-tracking with RCS as well.

>between any points on the network, it was unable to overcome the four year
>head start, never caught fire and sold out to DGS (under financial stress)
>in early 1999.

yeah., it was funny...when they finally put in the new DGS software,
it was so full of bugs that stations couldn't see what the hell was
being sent to them, and if anything was there or not, or the sender
couldn't send at all...prompting dubs out of louisville that were
poorly done (likely due to the system being screwed up so bad) for
material I could walk to the production house in 10 minutes here in
canada....weird how it works...

for the record, despite a shakey start, the new DGS software is
installed in my DCI terminal is working well....though I never get
spots from "The Bay" anymore though the thing....likely it's because
the rate went too high...I get reels instead....

I guess us DCI people were lucky, we paid nothing for the terminal to
receive...then all of a sudden when DG took over, it was
$1500/year...ouch!!!

772. EAS doesn't work when the LP EAS station goofs!

Newsgroup: rec.radio.broadcasting
Date: 2000-02-26 00:00:00 UTC
From: RobBass2@aol.com
Message-ID: <c1.136b624.25e8e723@aol.com>
Source record: 20828

This morning (Saturday, Feb 26th) at about 1:45 AM CST, I was listening to a secondary EAS station which follows the lead of the Local Primary EAS station, WBAP-AM. We had some thunderstorms in the area and so EAS was in use quite a bit. But at the time I was listening, I heard one EAS activation that I consider to be, a major screw-up.

The retranmission sounded something like this... The EAS Header code chirps and the old EBS tone air, followed by about :90 Seconds of what appeared to be a country song. Then I heard some announcer at WBAP come on and say something like "WBAP-AM 820, the leader of the Emergency Alert System... We now interrupt our regular programming..." Next I heard another tone which the National Weather Service uses, followed with about :15 seconds of a voice from the NWS beginning to explain the reason for the activation. I never actually heard what the activation was for, because the secondary station's EAS box apparently ran out of memory and cut off the rest of the message.

We're a little over one year into the EAS system and here is yet another example of an EAS PRIMARY station that can't get it right! This whole error was the result of someone at WBAP not using the correct procedure for activating the EAS! Not only did WBAP fail to get it done right the first time, they also never attempted to correct this mistake by transmitting the alert a second time. At the same time, their mistake caused their call letters to air on the secondary EAS station! This is scary, folks... VERY scary!

"Good. Nobody wants to hear EAS broadcasts."

So you're saying that you don't want your radio programming interrupted, even if there's a tornado or a toxic spill coming your way? Sounds a little short-sighted to me.

I will, however, say that I don't consider the EAS mandate justifiable, since I cannot conceive of any situation where (A) the Federal Government would have a good reason to get emergency information out to the people quickly, but (B) broadcasters would not be willing to carry that information voluntarily.

Note that any broadcaster can choose (in advance) not to carry national emergency broadcasts -- but if they do, they have to go off the air in that situation. If the situation is so urgent, why not just force *every* station to carry the feed with no exceptions allowed? If that's not necessary, then why is it necessary to regulate in this area at all?

WHAS(AM) in Louisville was almost as bad -- arguably worse -- for the first few months; those guys were continuing to do weather warnings with *only* the EBS attention signal tone, which an EAS decoder downstream won't respond to. It took them quite a while to come up with a way to originate EAS weather alerts with the codes for the affected areas (they don't rebroadcast NOAA).

"Powell Crosley did indeed own both WLW and the Reds."

And WSAI, before the FCC duopoly rule. Back when WLW was running 500 kW, it operated as a national service and would not carry any locally-oriented programming or local commercials, apparently for fear of alienating listeners outside the Cincinnati market. Crosley operated WSAI as a local service at the same time, and initially the Reds broadcasts were on WSAI instead of WLW.

The boxes are only required to have two minutes worth of memory for storing voice messages from the originating station.

>We're a little over one year into the EAS system and here is yet another example of an EAS PRIMARY station that can't get it right!<

We're actually more than three years into the system. It was first required for radio and TV stations as of 1/1/1997.

However, point well taken. Another example of the FCC fixing something that wasn't broken, and making it hopelessly complicated in the process. The poor schmo at WBAP probably did the best he/she could, given what was probably minimal training....something on the order of "follow these instructions if you receive an alert," with no follow-up training or dry runs. The format clock is, of course, paramount. <g>

Wrong. Radio's losing listeners because of screw-ups like that. Used to be
people went to radio EXCLUSIVELY for emergency/weather info. Stupid attitudes like that displayed at the primary station (probably a reflection of
your attitude as well) make the system a farce.

EBS got changed to EAS supposedly to make it work better. Actually, in areas where people cared about it, EBS worked well. When I was at WHO-AM, the primary station for the state of Iowa, we had it down to a fine science. So well that county and state authorities actually USED the EBS
system to disseminate information to all stations!! (I remember being in
shock when the county emergency management co-ordinator asked me on the scene of an anhydrous leak if he could trigger an EBS so he wouldn't

have to call all the area radio stations. We did it!)

> short-sighted to me.

No, it's just another way for busybodies, hand-wringers and hysterics to
intrude on you when you think you've found some respite from them.

Look at the junk you worry about, worries that don't show up on the horizon
of anybody normal. I appreciate the anxiety news format is a hot one but it's
not for everybody, okay?

WTVN 610 here in Columbus even broadcasts a tone every minute when there's
a thunderstorm anywhere in Ohio. It could be made amusing at least by having
teletype machine clatter.

Do you know that 100,000 people die on a normal day? Add that to the warning.

I happen to like weather radio (less now that Perfect Paul reads it) for its
inane warnings about wearing rubbers and am building up a small collection
for a weather hysteria page, but not when I'm listening to something else.

The reason to like weather radio used to be the delivery. Try the real audio
http://home.att.net/~rhhardin/weather.ra (63k), which was followed one week later
by a woman trying not to be like it, http://home.att.net/~rhhardin/weather2.ra (61k).
I never heard the woman again, for some reason. Perhaps she went into commercial
broadcasting.

==
Here's a part of an essay I liked on the anxiety format that's so successful
among the 17% who listen to it. Speed-readers, read the end of the first
paragraph ``News broadcasts, ...'' ''

``Every period has its timidities. Do I dare read Ovid?
Do I dare disbelieve in immortality? The threat of nuclear
warfare may indeed spread anxiety; yet people have always
dreaded an eschaton, a violent end to time. Still, after
all the qualifications, there does seem to be an alarming
cultivation of anxiety in our day. It seems part and
parcel of this new open-ended proliferation of anxiety
that we cannot pin down the reasons, which themselves
proliferate like the spawning images in a state of panic.

We might be inclined to connect our modern anxiety with
the bustling chaos of urban life, as opposed to farming
communities, where anxiety is annual, expected, ritualized.
We might argue that a medieval worldview, with its clear
distinctions, its sure sense of boundaries, managed anxiety
better than the relativisms of the early modern and modern
periods, with their two-edged gift of infinite human
possibilities. With many qualifications, we must make
such distinctions stick. But whatever the causes, anxiety is
on us like a plague these days. Not long ago thrillers and
murder mysteries were mostly about criminals with distinct
motives. Now they feature the serial killer. Unlike the murderer
who killed, fulfilled his purpose, and hoped to remain innocuous,
the inexorable serial killer with his open-ended string of crimes
hopes to become famous as a source of anxiety. News broadcasts,
themselves great organizers of anxiety, regularly contain health
segments in which the public is invited to become anxious about
what it eats, what it buys, how it seeks pleasure. One set of
experts steps forth to inculcate anxiety, another to teach us
how to live with it. What do those in the know actually
know? They always claim to know where our true concerns should lie...

``...This new space, ``social anxiety,'' seems to be an extensive
one. There's no housing shortage when it comes to social anxiety.
Today we have environmental anxiety (the main subsets being clean
air, clean water, clean sunlight); food anxiety; trash anxiety;
hatred anxiety; dirt anxiety; dating anxiety; consumer anxiety;
parenting anxiety (some of the subsets being toy, spanking, lessons,
college, and money anxiety); academic anxiety; television anxiety;
political anxiety (subsets too numerous to mention); fashion
anxiety; hair anxiety; wealth anxiety; job anxiety; speech anxiety;
endangered species anxiety; crime anxiety; medical anxiety;
alcohol anxiety; smoking anxiety; and so on through every
compartment of modern existence...''

That's the 17% hysterics. Perhaps they are a good commercial audience,
I can't say. I'm just in the 83% that wants to get away from them.

I notice that stations are happy to report on people squished in traffic
accidents and move cheerfully on, which is the right attitude in my opinion.

See John & Ken on this aspect of traffic reporting.

I myself would add car crash sound effects to the helicopter traffic reports
at the right instants.

I can. if a broadcaster is so greedy and so lazy as to run a 24-hour
automated, unmanned operation, how is any emergency information going
to be broadcast without the EAS mandate?

In every case I can think of in which EAS has been activated in our
area (and we're the EAS primary station here), we had already been on
the air with the information, in a couple of cases for several hours.

OTOH, we are one of only two station groups in the market with active
news departments. Even though we are #1, it remains true that in a
fragmented marketplace, the majority of listening is to stations that
do little or no news, are automated much of the time, and would likely
not know to inform their listeners of anything beyond traffic and
weather (and that only in drive time) without EAS.

>We're a little over one year into the EAS system and here is yet another
>example of an EAS PRIMARY station that can't get it right!

They're not the only one. Here in MS, we had a state-wide dry-cleaning alert in the first year of EAS. The primary ran the chirps and the EAS tones, followed by a 30-second spot for a dry-cleaner in Jackson, and then the EOM. The dry-cleaner got stade-wide coverage as the alert was picked-up and rebroadcast by the statewide relay stations and then forwarded on to everyone else. If I ever get a spot on my shirt, I'm relieved to know we are covered in the event of a dry-cleaning emergency.

Seriously though, EAS is a joke. It was the government's attempt to fix something that wasn't broken. Stations that strive to serve their communities are going to air weather watches and warnings regardless. We didn't need a $3000 magic box to do it, nor do we need to rely on jocks at the LP-1, none of whom have a clue.

At my stations, we are automated/satellite. But if there's bad weather, somebody is here for the duration. We have the NOAA weather wire, a DTN terminal, an Internet weather source in the control room, NOAA weather radio (mostly worthless) and the Weather Channel. Yes, I could rely on relaying bogus stuff from the LP-1, but why do that when I can do it right myself?

If that's the problem -- and it apparently was, since unattended operation was one of the reasons cited for developing EAS to replace EBS -- then a better answer would be to restore the requirement for a licensed operator on duty. Radio and TV got along fine for decades with duty operators. Why not now?

789. Indiana RadioWatch

Newsgroup: rec.radio.broadcasting
Date: 2000-02-26 00:00:00 UTC
From: Blaine Thompson <phredd@indy.net>
Message-ID: <Pine.SUN.4.10.10002261749480.27356-100000@indy3>
Source record: 20845

Northeast

Fort Wayne Arbitron news: The Fall, 1999 ratings came out and they show Country/WQHK in first place, followed by Standards/WSHI. Notable gains include WSHI, and AC/WAJI. Notable losses include Rock/WBYR, and Rock/WXKE.

Condolences to the family of Adolph "Deac" Dietrich. Dietrich was a key founder of Religious/WLAB (88.3fm, Fort Wayne). He died January 22, at the age of 81.

Northcentral

We goofed: CHR/WNDV (92.9fm, South Bend) is owned by Artistic Media Partners. Sorry John :-)

Kokomo news: Hoosier Broadcasting adds its application for the open allocation on 91.3fm in Oakford. The only other application is from Pensacola Christian College.

Northwest

The Fall, 1999 Arbitron ratings are in for Lafayette. Country/WKOA dominates, followed by CHR/WAZY, Rock/WKHY, Oldies/WASK, and Alternative/WGBD rounding out the top 5. Rock/WKHY & CHR/WAZY get nods for notable gains, while Country/WLFF took a hit.

Other Lafayette News: At CHR/WAZY (96.5fm, Lafayette), Dave North heads to PM Drive. Bob Richards takes mornings, with Larry Clisby. John Williyard is now the station "voice" at Country/WKOA (105.3fm, Lafayette).

We know a little more about the CP for 91.5fm in the Lafayette area: It now has a callsign! WFWR (91.5fm, Attica). The CP shows 160 watts at 171 feet from a tower on U.S. 41, south of Attica. Astute Indiana radio historians will note that WFWR used to be on 1090am in Fort Wayne (now WFCV).

Central

A new high school station hits the airwaves: WRGF (89.7fm, Greenfield) launched at 1:30pm on Saturday December 4, 1999. Under advisor Tim Renshaw, the station is on the air 24-hours a day, directed and programmed totally by students. The format according to Renshaw, is "current/classic rock, with heavy emphasis on local news, public affairs and local sports." Renshaw adds that they plan on working with other high schools in the county for additional coverage of sports.

The saga of Jazz/WYJZ (100.9fm, Lebanon) versus Mystar is coming to a close. Owner Bill Shirk and Mystar agreed to a deal whereby WYJZ moves their tower closer to Indianapolis, but directional, away from Indianapolis. They'll also raise power to 6000 watts.

Country/WFMS (95.5fm, Indianapolis) has a new morning show: Trapper John, Deborah Honeycutt (from sister WGRL) and Jim Denny.

Bob & Tom add these stations to their burgeoning network: Sports/KXXT (1340am, Santa Barbara, CA), Sports/KAVL (610am, Lancaster, CA), Rhythmic Oldies/WJQR & WFBJ (105.5fm & 105.3fm, both Jacksonville, FL), Oldies/WNKK (92.1fm, Carthage, IL/Burlington, IA), Rock/KXUS (97.3fm, Springfield, MO), and Classic Hits/WWUZ (96.9fm, Bowling Green, VA).

Westcentral

WSDM-AM (1130am, Brazil) and WJSH (1300am, Terre Haute) flip formats from gospel to sports as "The X", on March 1. WSDM's call letters change to WSDX while WJSH is now WSJX. Programming will come from a variety of sources including: One-on-One, Jim Rome, Network Indiana (sports news), MRN, and the Indy Racing League.

We know more about C.V.L. Broadcasting now. For those wondering, it's a subsidiary of First Corbin Financial in Corbin, Kentucky. They own stations in Crawfordsville and Terre Haute.

Southeast

Hot AC/WQSH (98.9fm, Salem/Louisville, Kentucky) flips calls to WZTR.

Calvary Chapel (owners of KAWZ/Twin Falls, ID) have applied for another translator at 91.1fm in Hamburg, on the north side of Louisville. One would imagine the folks at The University of Cincinnati's WGUC (90.9fm, Cincinnati, Ohio) aren't too happy to see this. There is a petition to deny filed with the FCC and we imagine that they're the ones involved.

The applications by Good Shepherd Radio and Willtronics Broadcasting for the 96.9fm allocation in Hardinsburg are both dismissed by the FCC. 96.9fm is awarded to Hardinsburg Radio out of Mount Washington, Kentucky.

Southcentral

Trey McKain, part-timer at County/WKKG (101.5fm, Columbus) exits for mornings at Rock/WBHG in Concord, New Hampshire.

The open allocation on 105.7fm in Tell City goes to Tell City Broadcasting, who plans on running 4800 watts from the WXCM tower site southeast of Tell City.

Southwest

At Rock/WGBF-FM (103.1fm, Henderson, Kentucky/Evansville), they have a new lineup:

Mornings: Bob & Tom (syndicated from WFBQ/Indianapolis)
Middays: Bobby G. (from afternoons)

Afternoons: Turner Watson (PD/MD)
Nights: Fatboy (from overnights)
Overnights: Slick Nick (from weekend/part-time)

Why did they have this change? Julie Raymond heads to sister Hot AC/WDKS (106.1fm, Newburgh/Evansville) to do middays.

A group known as the "Indiana Community Radio Corp." has filed for a station on 90.1fm in Wadesville, just outside of Evansville. They've also applied for an allocation at 91.7fm in Madisonville, Kentucky. We did some research, but can't find anything out about them. Anyone know?

Soft AC/WAMW-FM (107.9fm, Washington) flips calls to WYER, as a part of an LMA with Evansville's WSJD.

Lamb & Lion Communications files for a new CP in the Evansville area at 90.1fm, allocated to Mount Vernon.

Otherness

The LPFM decision by the FCC has had a major impact on translator stations. Their January decision means that new LPFM stations must protect existing translator stations. Some of the big players in translator stations (CSN International, American Family Association, etc.) have read this as a cue to put up more translator stations to further their stranglehold on the non-commercial spectrum, thereby limiting what legitimate, community radio stations can do, under the new LPFM rules. Instead of listing each group and the frequency(ies) they've applied for, within our various regions, we'll list them here. By no means are we angry at groups in Indiana that have translators to serve areas which can't be reached by existing allocations (such as Indiana University's translators in Columbus, and Kokomo, etc.). Remember these are applications, not grants:

Calvary Chapel: 91.1fm, Hamburg (mentioned above) (relays KAWZ/Twin Falls, ID)
Family Worship Center: 89.5fm, Olney, IL/Vincennes (relays WJFM/Baton Rouge, LA)
Family Worship Center: 90.3fm, Jasper
Family Worship Center: 89.5fm, Loogootee
Family Worship Center: 91.1fm, Madison (after having their app. for 88.7 in Madison denied!)
Family Worship Center: 91.7fm, Shelburn
Pensacola Christian College: 88.5fm, South Bend (replays WPCS/Pensacola, FL)

That's it for this issue! See you in two weeks...

God yes, leave it off. I have no idea what an ``actual emergency situation''
would be. There was a nice ABC broadcast worrying where Steward's Lear Jet
would come down that was so inane that I saved it. I suppose that's an
actual emergency situation.

http://home.att.net/~rhhardin2/anxiety.ra (59k)

Radio guys, some of them, get all bright-eyed and bushy-tailed, as Jean
Shepard put it, when there's news. These people are not well. Stay away
from them.

You can see one thinking up an emergency dissemination plan and having
an actual orgasm.

Every radio station should be equipped with a large empty cardboard box,
labelled EMERGENCY, SPEAK INTO BOX.

A tornado? We got a lot of those in Ohio when I lived there ...
they're something you want to know about, so you can get into
the basement.

A hurricane?

A flood?

There really are good reasons to interrupt regular programming
when natural disasters are impending.

What do you think are the chances of KSBW (channel 8, Salinas) switching
from NBC to ABC?

KNTV's transmitter isn't moving with the power increase - its signal
will actually *improve* across the Salinas/Monterey area. Their Grade A
already easily encompasses both cities. Indeed, KNTV's and KSBW's
transmitters are only 5 miles apart - they won't both remain NBC
indefinitely...

Unfortuntely, they test it in my area often. But when there's an actual emergency, you won't see or hear it! They only put words on the top of the screen on TV. On radio, they say it's from EAS but don't use that horrible sound. I don't understand why they test something so often that they don't use! Does anyone have the answer? I have a major fear of the EAS/EBS tests and have had it since chlildhood. I wish they would only use that noise when it's really an emergency! Then I might be able to live without constantly trying to keep my mind occupied so I won't think of the tests.

From: Jeremy Styninger <lagnaf@mtco.com>
Message-ID: <3.0.6.32.20000226231056.007983e0@mtco.com>
Source record: 20751

The reason it is tested is to test it. Things sometimes break. When a
piece of
equipment is considered important, it gets tested. In this case the
testing is
required by federal law. The FCC went through all the proper procedures to
implement the new EAS system with their Notice of Proposed Rulemakeing,
testing was commented on at that time. All U.S. citizens had their chance to
comment on it.

Also required is that certain high level messages relayed to the EAS box be
broadcast, quickly. e.g. A message from the President or very big national
danger or crisis.

That's about all that is required. Other uses like weather alerts and such
are
not, and if a station chooses not to use it for those applications then
they don't
have to. They may be misguided, lazy or ignorant.

On the other hand there are some local/state areas that have a complete
interconnected system that is accurately set up with all the event codes and
area codes and such so that it uses much of the EAS systems potential.
However this requires a great deal of planning and organization among the
broadcasters, Civil Defense, law enforcement and others. These well planned
local nets seems to
happen mostly in areas around chemical/nuclear plants and/or where there is a
higher incidence of sudden threatening weather.

Perhaps someone can point out a few of the areas where EAS planning has
been a success. Houston/Galvaston perhaps? I clearly remember the upbeat
success
in Radio World, but can't remember teh places right now.

True. But they're also responsible for the also-ran ABC affiliate here
in Nashville.

(though I suppose being hemmed in by ABC-only markets in Jackson, Tenn.
and Bowling Green, Ky. doesn't help...)

Interesting - did it say where to? (guess I could just redownload the
Engineering Database...)

I suppose the old channel 11 allocation in Willits is gone with the DTV
conversion - don't know if channel 11 is allotted for DTV anywhere up
there - so I suppose they could move to Monument Peak along with
channels 36/48/54 & get an improved signal in the North Bay. Their DTV
channel is 12 - I wonder how far they can go with that without running
afoul of KHSL NTSC-12 in Chico?

Source record: 20760

KTLA? Young owns KCAL Ch. 9. KTLA is owned by Tribune. Check here:
http://www.metronet.com/~chipk/tv/LAX.html

Regarding KRON's future plans: When KTVK Ch. 3 here in Phoenix lost its long-time ABC affiliation to KNXV Ch. 15, they expanded their local news big-time and have been successful at it. They are a bit too heavy with the "stuff" (as they call it), but the quality of hard news reporting has not diminished. KRON sounds like they are going to do the same thing, although a lot can happen in 2 years. Last I heard, KTVK is still 1st or 2nd in the ratings, neck-and neck with NBC affiliate KPNX Ch. 12, so they have done well as an independent.

Tribune ownes KTLA 5, which is the WB station in LA. Young owns indy
KCAL-TV 9.

KTLA is very successful. It seems to edge out Fox KTTV 11 a lot of the time.

Radio-Info.com continues to expand. We currently offer general radio information and/or message boards for the following U.S. regions/markets:

Bay Area
Interior New England/Upstate New York
Mid-Atlantic
Phoenix
Tampa

We also have the Global Radio Message Board for discussion of radio from coast to coast. Current discussions include the recently released Arbitron ratings.

Another message board on our site, the World Wide Vibe, focuses on the world of dance music, including dance music radio.

Come and check it out if you get a chance!

Thanks,

What LOCAL pipsqueak stations?

Oh, you mean the ones that can only afford to operate with 24-hour
satellite automation.... So you'd give emergency warnings to both
listeners, but nobody else in the area?

The reason why stations are licensed to operate with high power and is
so that they can serve a large area -- and service includes providing
emergency information. (Indeed, it's one of the few actual service
requirements left!)

wrote:

>
>Yes, a tornado .... but only locally. I'm NOT INTERESTED
>in tornados in Peoria. Maybe one in Monticello coming
>this way.

Here's an incident that points out one of the problems with EAS.
Yesterday (2/27) the National Weather Service used EAS to blast out a
tornado warning for Fresno County, CA. Since the NWS downsizing of a
few years back, the only NWS office serving the entire San Joaquin
Valley (a vast area, bigger than several eastern states combined) is
in Hanford, CA.

Somebody in Hanford goofed, and used the wrong EAS codes, so the EAS
warning went out on our station, which is the primary for Bakersfield,
more than 100 miles to the south of the warning area. The wording of
the warning was correct, but airing it on KUZZ was unnecessary and
probably caused some unnecessary anxiety among our listeners.

It is this sort of error which erodes confidence in the system and
contributes to a "cry wolf" effect in which people tend to ignore
legitimate warnings. Under the old system, which was not automated,
we could have prevented it, because the operator on duty in the
station could have questioned the obvious mistake.

Been hearing rumors that Mark Stevens, part of the morning team with Jim Pruett, and Eddie "the Boner" Sanchez, was fired for saying some negatory things at a staff party? How much truth is there to this.

Another reason could be that Clear Channel is buying AMFM (who owns KLOL) and that there are going to be some staff, probably format changes not only to KLOL (who's been rock for 30 years) but to the other channels that are being bought out. Any info on what changes to expect in the Houston area?

Leykis is also doing well here in Los Angeles, on KLSX, Howard Stern's
outlet. I agree, he was great with politics, an interesting
counterbalance to Limbaugh; now, he is predictable and tiresome. He does
have an amazingly versatile voice, but nowadays it seems pretty stagey
and forced.

Heres what it is as of this week:
6 to 10am Mason & Kolinsky (Live)
10am to 2pm Leslie Gold- The Radio Chick (Live)
2 to 7pm Opie & Anthony (Live)
7 to 11pm Don & Mike (Tape Delay)
11pm to 3am Ron & Fez.Com (Live)
3 to 6am Lovelines (Tape Delay).

The changes Tom Leykis is out. He was on 7pm-10pm.
Lovelines was on 10pm-12am Last nights show
12am-1am Best of. 1am-3am Live show.

As far as weekends Saturday Night Rocks 10pm-2am and Vin Scelsa's
IDIOT'S DELIGHT Sunday 8pm-2am (or so) are staying.

Between those weekend shows WNEW is still playing a mix of 60- early
90's rock with, Still at WNEW from the Rock format, Tony Pigg Sat. &
Sun. Late Mornings. And Jane Purcell Sat. & Sun Evenings.
They also hired Tom Rich to do Mornings Sat. & Sun.

WNEW in NY Replaced Leykis with Don and Mike. But since Tom still has
an active contract with WNEW Tom's best of show will air on the
weekend.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,
hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

Won't translator applications have priority if they are filed before the
exact LPFM window dates are announced? Or was I dreaming?

>what is the power limit on the FM transmitters that drive in movie theaters use?<

These systems fall under Part 15 of the FCC rules, which state a field strength limitation (250 uV/m at 3 m), rather than a power limitation. (47 CFR § 15.239) A power output of perhaps 1 or 2 watts, distributed around the parking lot via "leaky" coax, would probably do the trick.

:> Even worse are those cities that don't have enough channels allocated to
:> serve all 4 networks, such as Terre Haute (which has only 3 commercial
:> channels allocated) or South Bend/Elkhart, IN (who's 4th commercial channel
:> is a religious station). Terre Haute has no ABC affiliate at all (WBAK Ch.
:> 38 switched to Fox a few years ago) and South Bend's ABC affiliate is an
:> LPTV. Ditto Yuma/El Centro, AZ/CA, which gets its ABC programming from a
:> translator of (I believe) KNXV-TV in Phoenix. The full-powered stations are
:> NBC, CBS, Fox, or Spanish-language stations from Mexico. There are probably
:> several other cities with the same problem.

: Tyler-Longview, TX is like this. Channel 7 is ABC, 51 is Fox, and 56 is
: NBC. CBS has no local affiliate in this market: although when 51
: signed on the air in the mid-80's they were CBS, they dumped CBS in
: favor of Fox in the early 90s.

Then there's K-Spew 2 (er...KQTV) the half-assed ABC affil. in St. Joe, MO.
St. Joe is its OWN market, with 2 stations (the other one is known as Amen
16). Almost all of the major KC channels are on cable and give K-Spew a run
for it. And K-Spew isn't on cable outside of the market to the south. Half
of the 'Hometowns' they claim aren't even able to get them on cable because
KMBC forced the blackouts in thier territory!

Its sad when KQ2 is getting beaten by KMBC (KC's ABC affiliate) most of teh
time.

Oh no! Attempting to serve the listeners? What is the world coming to?
Passing along information about life threatening situations should be a
crime. Those people out on the edge of the signal shouldn't be listening
to some station 75 miles away.
>
>This is extremely irritating ... ESPECIALLY since
>they also have an AM station with a more or less equal or

I know exactly what you mean. Why just tonight while driving in a heavy
storm between Galesburg and Peoria, WIUM Macomb was the only station I
could find with current weather information, even though it was for an area
barely served by them. What a waste when WMBD Peoria is probably doing a
great job if only I could pick it up at night this far out. Geez, I
thought, their stereo is probably off too, wish I had my scope with me.

The listeners are tuned in to what they want to hear. If there's a market
for hysterics they ought to have their own station. All-anxiety-all-the-time
would have a following, perhaps interspearsed with all-grief to get
those valuable manic depressive demos too.

Intrusion on everybody by some hand-wringer is the hand-wringer's whole idea.
Hence the incessant tests, by the way.

They make weather radios with alarm features you can set up, sort of an
opt-in for the hysteric audience. Why not the same for ``valuable information
about life-threatening situations?''

Why can't we have the same cheerful attitude about life threatening situations
elsewhere as stations already do about traffic accidents?

Cross-posted to: rec.radio.broadcasting,alt.radio.broadcasting

Hello!

I apologize in advance if this is not the right place for this message, but I am giving it my best shot...

I'm on the executive board for my college radio station, WWPI. We currently broadcast over the Internet and on our campus cable TV network. Since the new FCC ruling on low-power FM stations, we have moved forward with plans to get a 10-100 watt license this spring when filing begins.

This coincides nicely with the recent start of construction of a new building on our campus that will be opening next year, and we are moving our studios into it. Approval has been given to construct a tower and necessary equipment in the building; however, I don't know exactly what we need!! As far as I know, there are four main items:

1-Antenna
2-Tower (we're going for no more than a 30 footer)
3-high-quality coax to run from roof to studio
4-Transmitter

Am I missing anything else major? Also, I am curious, are there any good websites that has tips for a new station starting up? What brands of antennas/transmitters does anyone recommend? ANY help would be appreciated!!!

Thanks for your time.

Have fun! But remember, no applications are being accepted yet. That idiot Kennard said May, which means mid-2001 at the earliest. The NAB has filed suit to stop LPFM and a bill has also been introduced in Congress to kill it.

As an educational institution, why can't you just apply for a NCE-FM?

>KISS 102.7 has a great signal for a 6kw.

Speculation from other area broadcasters is that he's running more than 6 kw. That appears to be rather common these days, and there's nobody at the FCC to catch it. For the longest time, WCKS didn't even have a legal main studio and the FCC didn't do anything about it (the rules have since changed).

CA was in NJ asked...

>Does Arbitron do breakdowns by daypart? I'd be interested to compare the weekend rock format with the weekday talk format.<

Yes, they do.

With Arbitron's "Maximiser" software, it's possible to get a read on any time segment for which 30 or more diarykeepers logged listening. In a market as large as New York, you might be able to get some kind of read out for a single hour among the 1512 included in a 12 week survey. But trusting it to mean anything is another story.

3 points of caution...

1) There's a time lag between introducing a new element on-air and when the audience's recognition of what's being broadcast (rather than what the station used to do) is reflected in Arbitron. Major changes of position (new format, line up or call letters) can take between 6 to 18 months to be recognized and reported in a way that parallels what emerges as the long term listening patterns.

2) What Arbitron allows media to publish are called "Top Line" numbers -- for the whole audience (12+) over the entire week (6a-12m, Mon - Sun), on commercial stations only. That's what you see online at All Access, Radio Digest or Radio & Records, or in local newspapers. While those 12+ numbers are generally regarded as a "beauty contest" and not very useful in selling commercial time to advertisers with more focused marketing plans, 12+ numbers are the most reliable (statistically speaking).

3) The reliability of numbers changes as dayparts narrow. What Arbitron produces are listening estimates based on sampling, so the numbers have more statistical validity when they represent a larger number of hours within dayparts with higher levels of total persons using radio.

Quoth IcemannyREMOVE-THIS@concentric.net in <nUVu4.63550$Cn1.1299337@news5.giganews.com>:
|As far as weekends Saturday Night Rocks 10pm-2am and Vin Scelsa's
|IDIOT'S DELIGHT Sunday 8pm-2am (or so) are staying.

Also, the horrendous 3AM infomercial that had been following Idiot's Delight is gone, and Ed Trunk (of Saturday Night Rocks) also follows Vin Scelsa, so Vin can once again go as long as he likes when he feels like going long, and has a kindred spirit to hang out with at the end of his show.

All in all, a major improvement.

(I didn't see this appear in the NG the first time I posted, so, I am
posting again just in case.)

This is an invitation to join the Voiceovers mailing list.

This is a list for people who work with their voice for
Voiceovers, Narrations, Commercials, Industrial Films,
Jingle Singing, etc, etc.

Even doing long-distance DJ voice trax....

TO JOIN THIS GROUP, simply choose ONE of these 2 options:

1) Send an email to the following address: voiceovers-subscribe@onelist.com

-OR-

2) Go to our site at
http://www.onelist.com/subscribe/Voiceovers
and click the "JOIN" button

If you do not wish to join the Voiceovers group, just ignore
this invitation.

Regards,

Moderator, Voiceovers

So, let me get this straight: It's OK to make fun of classical music fans...excuse me, fans of "Muzak for snobs" (music which was around centuries before you were even though of)...but making fun of the mentally ill is still taboo.

I have a wonderful idea: Next time your very favorite tune in the whole world is on, we'll arrange to interrupt it with a monthly test, and we'll make sure it runs about three minutes. See how you like it then. Apparently it's OK to interrupt any music *you* don't like.

Now wait just a minute here... Since when did you become qualified to judge someone's mental status? Just because people want to know when a tornado is heading smack dab for their house, does not make them mentally ill.

You know Ron, based on the things you have been saying about EAS, and radio in general, I'd suspect you've never been in the business. For example, your claim that radio thrives on and enjoys talking about traffic conditions is bogus B.S. We are here to inform the listener about the condition of the roadways so that they can avoid traffic jams.

If you find entertainment in watching people suffer in traffic accidents, you're sick. If you enjoy it when people flock to their radios during severe weather for life saving information, then you're a "mental jerk".

Unless you can factually back it up, don't give us anymore of this 17% vs 83% crapola. Until someone actually puts together a survey asking all listeners how they really feel about the EAS system, we will never know.

Finally, Ron, I hate to break this "obvious" news to you, but if you really are against the EAS, why don't you talk to someone in charge of it, as opposed to posting continous whiney messages to r.r.b. stating that you dislike it. Your anti-EAS posts to r.r.b. are literally a waste of bandwidth, and accomplish nothing.

The gimmick in unjustified fears is that the probabilities are all wrong.

It's not worth monitoring the radio to find out a tornado is going to
hit your house. It never happens.

The trick is to ignore the size of the population and report everything
as if it's right in the listener's own neighborhood, and then the kooks
are hooked on your station.

That's the anxiety audience.

I agree that some stations (particularly TV) get into
weather panic mode (I've worked for some), but lemme
get this straight.
If you were in Xenia, Ohio on April 3, 1974 (tornado
that that destroyed the town and killed many people,
part of a giant line of tornadoes that killed
hundreds)you would have preferred that none of the
radio or TV stations interrupted 10-in-a-row or the
afternoon movie to tell anyone about it? If you were
in Cincinnati last year when a tornado came through at
5:30am (killing 3) all of the stations should have
completely ignored it, and let people wonder why their
houses were blowing away?Just wondering.(By the way,
WLW and WGRR did a great job reporting on it).

This is important, an example of the mindset. You _don't get_
to pick the rare case to represent the whole population.
This is why you're getting the odds entirely wrong, and why
it appeals precisely to the anxiety audience and irritates
normal people.

The correct procedure is to go out _at random_ in the population,
after a _random_ storm that has received your concerned attentions,
not in particular to disaster victims but sort of a double blind
interview, and ask the people you randomly get what they thought
of the storm. They don't care and probably don't remember it.
It didn't damage them because it doesn't damage the overwhelming
bulk of the population. Yet you make this overwhelming bulk
listen to something they don't want to hear because they've
correctly figured the odds are zero.

My house has been standing in Ohio since 1973 and neither it
nor any house I personally know of has been damaged by a tornado.
You have to watch TV news to find any. TV seeks them out for you.

Tornados, can they happen here?? Tune in at seven.

The short form is that danger has to scale for population. The
population is huge. You're not scaling it but picking out the
isolated rare result as representative where normal people
see it as ridiculous.

Message-ID: <38BDEACD.E1C49FFB@nycap.rr.com>
Source record: 20719

Back in the late 70's TM Productions in Dallas distributed a commedy/demo package called "Tomorrow Radio". One of my @#*%^)*! bosses acquired my copy years ago, and I was wondering if anyone on the list has an old copy for sale or trade. It had bits on it referring to "K-9 Kid Powered Radio", and the "Greased Pig Contest". Looking back it seems that almost all the bits have become Fox TV Network specials! Thanx, Jeff (out of radio 14 years and still twitching)

Thinking that a tornado is likely to be heading smack dab for your house
is a very good sign of mental illness.

Where is the radio feature ``A Tornado Will Never Hit You?'' Now there's
some useful and uplifting weather information that is never given out.

Pandering all sorts of tragedies as entertainment one of the most repulsive
aspects of modern broadcasting.

A lot of people don't realize that broadcast grieving is entertainment, but it
apparently is. It's passed off as ``keeping you informed.'' It draws
huge audiences, all of whom consider themselves extremely sensitive.

They used to descend on families awaiting doomed airplanes; it was noticed
that the families suffered from this, and THAT BECAME THE NEW STORY, of how
they were being protected and whisked away from the media, so that you
can imagine their grief and wallow in it even better.

The ideas of ``none of your business'' and ``keeping you informed'' have not
found a happy medium yet.

``None of your business'' applies when it's a victim of tragedy, it seems to me.

That said, broadcasting is apparently fairly comfortable with the normal
level of carnage in the highways, and I think this attitude is right
and ought to apply to weather as well.

Ron Hardin <rhhardin@mindspring.com> wrote:

"The correct procedure is to go out _at random_ in the population, after a _random_ storm that has received your concerned attentions, not in particular to disaster victims but sort of a double blind interview, and ask the people you randomly get what they thought of the storm. They don't care and probably don't remember it."

Oh? In my experience, people in the general area of a severe storm *want* to know where it is going.

"Yet you make this overwhelming bulk listen to something they don't want to hear because they've correctly figured the odds are zero."

No, the odds are *not* zero. They are somewhat higher than that, and *during a storm* the odds are high enough to justify telling people what is going on.

"My house has been standing in Ohio since 1973 and neither it nor any house I personally know of has been damaged by a tornado. You have to watch TV news to find any. TV seeks them out for you."

I had a classmate in junior high school in 1974 whose home was destroyed in the storms on April 3 of that year. I know that it *can* and *does* happen.

Well, lessee. About 100 deaths a year, population 300,000,000, the odds are you'll
die in a tornado once every 3 million years. Watch out for ice ages!

869. Toledo Gospel addition.

Newsgroup: rec.radio.broadcasting
Date: 2000-03-02 00:00:00 UTC
From: dcoller@norden1.com
Message-ID: <89mtfa$80k$0@192.153.35.166>
Source record: 20725

On Friday 02-04-2000 at 10am and at Mott Public libary
in Toledo Ohio there is going to be a meeting mentioning
the reapearance of a local gospel station at a different
frequency on the Toledo dial. A new transmitter was
allready installed like the one Cornerstone Church
installed but with added protection and without mistakes
that a forced rush order from the manufacturer can create.
One known mistake was a miswired polarity reversal for audio.

Dave Coller

More later adter the press meeting.

Hope the others get on too like the bluegrass country
religion.

There is a problem with mds and all digital stuff that I tested is
colorizing of the audio. Here are two tests to do. The firstone is to
record a rasping of the highs us fm station with the tuner set at 50us
and second play a tape at double speed record it on digital then
record it back on the reel to reel unit and play it back at normal
speed and in the high speed test there will be much more colorization
than if two reel to reel units are used. With the fm played back the
rasp will be bad when played 5 seconds later. The fm played back will
sound mellower.

Is this alizizing distortion like the Sam's enrinchment books
mentioned. Also try to remove dithering noise and hear a distortion
worse than IM. Could not do that one.

As with everything, it's a matter of odds. The odds are you're not in
that position, with or without radio. The right odds are those for
a single home, because that's where the irritation and inconvenience
from the announcements go, multiplied up by the size of your audience.

The risk in traffic is 500 times higher. Nobody is shaking in terror
about that. The attitude of even hysterical radio towards traffic accidents
is a cheerful one. Tornados are five hundred times safer!

I notice your advertisers don't mind sending people on trips to stores.

> As an educational institution, why can't you just apply for a NCE-FM?
>>

I seriously doubt that any NCE frequencies are available in Worcester. That's why so many people are interested in LPFM. It's not that they really like the R&O as the FCC has presented it, but deserving institutions (like WPI) have not been given a broadcast voice, yet the "satillator" guys seem to be OK with the powers that be. It just doesn't seem fair, even if it is perfectly legal.

>Won't translator applications have priority if they are filed before the
>exact LPFM window dates are announced?>>

I don't think your dreaming, that's the way I read it. Look on the FCC Daily Digest to see how many translators have been "applied for." It's alarming.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

Hello. I found following old posting but its author is not at that address anymore:

Subject: Re: Experience with INSTANT REPLAY or DAT?
Date: 04/25/1995
Author: Ron Cole <rdcole@crl.com>

Use a harddrive based system or one of the Dennon or Sony Minidisk systems. I like hard drive systems and have been using them for over 5 years now with no - 0 - failuers. The almost instnat resonce and on some system you can play the spot as it's bing recorded if you need to...

Ron Cole

Anyone know what those hard drive (disk) based systems would be?
What is this "instant replay" mentioned in the subject line?
Is there a FAQ on these things?

Yours,

Juhana

360 Systems makes Instant Replay. Instant Replay is a harddrive
based, random access audio recorder, storage and retrival device.
It's completely self contained and VERY handy. I bought a version
1.1 when then first came out and used it every night when producing
a live broadcast at a night club in Chicago. Because I had miked the
building, including the dance floor, the delay inherent in ISDN
transmission made studio to site backfeeding impractical..we'd lose
the sync of the boots on the dance floor in time with the music...so
I produced the entire broadcast live on site. All the tunes came off
CD. But the production elements, liner beds (the liners, sweepers
and image pieces were all produced live on site), sweeper effects,
jingles, contest themes, game pieces and sound bites and effects all
went into the Instant Replay. That way I had one device to set up
and call into service, instead of dragging out 6 cart machines and a
carousel of AA-3's. The result was a VERY fast paced, VERY highly
produced wall of sound for 4 hours every Saturday night, with a live
host wandering the building on a cordless mic, calling up events
with a hand gesture. The programmable, random access functions of
the Instant Replay made abupt left turns in the show possible, and
brought a level of spontaneous organization to teh broadcast.

Many morning shows are now using Instant Replay at stations
throughout the world. Failure rate is astonishingly low. Capacity

of the drives is very high, and upto 1000 events can be stored, and reprogrammed in a heartbeat onto the "Hot Keys."

Much better, much more flexible, much more reliable, and depending on the record/playback algorithm used, much better audio than Mini Disc.

Ron, you befuddle me. Tornadoes have struck areas that
I've lived in, some with fatal results. I take it that
since the statistical probability of your house
burning down is very small, you don't have a smoke
alarm or have any use for knowing how to escape a
fire. That's fine, you certainly can listen to CD's
and only watch cable channels, then you'll pretty much
get away from all that hysterical chicken little
weather information.
As for me, I kind of don't mind if I have a heads-up
about severe weather, flash flooding, etc., even if it
interrupts the one millionth playing of "Freebird".
You'd think, if most people don't want weather
information that would be showing up in focus groups
with large numbers of people saying "for God's sake,
stop giving the weather!" (And, I also don't care why
I've been stuck on this interstate for an hour
standing still). I'm not aware of any research info
that indicates that.

We at Aachen 100,eins - die Hitgarantie (www.diehitgarantie.de) use the
Sony MZ-R30 for gathering actualities.
Advantages: - cheap price, long recording time (up to 158 Minutes), if you
are in a hurry you can pre-edit the actualities on the MD-device.
Disadvantages: - no manual recording level, the mic plugs are very "loose",
far away from being as robust as the Sony cassette tape recorders.

The fatal results are the result of a huge population, not
dangerous weather.

If the population were 100 times bigger, tornados would be
100 times more dangerous, according to you, because
100 times more people die.

But tornados are exactly as dangerous to you as they are with
a population of one in the world, which produces zero deaths.

You always have to scale for population to get risk to you.

I don't see why they can't build special radios like weather radios,
for warnings from the authorities, for those people who are into that. What's
choice all about? Why contaminate a perfectly good broadcast service.

I'd agree with all of the above - though you can set a manual
recording level on the Sony MD portables...you just can't adjust it
"on the fly" while recording.

I have a Sony MZ-R50 and recently obtained an R55 as a second MD
unit... it is *great*. I use the MD format extensively for on-scene
radio news gathering and I feel like it's my right arm!

"Crazy" Jay here!

Here is my playlist for this weekends show!
(replayed Monday Night if you miss it Saturday)

Hour 1:
Why Can't I / Chris Valenti
Mean To Me / Heywood Banks
Sing You Bastard / Rodney Carrington
Jerry Springer / "Weird Al" Yankovic
Male Order Bride / Mark Eddie

Standup Spotlight: Barry Martin
Archive Selection: The Pool Game / Chet & Charlie

Bonus Song: Candy Wrapper / Bird & Macdonald
Tikwan Leap/Boot To The Head / The Frantics

Hour 2:
Interview with Chris Valenti

Hour 3:
Interview with Wyatt Knight (Played Tommy Turner in all 3 Porky Films)

Hour 4
The Crazy 8 Countdown

8. Dancing With A Man / Rodney Carrington
7. Not So Supermodel / The Uninvited
6. Chamapge Chevy Nova / Mark Eddie
5. Does This Make Me Gay / Raymond & Scum
4. Should Of Been An Astronaut / The Uninvited
3. My Baby's In Love With Eddie Vedor / "Weird Al"
2. ATM / The Throwing Toasters
1. Two Words / Too Sick Chick

Hey, I came across a few old shows, after Dick Clark had left....these are with Bill St James and Charlie Tuna. I'd read that it was a competitor to AT40, but this sounds pretty AC-based, and these seem a little lame. I guess it was on the air for awhile, but was this a serious contender?

Counterpoint to off-topic subject: The mentally ill were around long
before classical music. (EBS tests, however, predate them all.)

>I have a wonderful idea: Next time your very favorite tune in the whole
>world is on, we'll arrange to interrupt it with a monthly test, and we'll

It isn't the tests that Ron objects to, it's the actual warnings of real
danger. Or as he would have it, overhyped impending doom.

I only listen to the station Ron does (WILL-FM) a few hours a week, but I
would be very surprised, no shocked, if they interrupt anything to run a test.

Tornados never hit houses? You mean only trailers?

I wasn't home at the time, but a tornado did strike my home. It pulled the porch roof off, spun it around and set it back down on the deck.

People are not monitoring the station for emergency broadcasts. People like that have scanners. People who don't want to hear about dangerous situations heading in their general direction should have cd players.

>The trick is to ignore the size of the population and report everything

You need to take the population size that crosses train tracks and number of deaths
to figure the odds. For all I know it's trivial too. You hear of so few,
and the news seems to like them. If there's no train I certainly do go around
them. Don't you?

My favorite horror is being killed by a stray dog, from which there are 2 deaths
annually (the other 10 killings by dogs are by family pets). This will happen
to your child once every 150 million years, in which time he will have also been hit by
three large asteroids. Mommies worry about the one and not the other, though
the playground-asteroid danger is three times bigger and is not reported.

News consists of getting the odds wrong. As the population grows, the news gets
more bizarre, because there's more stuff available to report on. The actual
dangers to an individual remain the same. This is somehow not understood,
and indeed may be what draws unstable individuals into radio broadcasting for all I know.

Tornados are a fine example.

No, tornados hit a given place rarely, so that you can ignore them and discover
yourself killed once every 3 million years. Actually the average toll may
be closer to 50 than 100, and that gives 6 million years, but who's counting.

To take over a perfectly good broadcasting service for hysteria without
the audience that wants to hear hysteria is my objection. They tuned
in to hear the Yankees.

There's nothing in the world that prevents the authorities from piggybacking
on the existing weather radios which remain silent until the authorities
are alarmed about something, except that nobody wants to hear it. Everybody
who wants one can easily get one.

Why do they not want one? Because it doesn't affect them.

>What is the maximum allowable power on US fm band?<

It depends on the class of station, and it also depends on antenna height
above average terrain:

Class A: 6 KW ERP/100 m
Class B1: 25 kW ERP/100 m
Class B: 50 kW ERP/150 m
Class C3: 25 kW ERP/100 m
Class C2: 50 kW ERP/150 m
Class C1: 100 kW ERP/299 m
Class C: 100 kW ERP/600 m

[47 CFR § 73.211(b)]

>What is the maximum allowable power on the NCE end of the fm band?<

The same as the rest of the band.

As a genre, the original version of classic rock should have done better.

After all, it was blessed with a simple, highly descriptive name - ideal for marketing. It was targeted right at the middle of a big generation. Its music had enduring mass appeal to the second half of the boomers, the ones who grew up on album rock in FM stereo instead of Motown singles on AM (as portrayed so well in "The Big Chill").

So what went wrong? It failed to meet expectations implicit in the name.

"Classic Rock that really rocks" is an attempt to correct two widespread criticisms of what was packaged as "classic rock" on the radio:

1) It wasn't classic.

2) It didn't rock.

WHAT'S A CLASSIC?

The Latin root "classicus" means of the highest class or first rank, while contemporary English definitions of "classic" (from WWWebster's online Dictionary) cluster around two concepts:

A) QUALITY: A standard of excellence; enduring, recognized value independent of temporary fashion; historically memorable; authoritative; authentic; exemplary.

B) TIME PERIOD: An era of highly developed culture, as in ancient Greece and Rome, or the Mayan civilization.

To rock listeners, classics are overwhelmingly a measure of quality; the kind of songs that won their loyalty to the genre, and so songs that are considered classic varies with the age of the respondent and when they were imprinted.

To the consultants and programmers that championed it, classic rock was a sub-set of songs from within a specific time period - by artists who made their first impressions between the Beatles' appearance on Ed Sullivan and John Lennon's death, 1964 - 1980. That meant the Stones, Clapton and Petty's later work would be added to the mix, but new artists would not be allowed to join the club. There could be new classic rock, but no new classic rockers.

WHAT IS ROCK?

Webster's definitions range from massive cliffs to slang for a gem.

The listeners' answers citing songs aren't nearly as cohesive, but what can be generalized is a desire for something more energetic than standard

AC-compatible CR, which often neglects its gems.

Encore anthems like "Won't Get Fooled Again," "Stairway to Heaven," and "Free Bird" are perennial chart toppers in Classic Rock listener polls, but they create problems for music scheduling software. A song with changes of tempo and density is hard to categorize. A song that's long is hard to fit in.

What results is a weird situation where "The Fish" from the "Fragile" album by Yes gets more exposure than their signature song "Roundabout" because it's shorter, and a tune like Fleetwood Mac's "Monday Morning" can appear as the most played song in the entire library simply because its the easiest to plug into play clocks.

93.1 WNAP, Indianapolis is a station that bills itself as Classic Rock that really rocks. Their web site lists AC/DC, Aerosmith, Guns n Roses, Kiss, Led Zeppelin, Metallica, Ozzy Osbourne, Pink Floyd, Rush, Van Halen & ZZ Top as artists that embody the concept.

While you'd find Aerosmith, Led Zeppelin, Pink Floyd and ZZ Top as part of the mix on a standard Classic Rock station, the metal parts of WNAP would be replaced by Fleetwood Mac, Steely Dan, Doobie Brothers and the Eagles... artists that AOR shared with Top 40 then and AC now.

That's problematic for a format based on exposing artists not available elsewhere, and which still tried to position itself as an alternative to the mainstream even after becoming a major force in shaping it.

Back in 1978, Ira Lipson (then PD at KZEW, Dallas) was quoted in "The Radio Format Conundrum," a book by Ed Routt:

"The number of artists who belong to AOR exclusively grows smaller each year," Lipson said, citing Steve Miller, Peter Frampton and Boz Scaggs as examples who had graduated to mainstream.

In most places, music centered on the mid 70's pre-dates their market's widespread acceptance of rock on FM by about 5 years. None of this happened in a vacuum. The gap between disco on Top 40 and hair bands on MTV was the window of opportunity. Lipson's comment happened right as AOR began to break through.

KMET became number 1 in LA in 1978, as did KISW in Seattle. Both had very strong personalities and a free-wheeling atmosphere more adventurous than most classic rock stations today.

WCOZ Boston hit double digits in 1981 with a "modal" hard rock mix when both WRKO & WVBF quit Top 40, leaving the low end for the picking.

KGB San Diego had similar good fortune in 1982, remaining as a 25-34 centered AOR after 91-X went new wave and KPRI became Hot AC KKLZ.

Right now the entire baby boom generation is concentrated within the 35-54 demographic.

===

In addition to the stations mentioned previously in the thread, youï¿½ll find ï¿½Classic Rock that really rocksï¿½ as a positioning phrase used on:
97.1 KXOK, St. Louis
104.3 WOCT, Baltimore
99.7 KYYS, Kansas City
99.7 WRFX, Charlotte
103.5 WIMZ, Knoxville
96.1 KZEL, Eugene, OR
103.3 WGLX, Wisconsin Rapids

Not to mention Ted Nugent's former home on the air - The Bear (WWBR 102.7) in Detroit, which said goodbye by playing "When The Music's Over" by The Doors when (mostly Urban) new owner Radio One took over in November 1999.

BRS Mediaï¿½s Web Radio 2000 site has a listing of 60 streaming classic rock sites, including some that do not originate as radio stations at
http://www.web-radio.fm/fr_classic_rock.html

MITï¿½s radio station finder combines Classic Rock with Classic Hits, listing 284 stations in North America with web sites (alphabetically by call letters) at
http://wmbr.mit.edu/cgi-bin/finder?format=clr&page=found

Radio & Recordï¿½s online directory lists 144 Classic Rock stations with web sites (alphabetically by market) at
http://www.rronline.com/Exclusives/Directory/cr%20sites.htm

Steve, you use your keyboard like a $20 wh---. :-)

When you see "Classics" though, the songs themselves are not neccesarily done from the "undergrounders" that made them popular origionally. "Cocaine" is an example, J.J.Cale's song didn't have massive airplay to begin with and what airplay it did get was whisked away when Eric Clapton released his version in 1978. The Clapton version is the one played, today.
Manfred Mann's 1977 Top 40 version "Blinded by the Light" as opposed to Springsteen's version. I found that a West Coast vs. East Coast difference. Then again it could have been a New York vs. the rest of the country as well. Somebody could correct me on this, but I don't think I ever heard Manfred Mann's version on WPLJ or WNEW from 1979 to 1983 (when 'PLJ went hybrid Top 40.) If I remember correctly WMMR, WYSP, and WLIR did play Manfred Mann's.

In your definitions, you may be flawed.
I'm likening this to the "Conservative" vs. "Liberal" philosophies in today's politics. The meanings of both are for all intents and purposes reversed but you wouldn't know it by the www.dictionary.com definitions.

When I hear a "Classic" in terms of music, it is a song that doesn't age. I liked it then, I like it now - and so does my son - and so does my father.

I have to agree with you on adding music past 1980. Was that the last year for the 70's or the first year of the 80's?
In any event, the term "New Classic" is somewhat oxymoronic in as much as EVERY song will burn after its initial popularity but what type of endurance cannot be measured upon immediate acceptance.

The music landscape is riddled with bodies from those battles.

I'm having a problem with the term "Alternative" for the same reasons. How, by it's very nature, can "Alternative" achieve high ratings before being considered "Mainstream"? If that occurs, is "Mainstream" then considered "Alternative"? I dealt with the possibilities of that question when I was at WHTG in the mid 80's. Although I was on the AM,

the FM used the slogan: "Your Rock Alternative." It was something I RARELY mentioned when I worked there. Whenever I did, the looks I got were those akin to an overloaded toaster.

At this point in my life, I mostly listen to the "Talk" stations. The music stations where I am, are mostly robotic with very little in the way of real personality and what personality is there on a station that still has them, the music is not striking that responsive chord. I am not compelled to hear what comes next.

Now, I know what "Jethro Tull" meant, "Too Old to Rock and Roll, Too Young to Die." Since I'm 43, I am part of the "aging boomers."

I still like to hear processor's go crazy during "Lucky Man" so I've still got life left.
:-)

>radio news gathering and I feel like it's my right arm!

I have had a MZ-R37 for less then a year.....a great unit!!!! for all
the advantages mentioned here. I might add that the main reason I
bought it was to lay down SFX in the field, for personal and
professional use....it works well with both pro and consumer mic
inputs and same goes, surpriingly enough, for line levels....don't
have to pad down the inputs from a XLR line feed...the built in ALC is
clean and works well..but you can also easily defeat it for manual
control....

while there may be arguements about comparisons to DAT, I can easily
use SFX I cut in a spot with no problems, and that's the main concern
for me......though I wish it had a digital out, I can live with
it....the analog output is pretty clean......MD as a broadcast field
format (newsgathering or otherwise) is pretty solid in my book.

Just out of curiosity, was Charlie Van Dyke working in the DC area in the mid-70s? I seem to recall a hiatus from classic DJ work to do radio news on one of the modest (not CBS, NBC, or ABC) networks?

TIA, Dave

>One could say that in this case, the NWS was preaching *only* to the choir. The congregation never got the message.<

I have found, at least in my area, that the NWS is having a tough time getting all the EAS technology integrated into their operations. On occasion the local NWS station sends out RWT's, but hardly on a regular schedule, and sometimes they would go months without sending one. OTOH, if there were local severe weather watches or warnings, we'd get them first from the area LP-1 or the AP wire, and not from NWS. I know they're trying, but apparently not succeeding.

909. Re: Please explain "Classic Rock That Really Rocks"

Newsgroup: rec.radio.broadcasting
Date: 2000-03-05 00:00:00 UTC
From: Steve Crowley <Steve@Crowley.net>
Message-ID: <DYnw4.90752$ox5.24155053@tw11.nn.bcandid.com>
Source record: 20665

In a reponse to my post asserting that this format variation -- Classic Rock That Really Rocks -- is designed to answer criticisms that 70's based Classic Rock radio isn't all that classic and doesn't rock, Jeffrey Adams (Jeff in Sa-ra-so-ta) raised the issue of cover songs in Classic Rock in message <38C1BE1E.12A093BF@home.com>...

>When you see "Classics" though, the songs themselves are not neccesarily done from the "undergrounders" that made them popular originally. "Cocaine" is an example, J.J.Cale's song didn't have massive airplay to begin with and what airplay it did get was whisked away when Eric Clapton released his version in 1978. The Clapton version is the one played, today.<

True, Jeff.

Pioneering free-form "Underground" or "Progressive" rock stations of earlier times might have been sticklers for a version by the original composer. But by the end of the 70's, FM rock had become a far more commercial animal, driven by its interpretation of Ries & Trout's "Positioning" marketing philosophy to "own" artists in the listeners minds, so that the mention of a performer would automatically trigger an association with an AOR station (see Ira Lipson's complaint about lack of exclusive association in my previous post).This is best illustrated by the fact that within consultant Lee Abrams' growing sphere of influence, the AOR format he packaged was then known as "Superstars," a term far better suited to Eric (then riding the wave of "Clapton is God" enthusiasm of those worshipping guitar heroes) than the laconic, publicity-shy J.J. Cale.

Even within the Clapton catalog things get whisked away. A decade after "Cocaine," another J.J. Cale song, "After Midnight" -- which appeared on EC's first solo album as a Delaney & Bonnie-style fast shuffle, was supplanted on the radio by the bluesier 1988 version from Clapton's "Crossroads" box-set (and Michelob beer ads).

4 years later, as the "Unplugged" phenomenon washed over us, Clapton re-made "Layla." Where 1970's version rocks, 1992's reflects. The anguish of a young man driven mad by his desire for Patti Boyd Harrison (possibly his 3rd great addiction after heroin and alcohol), had been replaced by an easy recollection of a passion long since cooled.

Certainly Clapton's entitled to change his once-troubled mind about how he wishes to portray the relationship 20 years later. And he appeared sincere. His rendition of "Tears In Heaven" on the same CD leaves no doubt that he was at peace with the far more recent pain of his son's death.

While Unplugged "Layla" & "Tears..." were recorded for MTV, the largest impact was to make EC more acceptable to AC and an audience cultivated by

VH-1. And on that level it worked. The CD scored seven million sales and multiple Grammies.

But what about Classic Rock radio?

In giving up the original Derek & The Dominoes Layla @ 7:07 for a (programmer-perceived) more demographically desireable Unplugged version (4:46 -- much easier to schedule in Selector) acceptable for Adult Contemporary, Classic Rock loosened its grip on a format-defining icon in favor of something shorter, softer, slower that wasn't classic and didn't rock.

The one song illustrates the whole perceptual problem.

Ah, no. It's been pretty well spread around that FCC databases, since the end of last year, are in the process of being reorganized, and during the process they are not to be trusted. The bogus listing for WMC-FM's main antenna is but one example. WMC-FM's horizontal ERP is the same as its vertical ERP.

> There is one notable exception, WMC-FM. Check out:

The current power limits were set when the currently-applicable FM
technical regulations were established in the early 1960s. Some
stations that were already on the air at the time were using higher
powers, and have been permitted to keep them. WMC-FM is an example.
(WBCT 93.7 and WOOD-FM 105.7 in Grand Rapids, Michigan are two other
good examples, as are just about every station in the Los Angeles market
and quite a few in the San Fransicso area, among others.)

WMC-FM is indeed authorized for 290KW. WBCT, at 320KW, is the most
powerful FM station currently authorized in North America.

The FCC databases are indeed screwed up, but WMC-FM is indeed licensed
for 290,000 watts horizontal ERP. (the comments file says
"Grandfathered @ 300KW and 277M HAAT", looks like they lost 10KW
somewhere<g>...) I'm pretty sure their vertical ERP is only 100KW but
couldn't tell you where I saw that.

914. Re: Please explain "Classic Rock That Really Rocks"

Newsgroup: rec.radio.broadcasting
Date: 2000-03-05 00:00:00 UTC
From: Steve Crowley <Steve@Crowley.net>
Message-ID: <OHqw4.91058$ox5.24202791@tw11.nn.bcandid.com>
Source record: 20670

In a response to my post asserting that this format variation -- Classic Rock That Really Rocks -- is designed to answer criticisms that 70's based Classic Rock radio isn't all that classic and doesn't rock, Jeffrey Adams (Jeff in Sa-ra-so-ta) talked about the issue of new music in the context of a Classic Rock station in message <38C1BE1E.12A093BF@home.com>...

>I have to agree with you on adding music past 1980.<

(The original Classic Rock focuses mostly on the 70's with the limits of acceptable artists achieving their initial fame within the years 1964-80, roughly the professional life of John Lennon in America)

>In any event, the term "New Classic" is somewhat oxymoronic in as much as EVERY song will burn after its initial popularity but what type of endurance (it will eventually prove to have) cannot be measured upon immediate acceptance.<

The whole question of forming "New Classics" could fill a book. Will any type of music after the Hot Hits era of 80's CHR have sufficient mass appeal and exposure to make a viable retro format? I don't think so.

But in the case of Classic Rock, the songs have been given such wide exposure over such a long time that for boomers they fill the role "pop standards" did with their parents. The recognition is so wide that it can even make an ad agency disregard the inherent irony of putting "Won't Get Fooled Again" into the soundtrack of a television commercial.

All stations that introduce new music do so on the basis of guesswork. The artist made a guess about which songs to record. The label takes a guess on what to make into a video or single. The local programmers take a guess on whether their listeners will think the other guys have guessed right. So even the most research driven radio station is getting feedback on whether it guessed well previously. And most times they don't; especially when decisions are made on the basis of politics and trying to second guess the audience.

In an article entitled "Let's See If They'll Play This," Salon Magazine's Dave Cullen recounted an incident at Gavin's annual Adult-Album-Alternative (aka Triple A or Progressive Adult -- read even more mellow than "classic rock") radio station summit in Boulder Colorado (Summer 1999):

<begin clip >>>
The rate-the-record session closing out the conference produced the first real controversy of the conference, as well as the greatest insight into the identity politics ruling contemporary American radio. A dozen upcoming releases were rated, based on two-minute snippets, spun without artist-identification. The industry audience voted on hand-held electronic

devices, rating each cut on a four-point scale from "No Chance" to "Chart Topping/Heavy Rotation."

The audience panned a clunky rockabilly retread and then howled when it was identified as a Paul McCartney song. Even though it earned the second-worst rating of the entire session, several panelists admitted that they'd be spinning it on the air very soon.

"I was going to rate it a two [light rotation], but when I realized it was McCartney, I gave it a [maximum] four," said Jason Parker, program director at Seattle's KMTT. "You've got to put it on."

That position provoked a flurry of debate. Which new artists would be forced off to accommodate the hoarse has-been?

"If the song sucks, the song sucks," said one disgusted audience member.

"It's a familiar voice; you want to give listeners something familiar," another panelist responded.

A few minutes later the room gave a resounding thumbs up to "Main Street," a derivative but catchy "Knockin' on Heaven's Door" knockoff. The song, the second-highest-rated cut of the session, was by Chris Gaines -- who is actually Garth Brooks behind a pseudonym and rock 'n' roll persona.

"Is this a problem?" a panelist asked. "If Garth Brooks had a really good song, would you play Garth Brooks?" The room was again divided.

"It does make me nervous," Parker admitted. "We're going to have to tell people this is Garth Brooks. How is our audience going to respond to us playing Garth Brooks?"

The answer? Don't expect to hear Brooks on your local Triple A station anytime soon.
<<< end clip>

So, let's get this straight... a bad song by a name you'd expect to hear associated with the station gets yanked from the toilet and propelled to the top, while a better song from a name you'd associate with some other format has no shot at all.

Garth Brooks was the only the best selling recording artist of the 90's. Does a 10 second mention of his name negate the favorable impact of 4:12 of what the programmers thought was a good song when it was anonymous?

Cullen got it right. While the example comes from a panel of experts in a genre that once publicly positioned itself as "quality rock," the same kind of judgement process is involved in every format more concerned that artists are perceived to fit, than that the songs could be hits.

In an atmosphere of narrowly defined turf and attempts to "own" artists, "identity politics" outweighs the question of whether any given song is good music. And by the time listeners are asked to vote at auditorium tests, people who have already indicated they approve are only asked to ratify

earlier guesswork born of fear and prejudice.

>What is the maximum allowable power on US fm band?

It depends.
Today the maximum power for newly or recently licensed stations in most of the country is 100 kW at maximum height of 2000 feet above average terrain, or equivalent. That's a "Class C." In the densely populated Northeast, it's 50 kW at 500 feet above average terrain, a "Class B" facility. Some frequencies across the country are limited to 6 kW at 328 feet...they are local-service "Class A" channels, with much shorter spacing between co-channel stations. Higher antennas are allowed for all classes but ERP has to be reduced accordingly.
The current rules on power date from 1962. Some earlier stations licensed between about 1946 and 1962 when the FM band was sparsely packed, are licensed to operate with powers over 100 kW, even in the Northeast. (I worked for one that has 110 kW ERP and a 1400 foot antenna, in Buffalo, NY.)

>What is the maximum allowable power on the NCE end of the fm band?

There's no difference between maximum operating powers below or above 91.9 mHz. There is one difference, though. The noncommercial frequencies are not subdivided for maximum power like the commercial frequencies at 92.1 and above, so you get a mix of Class A (max power 6 kW), Class B (max power 50 kW) and Class C (max power 100 kW) stations on each channel from 88.1 to 91.9.
Like the commercial channels, however, Class C stations on the aren't licensed on the NCE band to the Northeast where the maximum facilities licensed since 1962 have been Class B stations.

Since the adoption of Docket 80-90, you have the same scenario on the
commercial band. Prior to that, there were 20 "Class A" channels. The rest
were Class C (or B, depending on the zone).

Anyone who seriously believes that only "hysterics" want to know if a tornado is headed there way, and that radio and TV should ignore severe weather, is either clueless or arrogant, or both.

Of course, it's much more likely that you know what you are saying is silly; you're only saying this stuff to "stir things up" and get noticed. Fine. Troll away, fool.

You are not in that position, though. If a safe were about to fall on you
you'd want to know about it, but it's not very likely that a safe is about
to fall on you so it's not worth having falling-safe detectors.

The broadcast trick is to claim in effect that falling safes are a major problem,
and that's hysterics.

And let's add that he's also doing (via voice track) the 9am-noon shift on the syndicated Music of Your Life.

That equals morning drive for MOYL's West Coast stations. He uses much of the material (even phone calls) from his KLAC show for MOYL.

By the way, all of MOYL's shifts are voice tracked. It's a satellite service where no one is ever live.

Doug,
I am surprised not to see WAXX-FM on the Overpowered FM list. At 98kW at 1800' I thought they would have made the cut.

I assume WAXX-FM didn't make the list because it is just an ordinary class
C station, fully conforming with the current regulations. It's just too
far to the north and west.

936. Salem Communications Acquires Eight Top Market Radio Stations; Adds 4 FMs & 4 A

Newsgroup: rec.radio.broadcasting
Date: 2000-03-07 00:00:00 UTC
From: Greg M <g60m@neo.rr.com>
Message-ID: <002701bf887e$5c7b3b20$8da65d18@neo.lrun.com>
Source record: 20601

CLEAR-CHANNEL COMMUNICATIONS DIVESTS 72 AM/FM STATIONS -- SELLS 8 TO SALEM COMMUNICATIONS

==========

Salem Communications Acquires Eight Top Market Radio Stations
Adds 4 FMs & 4 AMs in LA, Dallas, Denver, Cleveland & Cincinnati

==========

PR NEWSWIRE

CAMARILLO, Calif., March 6 • Salem Communications Corporation (Nasdaq:SALM), the leading provider of Christian-oriented radio, electronic and printed resources, announced today that it has signed a definitive agreement with Clear Channel Communications (NYSE:CCU) to acquire radio stations KEZY(AM) and KXMX(FM) in Los Angeles, California; KDGE(FM) in Dallas, Texas; KALC(FM) in Denver, Colorado; WKNR(AM) and WRMR(AM) in Cleveland, Ohio; and WBOB(AM) and WYGY(FM) in Cincinnati, Ohio.

Salem will pay $185.6 million in cash for the stations. The acquisitions are subject to regulatory approval and consummation of a planned merger between Clear Channel and AMFM, Inc. (NYSE:AFM).

Edward G. Atsinger III, Salem's Chief Executive Officer, commented, "We couldn't be more pleased with these acquisitions. We are always looking for opportunistic ways in which to enhance the growth of the company and believe that no greater opportunity to acquire radio stations of this caliber may present itself this decade. These radio stations are tremendous broadcast facilities that complement our existing operations and strengthen our strategic position in the radio industry."

Atsinger continued, "Certain of these stations will allow us to enhance our existing Religious Talk stations within the market with music and general market talk formats, providing us with programming synergies and the direct benefits of the economies of scale that consolidation allows. With at least one radio station in 21 of the nation's top 25 markets, we are clearly the 'must buy' for reaching our audience -- a loyal and fast-growing group. Furthermore, eight additional radio stations will drive growth in Salem's rep company, radio network, on-line media assets and print publications, putting us in an excellent position to benefit our listeners and customers and increase shareholder value over the long-term."

Salem Communications Corporations is headquartered in Camarillo, California. Upon the close of all announced transactions, the company will

own and/or operate 70 radio stations, including 52 stations in the top 25 markets. In addition to its radio properties, Salem owns the Salem Radio Network, which syndicates talk programming, news and music to more than 1,300 affiliated radio stations throughout the United States; OnePlace, Ltd., a technology company which operates the Christian web portal OnePlace.com; and CCM Communications, the leading publisher of contemporary Christian music trade and consumer publications.

Statements used in this press release that relate to future plans, events, financial results, prospects or performance are forward-looking statements as defined under the Private Securities Litigation Reform Act of 1995. Actual results may differ materially from those anticipated as a result of certain risks and uncertainties, including but not limited to, competition in the radio broadcast industry and from new media technologies, adverse economic conditions, and other risks and uncertainties detailed from time to time in Salem's periodic reports on Forms 10-K, 10-Q and 8-K filed with the Securities and Exchange Commission. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. Nope. Charlie's decade of the 70s took him from KFRC, San Francisco to CKLW, Detroit to KGB, San Diego to KHJ, Los Angeles to WLS, Chicago...back to KHJ, then to KLIF in Dallas and then...and this may be what you're thinking of....to WRKO, Boston, where he, as program director, flipped the station from Top 40 to News/Talk. But, unless there was an odd fill-in...Charlie did talk, not news.

From: Art Chimes <achimes@prodigy.net>
Message-ID: <38C5A739.86124E25@prodigy.net>
Source record: 20607

I used MD (Sony R-30) extensively in 18 months across central and eastern Europe, including Bosnia and Kosovo (not during wartime, however). I'd say surprisingly robust for a frankly flimsy-looking consumer unit. Miniplut inputs do not stand up to a lot of abuse, but with modest respect they do fine. When I bought one for myself, however, I got the Aiwa AM-F70 for three reasons:

(1) allows riding gain on the fly, unlike Sony models which allow manual recording levels be set only in pause mode

(2) no necessity for pressing an "end search" button, which is an enduring and annoying feature of all the portable Sony models, and no one who has used one of these Sonys for any period of time hasn't mistakenly erased something. Plain bad design, Sony. The Aiwa, and some (most?) other brands defaults to begin a new recording on the next available blank spot on the disc.

(3) The Aiwa portable (and others?) has a so-called rehearsal mode for editing, so you can preview a new track division before actually making the edit. Great for field production.

Cautionary note on any consumer MD equipment: you can't use them alone to feed sound down a phone line like you can with cassette machines like the popular Sony 5000. You need an additional amp of some sort.

Great explanation of the whole debacle, Mark! I'm seeing more and more of this sort of thing, now. One point, though. Don't you think the North Bay cables will have no choice but to "find room" for the "market's" NBC affiliate? It seems almost impossible to believe that the SF system wouldn't have to, too.

Again, a very clear and informative description.

We interrupt our regular programming at XXXX to activate the Emergency Alert System. Important information will follow...

Chirp... chirp... chirp... beeeeeeeeeeeepppp

We interrupt our regular programming to activate the Emergency Alert System to inform Ron Hardin that the sky is falling.

...Seriously though, it's times like these I miss the moderation of r.r.b., so we wouldn't have to read ignorant messages from people like Ron... He might be knowledgeable about some things, but his feelings about EAS are way off to the left...

I agree that EAS tests are an annoyance, but real EAS bulletins have merit and belong on the radio, especially when it's a life or death situation.

Ron will argue this (as we have seen) no matter what anyone says, but his anti-EAS opinions are far from the norm. I never took what he said very seriously to begin with (in fact I've had a few good laughs over some of his comments).

Ron says that EAS alerts are "the anxiety format", and for him it may very well be. The only anxiety I have ever seen that was anywhere near related to EAS, is new board-ops learning how to operate it.

As for myself, I have one of those NWS radios that Ron spoke of, and I also have color radar to track the storms. But I still keep my radio on during severe weather just in case I miss the alert when the NWS sent it (which has haooened!).

Unlike Ron, I do care if a tornado is even remotely heading my way. I don't care what the chances are of it striking my house, no matter how odd they might be. What I do care about is my personal safety, and if there is even the slightest remote possibility that a tornado is coming to my city, I want to know about it so I can be prepared to take shelter if necessary.

Ron can argue all he wants that this will never happen to me, or that the chance of it happening is a million to one. He can also call me an anxious person all he wants. I don't care what he thinks. I care what "I" think, and what I think is that it is better to be safe, than sorry.

I'll Bet Ron doesn't know (and doesn't care) that a tornado came through my area in 1984 and damaged the transmission tower of the station I work for. What if it was next door to Ron's house? What if it fell on Ron's house?

Ron only wants to play the game of chance with numbers. Ron only wants to point at us and laugh and call us anxious or mentally ill. He doesn't give squat about anything else. As far as I am concerned, Ron can rot in hell.

A recent study says that 17% of the population needs something to worry about.
If there's nothing real, something will be made up. What's constant with
this group is the anxiety level.

I remember asking if this is something we ought to be worrying about.

The only thing I am anxious about is your lame-duck responses to these EAS posts. But then again they've become so common, it's almost losing the anxiety level.

Message-ID: <006101bf8838$f2728200$502d153f@mmkc>
Source record: 20696

National Music Survey was, in my opinon, the poor mans (or in this case) the poor stations version of AT40. Alot of smaller market stations (at least the ones I've worked at) ran NMS in order to have a bigger market sound.

It was neat spinning the records and hearing the great voice of Charlie Tuna. Somewhere around here I have a few of the 33's that the show came in on. If you have the discs - you might want to hold on to them - I think they'd make great collectors items.

Source record: 20697

Perhaps we should start this thread again from the top, by remembering WHY EAS was developed, in the first place.

It was put in place to allow the President of the United States to address everybody tuned into a radio, TV or cable system in the event of a national emergency, with no action required by any station or cable company employee.

The fact that it can be used by local jurisdictions to disseminate emergency information is all gravy.

If the LP-1 screws-up a test, it indicates the need for training. THAT"S WHY WE TEST!

If the LP-1 screws-up a local alert, it also indicates a need for training.

These are all things that need to be brought to the attention of the local and state committees. It doesn't indicate a basic flaw in the system.

Tim

950. What Happened to Orange County Book?

Newsgroup: rec.radio.broadcasting
Date: 2000-03-07 00:00:00 UTC
From: steve1reg@aol.com
Message-ID: <20000307153216.11777.00000016@ng-ci1.aol.com>
Source record: 20698

Orange County California used to have its own ratings book. It was interesting to compare this more suburban bedroom county to LA, even though it was ranked in the national top 25 markets. Long Island still has its own book, even though it's part of the NYC market. LI ranks #14 nationally.

When Orange County still had a book it would usually show a more suburban taste in music. Even though KOST was often LA's #1 music station, for some reason KBIG often beat KOST in Orange Co. KROQ always was bigger in Orange Co. for all those suburban modern rock listeners. And KIIS, along with Rick Dees, pulled better numbers in Orange Co.

Back in the days when Orange County stations KWIZ-AM and FM, KNAC and KEZY-AM were still English language, they often gave the LA stations a run for their money.

Now that they're ethnic broadcasters and Orange County is nearly as built up as LA, maybe there's no more need for a separate book.

From 'Greg Modzelewski':

>CLEAR-CHANNEL COMMUNICATIONS DIVESTS 72 AM/FM STATIONS -- SELLS 8 TO SALEM
>COMMUNICATIONS

>WKNR(AM) and WRMR(AM) in Cleveland, Ohio

WOOHOO! MORE RELIGIOUS BROADCASTING IN CLEVELAND! YAY!

:P

The only good thing about Salem acquiring more stations in Cleveland is that I have a friend who works at their original Cleveland acquisition (WHK 1420) and this may mean either more work or better job security for him.

I hope they don't flip 'KNR and 'RMR to religious; there's enough satellite-fed Godspeak on the air in this neck of the woods already. (There... have I offended enough RRB/Airwaves subscribers yet? :P)

The news release I saw said something about broadening their program
offerings. Maybe they've seen Crawford running nostalgia AM stations and
think it's a good idea.

In any case you have WKHR which is sorta "WRMR without commercials",
only better, IMO. Sure wich I could hear them.

I'm with you on this one - there's more then enough Godspeak [as you put it] ANYWHERE on the dial - between the rantings on 880 and 1000 out of central Ohio we have a bit of Right To Life cr*p now and again on 1330 WELW Willoughby, plus full-time feel-good "All Jesus All The Time" Christianity on 103.3 and I think 98.1, wastes of good frequencies (tho what to replace them with is anyone's guess)

A friend of mine was the music director for the short-lived WMIH 1260 (former pop powerhouse WIXY, now Radio Disney, no idea what call they're using now) - which according to him was the only commercial *Catholic* station in the country - not "Christian" per se but strictly Catholic. Heavy on Bishop Anthony Pilla and lots of people reciting Vespers in unison (like the cable channels I have to program out of my TV every time we lose power).

Among the stories he related to me [he's director of music & liturgy at a church in Cleveland and has masters in music and theology, FWIW] was that they had a sign in the air studio reminding any on-air people that "CATH-O-LIC" is a THREE-syllable word.

He had a program called "Evening Manna", in which he'd play music by contemporary sacred *and secular* artists that he felt still contained the appropriate message, particularly for the young'uns (i.e. some Van Morrison tune that escapes me, and definitely more rap and metal-oriented stuff but with heavy Christian/Catholic messages).

Uproar! Oust the heathen! Forget that he was being evangelical in his own way over the air, the anal die-hard Cath-o-lics in the Cleveland area called the Bishop (whom my friend evidently is on good personal terms with) etc. etc. etc. So anyway he was fired after a while, and what happens? In short order they get bought up by the Mouse....

This will be interesting. 30 or 35 presets on my car radio and not much worthwhile to program in!

I'd like to complain about the religions show on WILE 1270 in
Cambridge OH at 9am. The guy speaks very slowly with long
pauses, which makes it almost impossible to null out the station
for a clear shot at WXYT 1270 in Detroit. You go right through
the null in one of his pauses and don't spot it. He seems unnullable,
jabbering on no matter what you do.

When the organ music comes on you can at last get rid of him.

I have a 4 element phased array, nulling out WUCO 1270 Marysville OH
with each of the SW-SE and NW-NE pairs, and then nulling out
WILE 1270 by combining these pairs, leaving (usually) WXYT 1270 Detroit
and its Imus, plus this guy jabbering until I find the null, and
sometimes WMKT 1270 in Charlevoix MI on a bad day.

Maybe Infinity will move Imus closer to Columbus for me.

Sorry, looks like Salem will more likely flip WKNR & WRMR formats to Religious, because all of the stations the own or Religious. I'm a little shocked they bought KDGE (The Edge) in Dallas. I'm sure you heard that Sunburst Media (Which owns Contemporary Christian KLTY) is selling all of their properties to Cumulus Media, and rumor has it that Cumulus is going to spin off KLTY. Salem should go ahead and buy KLTY and leave KDGE alone and sale that to someone else. But Oh well, that will never happen. I wonder what's going to happen when KDGE flips to some sort of Religious music format, what will KLTY do? Will they pick up the KLTY call letters and format? Will See.

HI-HO, HI-HO, It's off to Kulpsville I go. Kulpsville, PA that is, for the 13th annual Shortwave Listeners Winter Festival. We'll be doing a remote broadcast from there at our usual time on Saturday night, 8PM eastern/0100 UTC Sunday on WBCQ/7415.

The show will not be live but actually recorded over 2 days and edited and fed to the station at an earlier time that afternoon. It will not be available on our live365.com feed until sometime on Monday night. In the interim we will continue repeating last week's program, the Forgotten Females show.

As for our website, we've put up a few new links over the last few days. Our Oldie Of The Week has been updated. This week an early stereo mix of Stardust by Billy Ward & The Dominoes. Check our webpage for something we found very interesting with this mix. It is the original version that was released on the 45, but was THAT the original?

I've had some comments as to my offer to make copies of our shows available on CD and CD-ROM. As soon as all the work we have to do for the SWL Winterfest is over, I'll make my decision as to the final prices for them and I'll set up a web page with the ordering information.

Back on Monday.

Updated Jan 4, 2000

Subject: Southern California Radio and TV Page

You can visit my Southern California Radio and TV Page at...
http://www.geocities.com/TelevisionCity/Station/2700/indexrad.htm

or

http://www.davesfunstuff.com/radio

Now with links to related news sites, as well as links to 13 messageboards!

I'm also accepting news bits to post in my Radio/TV news section.

NEW! Radio Station Logos section!

Also included: a list of HDTV stations, plus a list of stations
broadcasting in Spanish for all of Southern California and Northern Baja.

Radio programs in the station listings.

Links to all the local area radio and TV stations that I know of, and noted
which ones are in Real Audio

DX catches in the So. Cal area plus all the DX stations in North Americal.

Digital TV Channel assignments to the local area stations.

Frequency lists of the TV and cable sounds for those with scanners and
pocket VHF radios.

Expanded local AM and FM radio talk show listings. Formerly restricted to
morning drive shows, but this comes in handy since shows keep getting shuffled
around and times switch. Always accepting updates to the program guide.

The addition of four pages from the FCC database, reeditied into the local
AM, local FM, local TV and nighttime AM DX-ing radio stations. I wrote a
QBASIC program to compile the huge tables, but I changed no fact from the
databases, as they contain errors, especially with the Mexican stations and
owners. I should be updating this soon.
I still have my own four pages of AM, FM, TV and DX pages I composed with
formats and updated and corrected calls that I came across.

Some recent radio news of note on the front page.

good luck

david tanny

Hello,
I've added some new free radio pages at my site.
The inter-links do not work perfectly yet so here are all the appropriate
links, for a sneak preview:

http://www.freeyellow.com/members7/gearloose/free.htm Intro.
http://www.freeyellow.com/members7/gearloose/part15.htm Part15 onfo.
http://www.freeyellow.com/members7/gearloose/start.htm For beginners.

Regards
Christos Konstas

Perhaps this is in the plans. Could be very adventageous for them to own two
adjacent frequencies...especially on an over-crowded radio dial like
Dallas/Fort Worth's.

I have settled on buying SONY domestic MiniDisk units ahead of Denon and all the other "professional" models.

We have been using MD for on air replay of music and news/programme material for 3 years. Stopped the CD's going missing! No problem cueing reels.

we use MD daily for recording and editing news, commercials and talk programmes. We travel MD to record Church OB's [Yep still doing the Sunday service] Quality is GREAT Reliability is EXCELLENT. Cost OK too.

Plus we direct dump into AudioVault via a SPIDF/AES EBU Box for direct digital from source to air.

Sony's domestic mechanism lasts longer and our people are not gentle! we wore out one JOG control on 4 Sonys. and they cost $400 US retail each. The denon's cost over $1000 us and one lasted one day! Never been right since. No parts support. Our engineers had problems all the way.

The oldest Sony shows signs of wear. 24/7 use in the on air wears off the labelling. Mechanism is still fine.

Have seen some people using pocket sony MD for ENG. They seem to be happy.

Only problem now is too many people have MD at home!

Well then my proposal that Salem buy the intellectual property of KLTY on that sorry 100.7 signal and put it back on 94.9 where the station started in the mid 80's. If the Cumulus thing is true Salem might not having any problem buying the KLTY brand and putting it on the better 94.9 signal and throwing the low rated talk onto 94.5 and go mono so that helps the range. I dont know if Salem should also buy 100.7 or not but If Salem gets the KLTY brand then it has the best chance of surving plus it can get their normal ratings again with a better signal and in turn make Salem more money.

I've worked with Scott, RCS and Audiovault. Audiovault seems to be the most user and management friendly. In fact, it's become the standard Digital Audio Management system for BBC. However the Workstations come with Win 95/98 installed, and crashes are---I know, here's a surprise,---frequent. I had considerable good luck removing the commercial Win95/98 with it's bundled BS, and relacing it with NT. Cleaned up the snags right off.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

974. San Diego's 103.7's Future Format?

Newsgroup: rec.radio.broadcasting
Date: 2000-03-10 00:00:00 UTC
From: davidtan@cts.com
Message-ID: <38caa099.9575290@nntp.cts.com>
Source record: 20630

San Diego's 103.7's Future Format?

Would KPLN 103.7 be a prime target for an all-rock talk format in San Diego? Now that Infinity is coming to San Diego, they might want to do a hybrid rock and roll/rock talk format aimed at males 25-54, the similar way they programmed KLSX 97.1 out of Los Angeles in its early days. They might want their hot property Howard Stern (Clear Channel's 105.3 is an affilliate, but Infinity owns the program and the contract will be up in the future) to move over to 103.7 to start their broadcast day off, along with the possibility of bringing back top-rated afternoon athiest yakker Tom Leykis, as well as adding more talkers, possibly beaming some of KLSX's talkers down to San Diego's 103.7 in the same way Clear Channel beams KIIS-FM across three radio stations in the upper desert area eastward towards Las Vegas.

Clear Channel selling off 16 more radio stations

This Just In Before Press Time...

Clear Channel Communications, Inc., already in the process of divesting itself of 125 radio stations to satisfy FCC rules in order to gain approval with AMFM Inc., has announced Thursday that it will sell an additional 16 radio stations.

The announcement came three days after the company announced agreements to sell off 72 stations.

Clear Channel said it will announce the remaining required divestitures in the near future.

Definitively, Clear Channel will be selling radio properties in San Francisco, Des Moines, Iowa and five smaller markets to be announced.

Some of the radio buyers named include Barnstable Broadcasting, Inc., Inner City Broadcasting Corp., Rodriguez Communications, Inc. and Saga Communications, Inc., all of which would enjoy getting radio stations in some of the bigger radio markets.

Clear Channel operates 874 radio and 19 television stations in the United States and has equity interests in over 240 radio stations internationally.

Last October, it agreed to buy AMFM, a radio programming distributer that also operates hundreds of stations, in a stock deal worth $16.6 billion at the time. And last week it said it will spend $4.4 billion to acquire sports and entertainment promoter SFX Entertainment Inc.

Source record: 20634

Hello Everyone,

Rock-it Radio show #147 is out and about at our archives page at
http://www.palmsradio.com/rockittext.htm
It's featuring Lane Quigley and the Memory Lane show with his ever popular feature on Forgotten Top 20's. Here is the description and list of songs.

The late 50's and early 60's were a wonderous time for Top 40 Radio. Rock & Roll and R&B co-existed beside pop, country, doo-wop, folk, blues, teenage idols, jazz, movie and showtunes .... great music from all different musical genres.

By popular request, host Lane Quigley's MEMORY LANE SHOW takes another journey to the land of Forgotten Top Twenties -- great songs that made the upper echelon of the American music charts in the fifties and early sixties but are totally overlooked by today's radio programmers. You may not recognize all of these titles, but once you hear these songs, we think they will trigger some great nostalgic memories.

Here's the playlist for Forgotten Top Twenties #6:

1. Bony Maronie - Larry Williams [#14 - 1957]
2. A Walkin' Miracle - The Essex [#12 - 1963]
3. Little Boy Sad - Johnny Burnette [#17 - 1961]
4. Poor Boy - The Royaltones [#17 - 1958]
5. Oh Oh I'm Falling In Love Again - Jimmie Rodgers [#7 - 1958]
6. I Feel So Bad - Elvis Presley [#5 - 1961]
7. James (Hold The Ladder Steady) - Sue Thompson [#17 - 1962]
8. You Can Have Her - Roy Hamilton [#12 - 1961]
9. Baby Talk - Jan & Dean [#10 - 1959]
10. Always - Sammy Turner [[#19 - 1959]
11. Donna The Prima Donna - Dion DiMucci [#6 - 1963]
12. Jo Ann - The Playmates [#19 -1958]
13. Say Man - Bo Diddley [#20 - 1959]
14. Stay - The Four Seasons [#16 - 1964]
15. Everybody Loves a Lover - The Shirelles [#19 - 1963]
16. That's Old Fashioned - The Everly Brothers [#9 - 1962]
17. Cool Shake - The Dell Vikings [#12 - 1957]
18. Slow Walk - Sil Austin [#17 - 1956]
19. Lotta Lovin' - Gene Vincent [#13 - 1957]
20. It's Up To You - Rick Nelson [#6 - 1963]
21. Josephine - Bill Black's Combo [#18 - 1960]
22. My Girl Josephine - Fats Domino [#14 - 1960]
23. First Name Initial - Annette [#20 - 1959]
24. How The Time Flies - Jerry Wallace [#11 - 1958]
25. Wheels - The String-a-Longs [#3 - 1961]

26. Till Then - The Classics [#20 - 1963]
27. Lonely Blue Boy - Conway Twitty [#6 - 1960]
28. Please Don't Ask About Barbara - Bobby Vee [#15 - 1962]
29. Alone - The Shepherd Sisters [#18 - 1957]
30. I Will - Dean Martin [#10 - 1965]
31. Sacred - The Castells [#20 - 1961]

To tune in just go to our archives page at:
http://www.palmsradio.com/rockittext.htm and click to show #147.

~~~~~~

Iditarod Dog Sled Coverage on Rock-it Sister Station.

Just a reminder that our sister station is in full operation and covering
the Iditarod Dog Sled race from Anchorage to Nome. All
1,049 miles. If you would like to learn more about this event or
First Nations Broadcasting from beautiful enchanting non tropical
Uganik, Alaska. Or if you are in the mood to listen to Native Alaskan and
American Music ... on the Airos network you can tune
them in at:

News on Rockabilly Fest 2000

PRESS RELEASE
For Immediate Release * February 29, 2000

"World's Largest Gathering Of Rockabilly History Makers"
Brenda Lee Added To Rockabilly Fest 2000 Activities

[Nashville, February 29, 2000] - The largest gathering ever of Rockabilly
history makers will take place in Jackson, Tennessee on April 14-16 as
Rockabilly Fest 2000 kicks off its inaugural event. The weekend will
feature entertainment from some of the original pioneers of rockabilly
music as well as many of the newer acts including several international

artists. There will be more than 30 hours of live entertainment; a reunion of many of the industry veterans, singers and musicians who created the music; an
opportunity for fans to meet and talk with these history makers; and a number of related nostalgic events. Brenda Lee is newest addition to the lineup of rockabilly stars attending (a list of attendees follows this release).
Jackson is the future home for the International Rockabilly Hall Of Fame and Museum and proceeds from this event will go toward building the shrine.
"The response thusfar has been incredible," says Henry Harrison, a Jackson businessman who is the brainchild of the project. "We have artists like Wanda Jackson, Brenda Lee, The Jordanaires, Narvel Felts, Buddy Holly's original Crickets, Marshall Lytle, one of the original Comets, Billy Lee Riley, and the list goes on and on. I wouldn't be surprised to see Paul McCartney or one of the big name rock artists show up. They all love and respect rockabilly music and the musicians so much."
Rockabilly is the term used to describe the unique combination of early rock and roll and hillbilly music which became popular in the early 50s thanks to acts like Buddy Holly, Elvis Presley, Bill Haley and Carl Perkins, who is a native of Jackson and probably best known for penning the rockabilly hit, "Blue Suede Shoes."
Harrison says he expects a stellar turnout for the April weekend festivities. "We are seeing a resurgence of interest in rockabilly music all around the world, and we will be offering an opportunity for the public to see history in the making. Some of the people we have participating were there when this music was born so it will truly be a historic event."
Long time Johnny Cash band members, drummer W. S. Holland and bassist Dave Rowe, will be the nucleus of a staff band which will be on hand to back artists performing without their own groups. Holland will also coordinate the band backing an All Star Jam Session on Sunday, April 16 at 4 PM.
An initial list of candidates for induction into the International Rockabilly Hall of Fame will be released shortly. A panel of rockabilly artists and notables will select the inductees.
Tickets for the three-day weekend are $35 plus $5.24 S&H. For ticket information use information below:

The Latest Polls

Well as you may or may not know Rock-it Radio has a poll out on
it's main website at http://www.rockitradio.net that asks it's listeners
which musical preference do they prefer to listen to on Rock-it Radio.
With 275 votes in here is the latest standings.

1950's Rockabilly 105 votes 38%
DooWop Groups 104 votes 38%
Rockabilly today 66 votes 24%

If you haven't voted yet you can and let your voice be known as to the
style you prefer to hear on Rock-it Radio. Just go to our main website
and scroll down to where you see "opinion poll" then click and vote.
~~~~~~
Rock-it Radio listeners club has grown to 590! If you would like to join
it's simple and free and keeps

you aware of what's happening on Rock-it Radio. To get into the listeners club just simply click to our main
webpage at http://www.rockitradio.net and towards the top of the page there is a space to enter your
e mail address -- type it in - click the red and white "listbot" button and follow the instructions. There is
no obligation and you can unsubscribe at anytime.
~~~~~~
Check out all the stuff you can listen to on the internet!!! almost 8000 Radio stations Worldwide!!!
we have a list of directories etc. that will keep you busy for a long long time!!! At
http://www.palmsradio.com/radiolinks.html
~~~~~~

That's about it for this time!!!

Thank you all for your support and remember
we try hard to keep those requests and dedications
filled.... so, if you have a request, dedication, or
comment or news item that you would like to submit

981. Radio Netherlands webcast

Newsgroup: rec.radio.broadcasting
Date: 2000-03-10 00:00:00 UTC
From: Jonathan Marks <Jonathan.Marks@inter.NL.net>
Message-ID: <NCBBJHHLBLIEMMJKGKNMEEBICKAA.jonathan.marks@inter.NL.net>
Source record: 20637

Hi there from Europe,

Incase you haven't heard Radio Netherlands is firing up the www server at
14-16 UTC tomorrow, Saturday March 11th to throw
the mike's open to Media Network contributors and the rest of the world.
More details are at
http://www.rnw.nl/realradio/html/webcast.html . Media Network is a weekly
show about broadcasting on Radio Netherlands, a
public radio station in Holland.

We're interested to know what kind of radio you'll be using in the next 5
years and whether you think people in your part
of the globe will still be interested in foreign affairs. On the one hand
there is more information, on the
other, some of it is getting harder to find. Will mergers mean just a couple
of news sources dominate completely?

Have your say....

Lines are open at 13 UTC. Call and leave your number. We will try and call
back as many people as possible.

The number +31 35 6724222

e-mail: media@rnw.nl

Thanks for taking part,

Jonathan Marks & Diana Janssen
Radio Netherlands

Newsgroup: rec.radio.broadcasting
Date: 2000-03-10 00:00:00 UTC
From: Music Communication Company <mccteam@springmail.com>
Message-ID: <vhiics4na30tq9am1p0t7pum58itlktjuv@4ax.com>
Source record: 20638

```
The Music Communication Company
Akron, OH USA
Email: mccteam@springmail.com

"Special offer for broadcast radio stations"

This is an opportunity to receive music that is exclusively available
for radio stations in a broadcast quality version 6 to 9 months before
the high quality MP3 version will be released for intangible sale to
the public.

People will have to tune into your station to hear the best audio
quality of this music before they have a chance to buy it.

Our first selections are a love ballad and an orchestral composition.

Please submit your email address to receive our free portable website
(4MB in a ZIP file) with complete MP2 music files and license fee
information. Note: Verify that your email address can handle megabyte
file attachments of this size. Many internet companies offer free
email accounts that contain many megabytes of space.

Check here if you need one: http://www.thefreesite.com/

System Requirements:
Web browser (Netscape Navigator or Microsoft IE)
Sound Card
Audio software player (WinAmp, Sonique, etc.)
Zip software (to unzip the file)

Best wishes,

The Music Communication Company Team

I work at WTBQ in Warwick NY, a town of about 5,000 people;
the studios are located in nearby Florida NY (yes, the name is
confusing), which has a population of around 1,800.

It makes me wonder...what's the smallest town in the US that
has a radio station, either city of license or studios?

Clear Channel is selling off the AMFM stations in Des Moines... KGGO, KHKI, KDMI. They're keeping the stations they currently operate in Des Moines... WHO, KLYF, KMXD, KKDM.

No indication they're selling Ft. Dodge or any other Iowa stations, except in Cedar Rapids where they're also spinning off the AMFM stations (KHAK, KDAT, KRNA) while keeping WMT AM/FM, KXIC, KKRQ. I don't know about the fate of the AMFM KTOF-AM in Cedar Rapids, which is LMAed to a religious group.

I think Stirling, New Jersey qualifies -- probably no more than 1000 residents, with their very own "pet" radio station, a 250-watt AM daytimer playing Country music for the past 22 years, and on the air since 1972! The station (1070 WKMB Stirling, NJ) is owned by two people and they're both DJs on the station, along with various young DJs working at their "beginner" job in radio.

It's now the *only* AM country station in New Jersey -- and they proudly call themselves "The greatest little country music station this side of Texas".

They were not on the sell list as the CCU and AFM merger does not require
divestiture in those markets. CCU has announced that it is buying additional
stations beyond the Am/FM merger, and only is selling stations that it has
to sell to meet the concentration of control DOJ and FCC limitations...
otherwise, they would not have sold those, either!

It's an integral. It precisely takes that into account, and weighs it,
and adds up what it amounts so. It amounts to nothing.

It's great hype, is all.

Here's the drill, repeated daily by every news organization.

1. Find a death from some universally-available cause, eg. tornado, somewhere
in the population of 300,000,000.

2. Report the tornado death; Tornados, can they happen here? Tune in at seven.
Answer, yes. What can you do about it? Tune in tomorrow. The sought-out
tragedy is transported into the listener's neighborhood, as if it happened
to the next-door neighbor once every three days. He's worried.

You then get your 17% anxiety-ridden audience worrying about tornados, a
complete waste of their time, but good for your ratings.

You can do it with anything.

I am a strong beleiver in EAS/EBS.. Unfortually a lot of stations dont broadcast the info.. Just do the proper tests.. I will say though, The stations i work at, if a warning is issued.. We fire the EAS immedatly if it's for our broadcast area.. interupting whatever is on the air be it Live Jox, Sydnicated Talk or even sports... somestations are different, our Primary EAS sender for this area that I am in (Central Ohio) hardly airs the EAS over the air theirself unless it's a tornado warning or something of value....

Thats just my food for thought.. I feel it is nice service, expecally in the days of Prophet radio and shuch, gotta have something to get out the warning.. That computer or satellite Jox from LA doesnt know about Tornado, servere weather or flooding, but the EAS/EBS can take the transmission singal when no one is there...

Central Ohio, my neighborhood! I like the sirens, which you can hear in the distance from various towns up to ten miles away, sort of a pleasant eerie wail barely audible as you walk the dog.

They don't put any sirens near us because it's not worth it, and it would cover the distant wailing whose very distance is the point of living in the country.

EAS/EBS is a similar intrusion. How many who live in towns realize this?

The radio communication you want is Jean Shepherd fading in and out in the night.

That requires talent.

I believe I saw a list under the press releases in the investment "stock quotes" section of Yahoo. Go to quotes, enter {"ccu"} which is the stock symbol and then find the news and press releases... this was some time back, though and you may have to look at the archive data.

> greater coverage area (day).

Some radiostations are like that... I know You can program the EAS System to catch and send warnings for specific areas.. Ours receives all of the ones send from the the Central ohio EAS Station and the one for Mid-Ohio... WE sometimes receive allerts for countries out of our Broadcast Area that the Central ohio station services so we just dont air those.....

Im very found of the EAS System myself... I take weather stuff seriosuly cause in Tornado or flooding season, it could be life or death for some people...

> These things are what LPFM IS FOR!!

If i had LPFM id do the same thing, LPFM is about servicing the Community right... We'll EAS and Weather warnings would be the first thign on the air over music or talk...

Country formatted KMKT 93.1 is licensed to Bells, TX, which is 962
people per the 1990 census. That's the smallest that I *personally*
know of, but I'll bet someone else can beat it...

I am immensly interested in any information on the MacKenzie program repeater used many, many years ago (it was also used at CBS Television City for some television game show music cues) Does anyone have any sales literature that they could copy and send to me (will provide mailing address as soon as I get any affirmative replies)? Also, does anyone know of anyone who still owns some of these machines that would be willing to sell one to a very interested person? Thanks in advance to anyone who replies.

Isnt KLTY comp christain music?? My understanding what I've seen of Salem stations is they go for a left up "Positive Talk" Format of non stop christain talk/programming all day on the stations ive seen that they own..... At Least AM 880 here in Columbus Ohio is All of that non sense talk.. Compt christain music isnt bad but thats something missing from a lot of markets...

Prophet seems fairly stable. I use it for live assist in an AM studio (commericals, id's, programming, and limited muisc). Two FM stations use it 24/7 for life assist and automation, works fairly well, haven't noticed any problems... It does lock up on Voicetracking ocasionally but that at least with the reduance doesnt throw the station off the air, as we have a studio computer and a "server" the way prophet is setup (Im not really faimlure with the total interworkings) to be specific.

>know if a torando is going to hit my house....

Yeah. I have heard WNCI break into programming before to announce bad weather, and I most certainly appreciated it. Especially the one time when I was out shopping on the east side near the severe weather.

The idea is not sensationalism, as our resident cynic Ron Hardin likes to think, but warning people of the potential for dangerous situations so they can avoid them if so desired. I certainly don't see the problem with that.

Of course, our dear Ron being Ron, he probably calls up the television stations and hollers at them when they put the little maps up and run the crawls at the bottom of the screen saying which counties are under severe weather watches and/or warnings.

WAIT! We're complaining about the wrong people. We're not going after the people who are causing the problems in the first place!!

DISMANTLE THE NATIONAL WEATHER SERVICE AND NOAA NOW!!!!! IT'S
A GOVERNMENT CONSPIRACY!!!!!!!!!

last week on The Discovery Channel, they said the sun will not burn out.
Rather, they said it would gradually increase in heat until the point that it
explodes. The heat would be so intense that the first few planets would
immediatly fry up.

When I was in school, I was taught that the sun would just burn out, and any
life remaining on the planet would gradually freeze to death.

If the first theory comes true, we won't have time to activate the EAS system.
That's assuming of course humans and the EAS system still exist in that time...

One of Lawrence's most well-known broadcasters was taken away from us. Arden Booth passed away at 4:15 Friday, March 10. He was 88.

His notable broadcasting duties include entertaining the citizens of Lawrence and eastern Kansas on WREN, service in Hawaii and USO during WWII, and, most importantly, founding of KLWN and becoming its first GM.

In addition, Arden strongly believed in service to the community. He volunteered his time with numerous groups and also served on the Kansas Senate for a time in the early 70s. His service to the community earned him accolades from the community, the Kansas Association of Broadcasters, and the Kiwanis Club.

Services are pending at Trinity Lutheran Church and will be broadcast on KLWN.

Bizarre. The FCC database says "Stirling, NJ", but the U.S. Gazetteer
can't find it. The smallest COL I can think of is Churubusco, IN (1781,
as of 1990), home to Alternative/WEJE (96.3fm)

I would suggest that's impossible to determine - as some stations are licensed to unincorporated communities (i.e., WABD-AM & WCVQ-FM Ft. Campbell, Kentucky - there is no such city, it's a military base whose population I would imagine is considered classified) and some have studios in unincorporated rural areas.

Many of these "smallest" COLs are just gaming the FCC system by taking advantage of the credit they give for first local service. For example, AM700 is trying to move from "Walkerville, MD" to "Poolesville,MD" and greatly increase power. But the new transmitter local will be a long way from Poolesville, and the beam will toward Washington, DC, with Poolesville, a bit off to the side.

The population density here in the east often makes size of COL rather meaningless.

Look at the small towns in Colorado like Wray, Silverton, Ouray, Pagosa Springs.

I remeber a few years back they even interrupted their fireworks soundtrack during Red White and Boom to annouce a torando warning.. I give them credit.. I give stations credit that are willing to inform the public, expecally if your in an area that is only serviced by a robot (Prophet or Audio Vault) and there is no human there to annouce the warnings... The EAS does its just there... But then, everyone has a right to their own opinions but I personally see it as a value.

In northwest Iowa there's an FM licensed to "Twin Lakes" a small resort community that's unincorperated. The people who put this station on the the 70s wanted to serve 3 county seat communities, apparently they didn't want the COL to be any of these so they could serve all 3 equally. They probably also wanted the station & their residence (in the same building) on the lake. I'm not sure where the frequency was originally allocated, but it certainly wasn't Twin Lakes.

A few years ago the station (KTLB) was sold, with the studios moved to Ft. Dodge, the largest nearby city (about 25,000 population), and today it's strictly a Ft. Dodge station, but they don't try to hide the "Twin Lakes" COL and even call their oldies format "The Beach."

Northeast

Urban/WJFX (107.9fm, New Haven/Fort Wayne) grabs former KKFR (Phoenix, AZ) overnighter Julian Allison for an undetermined airshift.

Hot AC/WMEE has several changes: APD John O'Rourke is now OM. Chris Didier retains his PD spot. Geno Burgess is new to part-time duties. Burgess was last doing mornings at Rhythmic Oldies/WYSR (94.1fm, Roanoke/Fort Wayne); before that, he did mornings at Urban/WJFX (107.9fm, New Haven/Fort Wayne)

Condolences to the family of Rosalie Guillot. Guillot, 84, was a volunteer at public radio station WBNI (89.1fm, Fort Wayne), hosting the "Matinee" and "Saturday Opera" shows for about 10 years.

Where are they now? Kevin "Crash" Davis, former PD at Country/WBTU (93.3fm, Kendallville/Fort Wayne) is new to mornings at CHR/WLNF in Biloxi, Mississippi.

Northcentral

John Dille, president of Pathfinder Communications, has named one of his general managers as Chief Operating Officer. Tony Richards, GM of N-T/WOWO, Country/WQHK, Hot AC/WMEE, and Sports/WONO will retain his spot as GM at the Maples Road facility in Fort Wayne.

Over at Talk/WTRC (1340am, Elkhart) "Sound Off" a longtime local talk show signed off on February 25. This made way for Ken & Daria Dolan (syndicated from WOR/New York) to return from 1pm - 3pm.

W291AM (106.1fm, Kokomo), the translator for Indiana University's WFIU (103.7fm, Bloomington) increases power from 50 watts to 170 watts.

Northwest

Family Worship Center (WJFM/Baton Rouge, LA) files an application for a translator station on 91.1fm in Monticello.

Central

Karen Vaughn is new to mid-days at Urban/WTLC (105.7fm, Indianapolis), replacing Vycki Buchanon. WTLC is also looking for a Public Affairs Director. If interested, contact me for details on the position.

Chris Schneider and Brett Bowman are now co-promotion directions at Rhythmic/WHHH (96.3fm, Indianapolis). They will also do promotions for Jazz/WYJZ (100.9fm, Lebanon/Indianapolis) and Urban AC/WBKS (106.7, Greenwood/Indianapolis).

Speaking of WYJZ, a big correction is in order. We printed this: The saga of Jazz/WYJZ (100.9fm, Lebanon) versus MyStar is coming to a close. Owner Bill Shirk and MyStar agreed to a deal whereby WYJZ moves their tower closer to Indianapolis, but directional, away from Indianapolis. They'll also raise power to 6000 watts.

The real story, according to both parties: MyStar is dropping the FCC petitions against Bill Shirk (owner), since Shirk agrees to drop a reflector from his WYJZ tower, towards Indianapolis. Also involved is a withdrawal of copyright by Shirk for the slogan "Night Breeze", used on MyStar's WTPI. We also learned that the new site requires that the FCC authorize a directional antenna to protect other stations, including WMGI (100.7fm, Terre Haute).

Pilgrim Communications' WPZZ (95.9fm, Franklin) will be increasing power from 3000 watts @ 299 feet to 1400 watts @ 482 feet. The FCC approved their application recently. We imagine that means a new tower.

We hope to have more in our next issue about a new station for the Blackford County Schools (Hartford City). If you know of what's going on (they seem to have a station on the air at 88.1fm, running 10 watts), let us know!

Bob & Tom affiliate news: They're dropped at WCKW in New Orleans, LA and KRXZ in Lafayette, LA.

Southeast

Where are they now? Former Hot AC/WRZQ (107.3fm, Greensburg) PD (and CHR/WZPL air personality before that!) Paul Kenny (aka John Trout) is now doing afternoons at Hot AC/WPHH (96.1fm, Pittsburgh, PA). Kenny received an A.I.R. award for "Best New Talent" in the Pittsburgh market.

Good Shepherd's WKLO (89.9fm, Marengo/Louisville, Kentucky) is on the air. Does anyone know if it's a distinct station, or if they're simulcasting with WAUZ and/or WJLR?

That's it for this issue! See you in two weeks...

Speaking of 880 WRFD, when did they go to 25kw? I noticed just yesterday
that they were really hard to null out. I live probably 5 miles from them.

I can hear stations under them but WRFD is still on top.

That explains too the occasional images of them at improbable frequencies.

I wonder what their daytime range is. Probably they wanted to convert
the heathen in Cleveland and Cincinnati, and not just the local cow population.

The problem with it is that the odds are all wrong. Resources are misallocated.

For instance, you worry about it, and not eg. traffic, which is 500 times more fatal. And even traffic worry is misplaced, leading to seat belt laws, drunken driving laws, ...

The drill in taking over a ``public problem'' is outlined in Joseph R. Gusfield _Contested Meanings_, U Wisc. Press, 1996; and much earlier _The Culture of Public Problems - Drinking-Driving and the Symbolic Order_, U Chicago Press, 1981. He says he received considerable hostility from the people he was studying in this earlier work, and I imagine this has continued. These are largely people working in the benevolence industry.

The reason he gets hostility from them is that the basis of their owning the problem is from presenting the problem as beyond the need for discussion and argument; they claimed to speak for unanimity. Here is Gussfield, wanting to discuss, and that undercuts the whole ediface.

Yet that is the only way to study it.

Just yesterday President Clinton presented new gun safety laws as beyond the need for discussion. If you notice this in one place, you can start seeing it all over; which is why Gussfield studies it.

One thing that I should have added is one of the reasons that radio stations appear in these little microscopic communities -- trying to minimize the number of competing applicants for the frequency. The hope is that other folks will look at the new allotment and respond with "Bells, TX...where the hell is that?" and not bother to look into it further and discover that it was actually 15 miles from 60,000 people in Sherman and Denison. It almost worked...the allotment only attracted one competing applicant in 1995.

Well, gee whiz, Ron, I am concerned about traffic. I do like to know if
there's a traffic jam or a dangerous situation somewhere if it's during
rush hour. And I suppose you think that drunk driving isn't a problem.

Go stick your head in the sand, then you won't have to deal with anyone
telling you about tornadoes or drunk drivers.

I don't know where you got this stupid idea that the reason EAS was created
(and EBS before it) was to scare everyone.

>Just yesterday President Clinton presented new gun safety laws as beyond the need

This is a non sequitur. How did we go from weather alerts to discussions
on gun safety?

Really. You've argued your point for days, and you still haven't done
a reasonable job of defending your opinions.

Yeahbut...

Salem has owned WHK/1420 in Cleveland ever since Nationwide Communications
got out of broadcasting and sold most of its properties to (then) Jacor.

WHK is a 5Kw station operating out of Cleveland; it's not a rimshot.

I'll be quite interested in finding out what they're going to do with
the other stations they're buying here.

I put the connection in and you edited it back out.

It comes down to something being a public problem because the odds of it
are misrepresented, eg. tornados and guns.

Taking ownership of a public problem consists in making it seem that you
are speaking for society itself, that there is no possibility of disagreement,
concerning the seriousness of the matter. Misrepresenting the odds
makes it seem like disagreement is not possible about its seriousness.

Tornados are a public problem because everybody is about to die in one.

Guns are a public problem because everyone's children are about to be shot by
their playmates.

The way odds are misrepresented is, often, to seek out a death from a commonly
available cause, and report it to the listener, even though you need a population
of 300,000,000 to find a case once every three days. It seems to the listener
as if it's his neighbor being wiped out continually, when in fact his neighbor
will go for 3,000,000 years, as will you, without a problem. These are grounds
for disagreement about the seriousness of the problem.

Ah, sorry about that.

>Taking ownership of a public problem consists in making it seem that you
>are speaking for society itself, that there is no possibility of disagreement,
>concerning the seriousness of the matter. Misrepresenting the odds
>makes it seem like disagreement is not possible about its seriousness.

My response is still the same. If you don't want to hear about the things you're complaining about, go stick your head in the sand. I have no trouble with people occasionally breaking into a stop-set telling me that there is a tornado watch (which we KNOW only means the conditions are right, not that one's been spotted... right?) or a warning (meaning one has been spotted, making the likelihood of a dangerous situation more probable). I'm sorry. I still don't see it as sensationalism. I see it as informing the public of a potential danger.

If you don't want to listen, that's certainly your choice. But for you to argue that the system is broken because it predicts things that are very unlikely to happen is incorrect. I've NEVER seen a mass exodus happen in a given area because some broadcaster mentioned that there was a tornado warning; people are more intelligent than that. They will check out their environment and determine whether they need to take action.

I don't know where you live. I have a Great Lake sitting roughly 300 feet from my bedroom window. Sitting on Lake Erie means I'm subject to more than the typical number of heavy snowstorms and other nasty weather (ask me about the waterspout that hit our parking lot last summer). I *like* the alerts. That doesn't mean that I'm going to panic when I see one, just that I like to be informed.

>The way odds are misrepresented is, often, to seek out a death from a
>commonly available cause, and report it to the listener, even though you
>need a population of 300,000,000 to find a case once every three days.

Bull.

Maybe in your neck of the woods.

Not in Cleveland.
Not in Buffalo.
Not in the parts of Texas and Oklahoma where you have tons of tornados.

Besides, since when is it the purpose of EAS to report deaths? Or the odds of people dying? Sure isn't that way here in Ohio. Here, severe weather reports serve to inform the public of bad driving conditions and conditions that might make it dangerous to go outside (like the occasional -20 degree wind chill). Same with Buffalo, which is "fortunate" enough to not only sit on the butt end of Lake Erie, but gets hit with storms from Lake Ontario too. Their winters are much worse than ours are, and ours are pretty harsh by the standards of most of the rest of the country...

>will go for 3,000,000 years, as will you, without a problem. These are
>grounds for disagreement about the seriousness of the problem.

That's not what I've been disagreeing about. If you've read my posts you would have realized what I've been disagreeing about. You're saying the purpose of EAS and other alerts are to throw the public into a panic. I'm disagreeing with *that*, not the probability that I'm going to get hit by a tornado. Pay attention.

EAS/EBS is part of the system whose idea is that the authorities will tell
you what you need to know.

This is not true. They authorities have no idea what is important, which
is however what they claim to know, and which is exactly what they do not know.

The system needs ridicule from the radio station end, a stand that I think
would be pretty popular, incidentally. Broadcast a warning and its ridicule
together. _I'd_ listen to that.

John & Ken already do a little of it, on KABC.

There's a vast opportunity in the news-ridicule format.

Hi, all:

I have made a modest home page for AM Radio DXing (among other things), and have added my own aircheck in mp3 or RealAudio. No porn, pop-ups, cookies, frames or Java.

You can check it out at:

http://freepages.hobbies.rootsweb.com/~shawpage/index.htm

If you have other links you'd like to see me add, just give me a holler. When I get enough airchecks converted from cassette to mp3/RealAudio, I'll add a separate page for them.

Thanks!

This open position is different from anything else you're likely to see when it comes to radio news:

The Sun-Sentinel is seeking a Broadcast News Coordinator to report and produce radio news and feature programming on a daily basis. The position requires on-air work as a radio reporter/anchor for the Sun-Sentinel producing news stories for stations with all-news and public radio formats in both the Miami and West Palm Beach markets. We're seeking candidates who can demonstrate strong editorial values and understanding while working with a 380-person print news staff to develop compelling news and feature stories for broadcast. The Broadcast News Coordinator will also be involved in producing daily news for the Sun-Sentinel's television partners and encoding audio and video products for the Sun-Sentinel's Internet sites.
The position also requires the ability to effectively work as a member of a team under tight deadline pressure and a thorough knowledge of broadcast reporting, writing and audio production techniques.
To apply, please e-mail your resume to dblackwell@sun-sentinel.com and mail your tape to:

David Blackwell
Deputy Managing Editor, Electronic Publishing
Sun-Sentinel
200 E. Las Olas Blvd.
Fort Lauderdale, FL 33301

100 Newbury would be in the middle of the *very* fanciest shopping
street in Boston. If it was really there, it would have been
quite palatial.

The LPFM Channel Search page at
http://www.recnet.com/rec/lpfm/chs-rec.htm says there are no open LPFM
frequencies for Worcester, MA. Sorry. (Shouldn't they have researched this
first before going ahead...?)

I think one needs to do further research before putting all of your stock into
the recnet/lpfm search page. Doing a search on Elizabeth City NC netted 5
channels that would be available for LPFM's....well I would say different with
their findings. One channel that was listed was the frequency of 107.7 for a
10 watter .Well there is a station in Winsor Va...which is clearly listenable
here,but just a few channels down at 107.3...a frequency that is only occupied
in this region is when certain atmospheric conditions occur. I'm not sure where
or how recnet/lpfm gets their info for their search engine, but I'm almost
certain that it needs a lot of fine tuning.

The FCC bases the spacing criteria for LPFM stations purely on mileage separations, not on the "listenability" of stations, so I suspect that REC's frequency search is working okay. I would note locally (Dallas, TX area) that there are many instances of full powered stations that are operating second adjacent to channels that are still listenable, even though the listener is well outside the station's "protected" contour.

However, it is never wise to assume that such an automated search is going to be totally accurate -- there are too many changes going on in the FM band, and inevitably the FCC database will be missing something or in error.

Today KSAN 107.7 in San Francisco sort of changed formats from a softer, more 60s-70s leaning classic rock to a "classic rock that really rocks" format that leans very heavily towrds 80s hard rock staples such as Van Halen, AC/DC, Def Leppard and Ozzy. So anyone have opinions on this format, and how sucessful it has been in other markets?

Somehow, I'm not surprised. Although I haven't heard any breaks quite that long, I do routinely hear seven and eight minute stretches of commercials (note that I'm *not* counting station promos and the like in this total) on KDMX, Mix 102.9 here in Dallas.

Anyone else wonder how satellite subscription radio is going to impact the viability of stations that run ultra-long breaks like this?

That's definitely where it was in the late 1970s -- I visited there
a couple of times, and once even got unexpectedly taped for a
newscast -- but the original poster was asking about the 1960s, when
it was a classical station.

I guess the attitude you're espousing here, Ron, is the reason deaths from
natural causes are so high in areas other than the Midwest (especially Iowa).
We take severe weather seriously, listen to warnings, and take precautions.
And we appreciate (and Arbitron shows it) stations that take weather
seriously.

1049. 10 minutes worth of commercials!

Newsgroup: rec.radio.broadcasting
Date: 2000-03-13 00:00:00 UTC
From: LAS <steinx@mindspring.com>
Message-ID: <38CD1CC8.35C9C18C@mindspring.com>
Source record: 20597

Well, this is a first for me--turned on KRLD AM in Dallas yesterday afternoon to hear a replay of "Dr. Laura", and there were at least 10--count'em, t-e-n--minutes of commercials playing. (And who knows, I only caught 10 minutes, maybe there were more.)

I understand there was some sort of ball game on earlier, maybe that had something to do with it. Nevertheless, this trend toward 5+ minutes worth of commercials at a time has become really tedious for us listeners.

Personally, knowing that, say, Art Bell or Dr.Laura will take hefty breaks for commercials (with maybe a dash of weather or traffic thrown in), I change to another station at those times! That's right--all those advertisers who would like me to buy their products don't even realize that I've switched to another station for the 5+ minutes I expect that glut of commercials to last.

Maybe you're in a catch-22 and need all that advertising to stay afloat, now more than ever. I don't know; I'm just a listener. And I can't argue with the financial realities of the radio biz. But I wonder how many other folks switch stations in order to avoid those annoying crushes of commercials. And do you media folks ever wonder about this, too?

Lori
Dallas, TX

(I'd do a similar rant on the glut of TV commercials as well, but this isn't the forum...)

Was this ever actually released to stations? I heard of it being done, but
always assumed it was an in-house project at the stations which aired it (?)

Curious, I tried this once myself. Didn't work very well. The "SSSSS" sound
in "Aja" is impossible to cut completely without also cutting the latter part
of the "AAAAAA" sound. Then again, production wasn't my strongest area...

I think Battle Ground or Brookston, IN, with WASK-FM
and the former WEZV serving Lafayette may be smaller
than 'Busco. Whatever happened to the Silt and Breen,
CO stations, high powered AMs licensed to P.O. boxes.

Also remember the former WGTO-540, (now an Orlando
move-in) licensed to and located within "beautiful"
Cypress Gardens, FL. Phredd, are you posting Indiana
Radio Watchers anywhere these days? Haven't seen it
since the demise of ARJ.

It's highly posible that due to scheduling of those spots, that they had to be made up... If they where scheduled... (since Dr Laura was bumped) (usually laura, rush etc..) are sold as "block programming" ie specific companies support them... now if laura was moved ahead its highly possible that they had other spots to "make good" during those hours (since radio stations cant drop laura for a ball game due to her stupid contract you must carry it no matter what even if a ball game is in her slot you must tape delay it. so possibly they had spots to play durning those later hours and had to make good on them... That's the life of radio!.

The smallest one I ever worked at was KCGQ-Gordonville, MO ... Gordonville had a population of 282! Sure it was just 15 minutes to Cape Girardeau, MO...but we had the studios IN Gordonville! We had a 3-bedroom house, with an automation system in the living room...a control room in a bedroom, a PD office in another bedroom, and the sales department in the basement! The wierd part was, that a COUPLE actually LIVED in the house!! We were automated all night long, and this couple were "on duty" all night long. There were several nights where I was working late, and I could hear that nasty pair "bumpin uglies".... The station has since moved out of that house....

Okay Pru top floors revisited...

the roof.. (Main Tower) top tv68 than 1st FM master antenna BCN,MJX, XKS and ZLX than 2nd master ROR,TKK soonBOS. backup tower etc.
PH2 (penthouse 2) WMJX, WROR and WTKK transmitter rooms in Modules on lower roof (stairway to upper roof hatch)
PH 1 (penthouse 1) Combiners for the two FM Master Antennas
52nd floor Top of the Hub (The Restaurant)
51st floor Mechanical Level WBCN, WXKS, WZLX former WERS transmitter rooms
50th floor Skywalk Level (BCN "later rock era 73?-81" studios with windows visable on skywalk)

On the early Rock years of BCN ... I have been having some debate with some older BCN people about when they moved to the Pru. We think it might be 73 or 74. The Pru took quite a few years to be built. WBCN's pattern would have been devastated by the building and with their short spacing to Hartford they did not have the ability to move to the Needham/Newton Towers. The Pru was concerned that they could delay construction and decided to offer them a home on top of the Pru to not have that happen. The original transmitter location was on 50th floor with the studios and offices all clustered right around it. We also know there where a few years at Stuart Street before the move. I guess the question is if the transmitter was moved first and than the studios or if it all went up there at once. Damn I could have asked Charles the other day at the Fleet but he probably forgot somewhere in the eighties.... I know we all helped move them out in 80 when the Transmitter went up to 51 and the Studios to 1265 Boylston St. Metro Traffic moved into part of the area later for several years..

The post about Gordonville, TX reminded me of another
small town that has a station licensed and for awhile
contained within. WIBN, Earl Park, IN, population not
over 500 in the very rural part of Indiana between
Lafayette and the Indiana overrun from Chicago. It was
located in an abandoned school building with broken
windows. You'd walk in and the door closing would echo
way down the hall like any ancient school building.
Acoustics left a lot to be desired. They're now 25kW
and relocated to Kentland (not that much bigger).
They're not a move-in to Lafayette, and lots of their
business is farm-oriented (there's little retail there).

This would have been around 1966. I visited the station often because I had friends working there and it was close to Emerson college. It was on an upper floor. The ground floor stores were palatial. Upper floors were another matter.

radiofan@webtv.net was

>... looking for WBCN's studio address in the 60s, when it was the flagship of The Concert Network.<

For some reason 171 Newbury Street comes to mind.

I can't say with precision because it pre-dates my era with the station, but the WBCN / Concert Network studios for the era of classical music (and the early rock era) were indeed within the 100's on Newbury Street in the Back Bay section, as Rich Wood recalled.

Because Boston does not have a conventional street grid (to put it mildly... What seem to be parallel streets intersect), 100 street numbers on Newbury stretch over two blocks between Clarendon and Exeter Streets, including some very exclusive shopping territory as Ron Newman described. But the facility itself was far from palatial. It was described to me as a grungy walk-up several floors above street level posh.

Some time before July 1970, when I began my time with the station, the studios had relocated to an equally grungy place without functional air conditioning, the third floor at 312 Stuart Street (between Arlington & Berkeley) opposite the Greyhound bus station. WORL (950 AM) was then on the fifth floor of the same building.

Both these sites are just a few blocks away from the older 26 story John Hancock Building, then the transmitter site. Construction of the adjacent 62 story John Hancock Tower compromised the signal so badly it forced relocation of the BCN transmitter to the Prudential Tower at 800 Boylston in early 1973, and the studios followed later that Spring.

"The Skywalk Studios" occupied the southern half of the 50th floor of "the Pru" - where the outer ring is a wrap-around observation deck. The address on our stationery then was 5005 Prudential Tower. (Ron Newman and Chuck Crouse came close, the 52nd floor was the "Top of the Hub" restaurant and lounge.) Over the air we simplified the mailing address to "WBCN Boston 02199." There was little chance of misdirection because our post office was in the basement of the building.

Even though the company jettisoned the last of the other owned stations with the sale of WHCN Hartford in August 1974, Concert Network remained as the name of WBCN's licensee up until the sale to Hemisphere Broadcasting (in 1978), which eventually became known as Infinity.

After I left in August 1979, WBCN moved to the current studio location, 1265 Boylston Street, on the opposite side of Fenway Park from where "The Boston Tea Party" (site of the first BCN rock broadcast 3/15/68) used to be (behind

the" Green Monster") on Landsdowne Street.

Actually, the Back Bay, where Newbury Street is, has one of the few
regular street grids in Boston. Street numbers run about 50 per block,
starting with 0 (!) Newbury at the street's east end at Arlington Street.

Apparently no one has heard WGN try to clean up leftover spots
after a game.
This has been the case every station I've worked where a special
event has been sold. It's usually the exception rather than the rule
and will likely have no effect on long term listnership, since the
changeover between the game and the return to regular programming
usually results in an audience turnover any way.

You should have heard KMOX in the early 80s after the commercial
matter limit came off.

Tom,

Just a note on your post: Even 7-8 minutes of commercials is plenty of time for me to hop over to KVIL 103.7 or another station to catch a song.

[Although lately I've suspected that the radio stations in Dallas are involved a big conspiracy where they all play their big commercial blocks AT THE SAME TIME!!! So no matter where I jump, it's commercials, commercials, commercials...What nerve! ;-) But now I've wised up and am learning to just slip a tape into the cassette player instead.]

And--from this listener's point of view anyway--anything that is not talk radio, news, or music is a commercial, including station promos. Technically, I understand that a station might consider promos separate from actual "commercials", but *practically* speaking, listeners aren't usually tuning in to hear promos any more than they want to hear commercials. (Exception--to find out contest info, maybe.)

All I know is that, when that commercial barrage starts, I opt out, regardless of whether that chunk of time will include commercials, promos, etc.

Guess there are some cases in which you could spread those commercials/ promos out every few minutes, instead of doing them all in one chunk--except there are so many commercials and promos these days, I'd probably be about equally annoyed!

Oh well. I guess maybe all those ads are what it takes these days to keep radio (particularly AM?) profitable.

Is it merely the fact that imitation is the sincerest form of
broadcasting, or do stations consciously arrange their clocks so that
everybody is in commercial at the same time? Either way, a lot of us
will not stay tuned through a 5-minute block of ads. (especially when
so many are seemingly intentionally annoying...) If that's what we find
on *every* station, then the radio ends up turned off. (or on NPR, or
CBC over the Internet...)

Might it not be productive for somebody to give up on the "9 in a row"
idea, and intersperse a 1:30 break after every song?

True, but only for a limited subset of temporarily parallel streets in the area.

Newbury Street, Commonwealth Avenue and Marlborough Street (which begin opposite the Public Gardens and increase numbers as they move WSW) do share a grid. But it's only three blocks wide!

You can go north to Beacon Street or south to Boylston Street and find that both the numbers and numbering interval distance are completely different.

At Arlington Street, 0 Newbury is equivalent to 188 Beacon or 348 Boylston. Move 3 blocks to Clarendon and 92 Newbury is equivalent to 268 Beacon or 532 Boylston.

That's the number. I think it was owned by Mitch Hastings. WBCN,
Boston, WHCN, Hartford, WNCN, New York and W*CN in Providence made up
the network.

1066. Alex Dreier is gone

Newsgroup: rec.radio.broadcasting
Date: 2000-03-14 00:00:00 UTC
From: UltimaJock@webtv.net
Message-ID: <23323-38CE9648-47@storefull-147.iap.bryant.webtv.net>
Source record: 20522

Alex Dreier, whose news career spanned shortwave reports from Nazi Germany to the sattelite age, died March 12 at his home in Rancho Mirage, California. "The Voice," as he was called by colleagues during his tenures with NBC and ABC Radio, was 83. The cause of Dreier's death was unreported at the time of this writing.

Dreier's baritone delivery was unmistakable to radio listeners during the early days of the Second World War, when NBC had stationed him in Berlin as their counterpart to CBS' William Shirer. His fluency in German helped him in his dual duty as NBC correspondent and U.S. intelligence agent. Friend and colleague Red Quinlan told the Chicago Sun-Times, "He went to [Nazi officials'] parties and was a favorite with them. They were positive he was going to turn and become one of them." In fact, his subterfuge was so brilliantly created that many of Dreier's own friends thought he was a Nazi sympathizer.

But Alex Dreier was no Lord Haw Haw. When the Nazis found out about the charade, they beat Dreier severely and tossed him over a fence at the Swiss border. Although the beating left him with a lifelong limp, the timing turned out to be a feather in Dreier's occupational cap -- he was expelled from Germany on December 6, 1941, the day before the Japanese attack on Pearl Harbor. For years afterwards, NBC promoted Dreier as having been the last American reporter in Berlin before the United States entered the War.

Throughout the '40s, Dreier had the Saturday evening news commentary program on NBC Radio. It was scheduled in the same time slot that Lowell Thomas was heard in on weekdays, and many local stations promoted the two as a team of sorts, even though the New York-based Thomas never actually worked on the same broadcast with the Chicago-based Dreier.

Dreier's utility announcer went on to bigger things in subsequent years -- his name is Hugh Downs.

Dreier made the eventual transition to Chicago TV news, anchoring first the evening newscasts on NBC's WMAQ-TV and moving, in the mid-'50s, to ABC's WBKB-TV (now WLS-TV). At a time when ABC's television fortunes were relatively low in comparison to CBS and NBC, it was always able to point to Dreier as the top-rated TV newscaster in what was then the Number Two market in the country.

Dreier also continued his network radio duties throughout this period.

In 1967, Dreier moved to KTTV Los Angeles, where he also began dabbling in TV and film acting. Perhaps his most memorable movie appearance was as the news commentator in THE BOSTON STRANGLER; his TV series

appearances on "It takes a thief," "Rod Serling's Night Gallery" and "Land of the Giants" still pop up occasionally on Nick at Night's TV Land and the Sci-Fi Channel. He was also a regular on "What's it all about, World?," a short-lived ABC comedy variety series in the Spring of 1969.

Dreier won seven Emmys during his television career.

In his later years, Dreier served as chairman of the board for the Annenberg Center for Health Sciences and as board member of the Eisenhower Medical Center.

On his ABC radio commentary Tuesday, long-time friend and colleague Paul Harvey characterised Dreier as "an enormous man with a voice and a heart to match." No doubt, many Chicagoans and Angelinos, not to mention fans of Old Time Radio, are remembering Alex Dreier just that way today.

I found an old tape made of KISS-FM (KTKS, Dallas/Ft. Worth) from the mid 1980's. The tape actually had commercial breaks. I didn't count the number of songs they played in a row, although they were billing themselves as a 10-in-a-row station.

What I did like was the short commercial breaks, non exceeding 3:00 minutes. Personally I can handle that. 4:00 minutes is pushing it, and 5:00+ minutes is too much.

>That's the number. I think it was owned by Mitch Hastings. WBCN, Boston, WHCN, Hartford, WNCN, New York and W*CN in Providence made up the network.<

Yes, Rich, the late T. Mitchell Hastings, an associate of Major Armstrong and developer of the dual polarization FM antenna, was the principal owner of Concert Network, Inc., whose station in Providence was WXCN.

An early 60's promotional flyer depicting "The Golden Chain" of classical music included Mount Washington NH's WMTW and WDAS in Philadelphia as Concert Network affiliates, although they were never O&O's.

That Dallas station had to be using a Voxpro to
squeeze a full 10 minute break. If I were the sponsor
buried in that cluster I'd be yelling.

I think with the advent of "clusters" they are
deliberately breaking at the same times, so if you
tune, for example, to one of our local Clear Channel
stations, and tune out the spot break your going to
hear it on the other ones of their's too.

I remember working at stations trying hard to
"pre-stop" the competition.

1074. Alternative Stations: The Wheat From The Chaff

Newsgroup: rec.radio.broadcasting
Date: 2000-03-14 00:00:00 UTC
From: dsembr01@ox.slug.louisville.edu
Message-ID: <slrn8ctigp.kln.dsembr01@ox.slug.louisville.edu>
Source record: 20530

There seem to be two different types of alternative stations on the airwaves. There are so-called ``alternative-rock'' stations owned by big conglomerates such as Clear Channel. Then there are a few *real* alternative stations, most of which are based out of colleges.

WWNX/Atlanta <URL:http://www.99x.com/> is a prime example of the first category. 99X has a lot of emphasis on currents. Plenty of emphasis on heavier active-rock stuff such as Korn and Limp Bizkit. These kind of stations call themselves ``alternative'' yet are vying for mass appeal and I could write their playlists on a little sticky note. Many large markets don't even have *this* kind of station and strangely I find that sad. Louisville just got theirs (WLRS) back and they are playing *Metallica*, for crying out loud. These are the kind of stations that make people think, ``alternative, yeah, alternative to good music''.

WWCD/Columbus <URL:http://www.cd101.com/> is a prime example of the second category. CD101 is a commercial station exhibiting the college-rock attitude, playing a healthy mix of currents, recurrents, tracks other than the singles from the latest albums, and other songs from what seems to be quite an extensive library, quite large compared to stations of the first type. Their announcers do a great job without sounding subdued or overdoing it. They serve Columbus well. They exhibit class. I think they're even locally owned but I can't be too sure. Here in Louisville I've been listening to them for the past week and it's quite a refreshing change from the pabulum.

I'd like to hear of other examples of *real* alternative stations on the commercial side of the dial around the country (USA) that saw the light.

>they are playing *Metallica*, for crying out loud. These are the kind
>of stations that make people think, ``alternative, yeah, alternative
>to good music''.
>

These kind of "alternative" stations more and more just call themselves
new rock. They are more less a updated form of the "rock 40" format that was
somwhat popular in the late 80s. They also are finding out, that for better
or worse, the only newer rock acts that seem to have any staying power are
the acts on the heavier side of the spectum, like Korn, Creed and the Red
Hot Chili Peppers, and the rap-hard rock fusion acts basically compliments
these acts, because aside from their volcal styles, they are hard rock. The
pop leaning "alternative" acts have basically had no staying power, such as
Tonic, Weezer, and Third Eye Blind.

>WWCD/Columbus <URL:http://www.cd101.com/> is a prime example of the
>second category. CD101 is a commercial station exhibiting the
>college-rock attitude, playing a healthy mix of currents, recurrents,
>tracks other than the singles from the latest albums, and other songs
>from what seems to be quite an extensive library, quite large compared
>to stations of the first type. Their announcers do a great job
>without sounding subdued or overdoing it. They serve Columbus well.
>They exhibit class. I think they're even locally owned but I can't be
>too sure. Here in Louisville I've been listening to them for the past
>week and it's quite a refreshing change from the pabulum.
>

Also keep in mind that in Columbus, there are two active rock stations, one
of which is more or less you typical anything that "rocks" is played active
rock, and the other being a very strongly current intensive active rock

station that could just as easily be put in the "alternative" category.

>I'd like to hear of other examples of *real* alternative stations on
>the commercial side of the dial around the country (USA) that saw the
>light.
>

KCNL in San Jose is sort of a new sub genre of alternative rock station,
basically I would call it classic "alternative" rock with a very strong lean
on 80s syth and new wave acts. I believe the St Paul MN triple cast staion
also is a similar format to KCNL.

Oh People
You are forgetting Alaska; the Last frontier..where people actually, still RELY on radio.

KXKM 89.7 McCarthy is probably the smallest station, as it is just a 100watt transmitter, relaying KCHU AM770Valdez. (Yup, Alaska FMs can repeat AMs) Still, it is licensed to the setlement of McCarthy (Pop..25). It's located at the end of a dirt road between Glenallen and Valdez in Wrangell St.Elias National Park..approx. 150 miles east of Anchorage. However it is licensed as a station, and not a repeater or translator.

Now if you want smallest station with a real studio, transmitter and local facility it may possibly be KCUK 88.1 Chevak pop.300.
It's owned by the local school. Most of the times it relays KYUK AM640 Bethel, although they feature several hours of local school-originated programming during the school day.

Heck...that's enough time to catch *two* songs, assuming that neither of the songs is "Stairway to Heaven"! What I found works well is to just pop a tape into the player at the start of the commercial break. Of course, once I do that, I don't necessarily return to the radio at the end of the break.

I think that would be irritating...

But how about three songs followed by three commercials. That would give you four breaks an hour and twelve minutes of commercials. It also matches recent reserach on what pop listeners say they prefer (more frequent but shorter breaks).

1080. Smallest Radio Station not Town

Newsgroup: rec.radio.broadcasting
Date: 2000-03-14 00:00:00 UTC
From: R J Carpenter <rcarpen@erols.com>
Message-ID: <38CF36C2.38A4@erols.com>
Source record: 20536

KRNW(FM) Boulder, CO, was probably the smallest station. For many years in the later 1950s into the 1960s it operated with one of everything.

1 transmitter (2 or 3 kW Westinghouse)
1-bay antenna (about 25 ft above ground)
1 control_room-studio
1 console
1 microphone
1 turntable

Yes, one turntable. Needless to say it was a classical music station. Those were the days before you could get programming "off the bird", so all the music came from that one turntable.

> "alternative" basically lost its meaning about 8 years ago.

First of all I was talking about ``alternative'' as a radio station
format---not just as a style of music, but also as a way of thinking
when programming a radio station.

I'll give it that the style(s) of music that people call
``alternative'' is vastly different from the alternative music up to
the 1980s upon which it's influenced. Just like the new ``country''
music is vastly different from the older stuff yet people still call
it ``country''.

Even back in the 80s ``alternative'' was really a bunch of different
styles: new wave, power pop, european dance pop, etc. We have a bunch
of 90s bands now, many of which were influenced by the earlier
material. The point I'm trying to make is that what I consider a true
``alternative'' format is a healthy mix of *all* those styles music
all the way from the 70s to today.

The official industry terminology still seems to be ``alternative''
though. Many of these stations also call themselves ``the new rock

alternative'' (how original!).

> They are more less a updated form of the "rock 40" format that was
> somwhat popular in the late 80s.

What was ``rock 40''?

I'm not sure it has passed. Some of today's alternative rock could be
classified as heavy metal, no?

> Someday when those who absolutely loved it were 30 to 40 would they
>want to hear it and/or would they get a chance to hear it on the radio.

I was a teenager during the 80's. I never cared for most of those really heavy
acts when they were new. I can't speak for the people who might have liked it,
however.

Some of the "lighter" heavy metal still works today. Van Halen, ZZ Top,
Whitesnake, Great White, etc... These groups would compliment any station that
rotates 80's hits.

> I am still wondering. Lest we forget, Twisted Sister, Motley Crue, and the
20
>or 30 other acts of the early to late 80's were HUGE. Now just a footnote

He's taken an indefinite leave of absence. Gene Burns is currently picking up those two hours as well, and has a 12-4 slot on 1060. (The first hour, 12-1, is the TalkAmerica show which Burns hosts, the other three hours are specifically for WMEX.)

John Ross...
>... confirmed the address with Ben Dawson, who was chief engineer at WBCN around 1956. 171 Newbury Street is correct.

Around 1967, when they were installing an overnight automation system, they offered me a job sleeping in the studio. They needed a warm body with a Third Phone to be legal operator-on-duty and sign the logs. The theory was that an alarm would wake up the operator if something went wrong. I didn't take the job.<

Thanks John. The automation system you speak of did daytime duty in 1968 following the switch to full-time rock. Nights were prime time in the "underground" era and the first to be staffed with live jocks.

By the time I arrived at Stuart Street in 1970 there was a live line-up 24/7, but the office was still used as a place to catch a quick nap. One night I arrived to find Bonnie Raitt asleep in the bean bag chair next to the traffic desk.

And as a follow-up, I believe moving the studios to the Prudential Tower happened in April 1973. We were definitely still at Stuart Street for the 5th Anniversary celebration on March 15th.

My guess is that you're referring to Disney's 'The Zone' on 105, et al. The station pales in comparison to the Cargill-owned REVolution format that debuted the signals to the Twin Cities, but it has improved significantly since John Lassman was removed as PD. REV was truly an alternative format (not just alternative rock).

Rob, thank you for posting. I do realize that the EAS is not required to be used for weather and is there mainly for the purpose you stated. In my area, though, I often see alerts (when they bother to issue them!) only using words scrolling at the top of the TV. No sound has ever accompanied an actual alert! Do you have any idea why this happens? The tests always include the attention grabbing noise.
I do agree that there is a break in the chain of command concerning EAS usage in this area. Who could I speak to that would care and help me with this? I would appreciate it if you could tell me the title of the person I need to consult with about this problem.

Many years ago, I used to frequently visit KGRI in Henderson Texas. My Aunt had a Saturday morning radio there show and I loved to tag along. One one trip, the station had just signed on it's new FM service. They had installed a new 1 kW FM transmitter. The feeder line ran through a very crude hole in the building and across the grass to the (not very tall) AM tower. The antenna element was somehow jury rigged to the side of the tower, but the riggers had not secured the transmission line, which usually was blowing in the breeze.

The program source consisted of two Wollensak mono tape decks, the kind your high school used to have. They sat on top ot the AM Board, in plain view of the AM announcer, whose job now included keeping an eye on the Wollensak's. When the tape would run out on one deck, the DJ, who was usually busy working the "real" (AM) station would notice the tape spining wildly out of control, with the tail of the tape hitting everything in sight. This was his cue to stop the deck, reach around the back side and unplug a 1/4" phone plug from the output of the deck. He then plugged it into a jack on a silver Budd Box that had an old Altec Salt Shaker mic mounted to it. After the hum and buzzes subsided, he would announce "KGRI-FM, Henderson" from a foot or two away from the mic. He would then unplug the 1/4" jack form the Budd box, (which presumably had some sort of mic pre-amp in it) and insert the plug into the output jack of the other tape deck. That task accomplished he would then start the second deck. Eventually he would rewind the first tape and repeat the process when the second deck ran out of tape.

Stations like these may be why in the 50's & early 60's, FM was short for "Forget Money." I guess nobody was listening.

The live Dr. Laura show fed Monday though Friday 12 PM PST/3 EST to 3 PM
PST/6 PM EST) allows for:
00: to 06: Local News window (could be used for spots)
floating break: (2 min network spots) 3 min local
bottom of the hour (hr 1 and 2) :30 Sec Network 4 minute local)
floating break: 2 min network 3 minute Local)
top of the hour 58:50 1 min local avil.

hour 3:
same except that the bottom of the hour there is 5 minute local avil.

Still a lot of commericals....

>What was ``rock 40''?

Rock 40 was a format that was semi popular from about 88 till 92. It basically was stations playing mostly hair-metal bands and arena rock acts, with the occasional U2 and REM thrown in. Even though these stations played rock, they classified themselves as top 40. Pirate radio in LA was rock 40, so was KEGL in Dallas, and I even believe that WAAF at onetime was considerd rock 40.

Ron Hardin(the head),
EAS/EBS tests are not a matter of legal rights! Could you inconvenience yourself just a few moments if it saved ONE life! What "odds" do you put on a human life sir? Even if it is "only" one?! And the argument about areas not immediately affected by warnings is wiffle-ball! Does anyone travel? Do they all literally work in their backyards? Does anyone in YOUR "sphere of existence" have relatives or acquaintances in another community? If you wanna play "the odds" sir, go to the casino! Someone elses' emergency may not be YOURS and visa-versa. Boo-Hoo! Too bad!
Unfortunately there doesn't seem to be an EAS/EBS warning for your emergency.
For it is quite apparent that YOUR emergency is strictly psychological and spiritual! And I sir, have patiently sat through NUMEROUS posts/warnings about that!

>tower (still there) not associated with WBCN .

That was the former WBMS-FM. It had been on 104.1 in the early fifties but seems to have been unable to make ends meet. WBMS AM 1090/FM 104.1 was Boston's fist attempt at a commercial classical format, circa 1950; its demise led Ted Jones, the owner of WCRB, to convert that station to classical. One of the announcers at WBMS was one Richard L. Kaye, who moved to WCRB as program director/chief engineer; he ended his career there in the mid nineties as chairman of the board.

I'm looking for a new transmitter for one of my employer's stations, and one of the brands I've been asked to consider is BEXT.

Does anyone have any experience with BEXT?

How reliable are their transmitters (particularly their solid state models)?

How does a BEXT exciter sound compared to, say, a BE FX-50?

How is BEXT with regard to parts and service?

Any input would be welcome.

WVBI(FM) (now WCRI), Block Island, RI, used to be a CD juke box connected to a console and an STL (no audio processing) with a 100-watt transmitter in a converted dog house at the other end of the STL. It played random cuts from CD all day, and at the top of each hour a timer would cut off the music and trigger a cart machine with a recorded station ID that said: "WVBI, Block Island's classical music station."

Since my employer bought it, it's a 6000-watt station, still classical and bird-fed from our studios in Boston, with local content coming from a new studio in Westerly, RI (the former WWRX air studio, in fact).

And yes, for the moment it's still mono, although that may change in a few months.

In previous incarnations of this news group there has been some discussion on stations that still program "easy listening" music. Well, I just came back from a long weekend in Rochester, Minnesota, and had the opportunity to listen to KNXR-97.5.

In fact I instantly got hooked on it, probably because I haven't heard anything like it in years.
The audio quality on the car radio and my little Sony portable was excellent (here's an FM station that would be worth listening to on a vintage McIntosh, Sherwood or H.H. Scott tuner). The music mix was forground as opposed to background, for the most part 50/50 instrumental/vocal mix. It sounded like they have quite a library and obviously someone who knows what to do with it. Weeknights also featured a 3 hour block of John (is he still alive?) Doremus. The local commercials were interesting, usually an air talent adlibbing an interview with a local business owner (as opposed to Joe from the used car lot waisting 30 seconds of air by stuttering his way through bad copy). They also had CBS news on the hour. They did have summary's of Minnesota news but very little was Rochester
specific. Sunday evening was devoted to the Rochester Symphony and a classical music block.

All in all I was impressed.....the Doctors at Mayo say I'm fine and I've got several minidiscs of KNXR in case I need some stress free listening.

Obviously, I won't be very popular for saying so, but I agree with a lot of things that Ron Hardin has to say.
From the time we are born until the day we will die, we are warned of "emergencies" by a system which is at best, unreliable and at worst, a cause for unnecessary fear and panic.
We do face dangers everyday that have no warning system. These things are much more likely to kill us, but the government must not feel that those things are important enough to 'alert' us about.
Since Conelrad/EBS/EAS started as something to warn us of nuclear attacks/war, shouldn't something less terrorizing be created to warn us of bad weather? EBS became a national joke. It was ignored for by lots of people. The reason is that after so many years of seeing it 'tested' but not used in actual emergencies in many areas, it lost its power and significance. The same is happening to EAS. People see it, hear this noise, know what it should mean, but in many places it will never be used to warn anyone of a real emergency.
Shouldn't every station be required to use this attention signal when it is an actual emergency? I know they are required to test it, so why aren't they required to use it? Does anyone have the answer? What good is testing it and familiarizing people with it if it is never used to warn them?????
Also, the reliability of the EAS is nonexistant. I live near chemical plants that have often had leaks or other problems. Later I would read about it in the newspaper. In 90% of the incidents, the paper reported that EAS failed to issue the warning even though it was activated.
Ron Hardin, if you ever want to talk about the EAS/EBS with someone who understands your views, e-mail me at angelcomehome@webtv.net. I'd be interested in hearing what else you have to say on this subject.

Reminds me of a competing station in a small market I once worked in. Had a basketball tournament about two weeks before Christmas. Came out of the games and played 55 straight minutes of spots. This was in the days of the voluntary 18-22 minutes per hour.
BTW anyone timed KZPS and their breaks. Seems like it comes close to a regular ten minutes during afternoon drive.

That would have been hard to do. Dr. Laura is fed via satellite. There are no "holes" in the format that allow for a 10-minute block of commercials. Even the news window at the top of the hour is only 6-1/2 mins long.

I don't think clusters would deliberately break at the same time.
Makes no sense. It would drive fickle listeners away from that groups radio
stations.
In Grand Rapids, WKLQ and WLAV, both rock stations owned by the same group,
stagger stopsets so that always one of the facilities is pumping music.
WSNX and WVTI, contemporary stations owned by Clear Channel attempt the
same.

The owner, manager, DJ, etc, was also a whiz at fixing things. He couldn't really design electronics, but he could "repair" it until it worked very well. He also ran a recording company and had a disk recorder in another room that could probably be brought into use - or even more likely one of the faithful listeners would lend a good turntable. I knew at least one who had a broadcast-quality self-built turntable, etc.

Small-town FM stations in a high-tech town weren't like the Big City. All has changed these days around Boulder.

I wondered at the time what would become of the heavy metal era after it passed. Someday when those who absolutely loved it were 30 to 40 would they want to hear it and/or would they get a chance to hear it on the radio. I am still wondering. Lest we forget, Twisted Sister, Motley Crue, and the 20 or 30 other acts of the early to late 80's were HUGE. Now just a footnote in rock & roll history. And most likely never to be heard on public airwaves. A very few of these acts are a part of some classic rock stations, but as a friend called them, these were light alloy, not really heavy metal.
Just wondering out loud.....

Let's take a step back... EBS/EAS is so the president can speak to us in times of a national emergency.

The FCC doesn't "require" the EAS to be used for weather alerts, etc. Those stations who do use EAS for weather (and other life threatening emergencies), are commendable.

>EBS became a national joke. It was ignored for by lots
>of people. The reason is that after so many years of seeing it 'tested'
>but not used in actual emergencies in many areas, it lost its power and

The main reason EBS was ignored, especially during tests, was because of that damn long attention signal . People got tired of hearing :30 seconds of continuous beeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeppppppp during tests. The FCC dealt with that.

> Shouldn't every station be required to use this attention signal
>when it is an actual emergency?

They do... When the EAS system is activated for an alert, you'll hear the chirps, followed by 8 seconds of the old EBS two tone signal, and then the alert message.

>Also, the reliability of the EAS is nonexistant. I live near
>chemical plants that have often had leaks or other problems. Later I

This suggest there is a break in the chain of command of things. Perhaps the warning was not properly communicated? You need to take advantage of this and speak up about it!

Larry,

The Dr. Laura I was listening to was a re-broadcast--oops, so sorry, I mean "an encore presentation"--that the station plays on Sunday afternoons. As you point out, the live feed, Monday thru Friday, doesn't permit 10 minutes of commercials (although it's still a big enough chunk that I surf on over to another station.)

BTW, it was a fluke that I happened to end up timing the whole thing. I got in my car, flipped to see if the show was on; the station was into commercial, and I noticed it was 3:10, then later 3:20 when the commercials finally broke.

******

From what I'm hearing, sounds like the major culprit here is sports programming. As a woman who seldom tunes into sports programming, no wonder I've never noticed this 10-minute problem till now. So...

...How about stations prevailing upon the various sports leagues to actually schedule in more commercial break time so that the stations can get their commercials in during the game, not all clumped together at the end.

This might add a few extra minutes of non-play throughout the game. And sure, fans would have to sit there waiting a little bit longer for play to resume. But what the heck, sports has become so commercial and fan-unfriendly anyway, why not? Just my opinion, speaking as a baby boomer who remembers the good old days....

I have just confirmed the address with Ben Dawson, who was chief
engineer at WBCN around 1956. 171 Newbury Street is correct.

Around 1967, when they were installing an overnight automation system,
they offered me a job sleeping in the studio. They needed a warm body
with a Third Phone to be legal operator-on-duty and sign the logs. The
theory was that an alarm would wake up the operator if something went
wrong. I didn't take the job.

Sounds to me like said TV station isn't even using the EAS... Do you even hear the familiar chirp noises before / as the text scrolls? If not, I'd guess they aren''t even using the EAS system

This is pretty typical on TV. Even though WBAP-AM and KSCS-FM in Dallas, Texas (both are LP stations) use EAS for weather, most of the TV stations just scroll text without using EAS. The fact that it's TV may be the reason...

KRLD-AM, which used to be the lead station for EBS in Dallas, doesn't use EAS for weather bulletins. Rather, they use a series of tones (all the same frequency) and then their lead meteorologist (damn did I spell that right?) Brad Barton comes on and relays the information.

>Who could I speak to that would=A0care and help me
>with this? I would appreciate it if you could tell me the title of the

When I see alerts here, the texts runs at the top of the screen, gives the time of day/night, says it is from the EAS, but it's never accompanied by noise. I often see scrolled text to inform of weather problems here. These are usually accompanied by 3 tones of the same frequency, run at the bottom of the screen, and say that they are watches or warnings from the National Weather Service.

Rob, when they issue alerts, it gives the time of day, says in the scrolling that it's from the EAS, but never includes any noise. I do see the other text scroll for weather problems in the area sometimes. They are always accompanied by noise (3 exact same tones) and listed as National Weather Service watches or warnings. They are at the bottom of the screen. The EAS alerts are always run at the top of the screen when I see them. Thank you for suggesting that I speak to someone from my local branch of the FCC. I'll take your advice!!!

> inconvenience yourself just a few moments if it saved ONE life!

If the ``save one life'' argument were true, why are the speed
limits not 5 mph?

What we care about are the odds for one person, not the odds
to the least fortunate one of 300,000,000 people.

What we care about ``scales for population'' as it
should. If the population increases, the level of danger we
care does not increase, but remains unchanged.

This is because it's based on the level to danger to one person,
which we do care about.

It's perceieved on a neighborhood level: how many people are killed
by ... in my neighborhood each year.

The gimmick is of broadcast news is seeking out the bizarre death
and bringing it into _everybody's_ neighborhood, where it is interesting
because it plays on the natural interest in danger ``in my neighborhood.''

That's the hook into the anxiety audience. You have to get them to
miscalculate the danger and then they're hooked on your warnings.

From: contacting2000@hotmail.com
Message-ID: <38cfba9b.2568808@news.iol.ie>
Source record: 20470

Any information please, about companies who will set up quite basic
broadcast studios for short term use.

We Are looking for a company preferably a national one who would, turn
up to a venue for us and set up a small mixing desk, a few CD players
and minidiscs, and a few mikes, and we would hire that for a week.
We are not looking for TX equiptment.

Any advice and suggestions regarding costs or grass root advice would
be greatly appreciated.

Whilst this is predominately an American news group, and advice about
Canada, Australia etc would also be very much appreciated.

Thanks

Paul

>The first person "I" would probably try to talk to, would be a represenative at the local FCC branch office. Anybody else have suggestions?<

Yes. Don't bother with the FCC. The only things the FCC requires are:

1) Transmit one test per week.

2) Receive at least two tests per week.

3) Relay one test per month within 15 minutes.

4) In case of a national emergency, either carry all NE programming live, or go off the air for the duration of the emergency.

Anything over and above that is strictly up to the station. If a station wishes to broadcast emergency weather information, there is nothing in Part 11 of the FCC rules that says they must use EAS protocols.

Hi,

I'm J. J. Jackson. Just recently wrapped up over a decade at WFOX, Atl.

I'm in the process of bringing a system to the US that would mirror desk top for radio.

This would get rid of the dreaded DM-800's, for production. Shortcut systems for air and put sales acctg. , traffic and virtually every other in house system on one plane.

It is revolutionary and sorely needed.

It will make life easier.

Write soon,

J.

>I didn't realize WCRB had a different format before classical.
>What was it?

WCRB's pre-1951 format was mostly popular music and high-school football games, I am told. Dave Tucker, afterwards WCRB's long time program director, was one of the original announcers, as was the late William Pierce, who later became the radio voice of the Boston Symphony Orchestra. Dave MacNeill, the present voice of the B.S.O. and probably the most senior voice on Boston radio today, joined about 1951.

Dave's got a great set of pipes -- I always love listening to him host the
Fourth with the Pops on the Esplanade.

Does he still have a regular shift at WCRB, Ron?

this is not a situation where your ad runs for a few weeks/ months/ and in the case of one ad in this market 25 years!

this is a situation where your voice is being used to brand a station for some time.

You need a contract that says

how long the material may be used for 1 year 2 years 5 years

how much they will pay for the licence

what happens at the end of the term

The number of liners is of no consequence. You would expect to be " on call" for updates on a permanent basis.

Rate: take one Breakfast spot [value is published] multiply by 10 and charge that monthly for the term of the agreement.

This is fair to both parties. they get the update service, you get the ongoings. The size of the market determines the size of the payment.

If they just want you to do some liners which they will never need to replace or up date [how boring] at least they have somewhere to start.

Buyout negotiations could run at 50% with no updates.

1121. Re: 10 minutes worth of commercials!

Newsgroup: rec.radio.broadcasting
Date: 2000-03-16 00:00:00 UTC
From: Robert Jeffares <robert@pnn.org.nz>
Message-ID: <B4F79E8E.2485%robert@pnn.org.nz>
Source record: 20477

one of the problems for radio stations is the price they can get for commercials.

lets say a station needs to get $50,000 a month to pay the bills.

That's about $100 an hour 6am 12 mn

If the market [the buyers] will pay an average $10 per minute that's 10 minutes per hour average and you need to sell all of them.

The reality is most stations CAN'T get the yield out of their advertisers.

in a 40+ station market like DFW the law of supply and demand rules!

Buyers will say they are confused by all the stations coming in with conflicting stories about who's #1 and will experiment with flights on this or that station until they figure out which ones work for their kind of product or service.

Then they screw down the prices of the ones they want to buy by saying "I can buy 30 x a week from KXXX for $6 you want $15 what can you come down to?" Usually a good buyer can shave all the stations he wants to buy by comparing the price offered by a small competitor, which he may never buy. Or buys once to say "I have made this buy at this price"

Result: Everyone has to run heaps of low price ads to cater for the smart buyers. The poor performers drag down the price of the ones who deserve more.

There will be a couple of HOT stations who can ask what they like for spots because they are "in demand" but the flavour of the month title is easily lost for no apparent reason.

National and Multi Station Rep Houses also screw down individual prices giving stations that need to get $10 to break even yields like $2 nett. Often stations don't know it. [This will have a few managers checking their schedule billing reports]

They then run lots more spots or hike the price to locals. Usually there is no option.

Fact is each station has an average audience of about the same number of people. In DFW it's about 75,000 people per station which should give better than $15. You can take out $1m a year at that and have a good programme. The better performing stations in the market can up that 5 x and there may be one doing better.

Over time the radio market will mature, and managers will control inventory so when the game is on the station runs just 2 minutes per hour and when "normal" programming is on they go back to 10 minutes.

Problem is buying in networked programming with fixed windows for ad breaks and trying to run 10 minutes in what amounts to 5 minutes of avails produces absolute crap listening.

Real radio will be back. After this short break!

Robert Jeffares
Auckland
New Zealand

DFW is a market I have studied, as I have tried to learn more about the how and why of radio. DFW is also the home of a company that helps stations deal better with the market. I'll bet few DFW station owners know it exists! I have no connection with any station or company in DFW.

It's Rob, actually, and yes, you can hear him most Saturday evenings at 8
pm when he hosts our weekly live Boston Symphony concerts.

He also does does overnights two days a week on the World Classical
Network, which is on 14 stations coast to coast (the nearest to Boston is
WFCC, Cape Cod).

Source record: 20479

Smallest location with a radio station may be Mount Washington, New Hampshire. WHOM 94.9 is licensed to what is a part time post office in the middle of a tourist attraction.

Mount Washington is the tallest peak in the East, about 5000 feet up. Tourists either drive or take a cog railroad to the top of the mountain, past the tree line. It is said to have some of the worst weather in the U.S. and some small buildings are bolted down with chains around their roofs.

No one actually lives there although for many years the weather observatory has been staffed year round, even though in winter it might be months before you could get up or down from the mountaintop.

At the top of this peak are the towers for Channel 8 WMTW, which is actually licensed to Poland Spring, Maine, about 40 miles away. (Why Poland Spring, I don't know. Only a few hundred people live there, where the mineral water is bottled.) Ch. 8 serves the Portland Maine market although it also covers much of New Hampshire and Northern Vermont as well as the Eastern Townships of Quebec.

94.9 WHOM boasts it has the largest geographic listening area of any North American FM station. Only a few years ago you could hear it from Bangor to Boston and Albany to Montreal, although in the last few years, adjacent channel stations have sprung up blocking its range.

Its studios are in Portland but I'm sure it qualifies as the most listened to US radio station licensed to the smallest community...population in winter 2 or 3.

I recall having (& may still have in a box somewhere) a 45 rpm disc that
was distributed in late 50's by Hallicrafters or National Radio to
encourage shortwave listening (with their radios, of course).
The narration was by Drier, who was then "NBC's Man on the Go,"
interspersed with airchecks of foreign SW programming. I always
enjoyed his commentaries on ABC radio, and also believe he did a
feature called something like "The Good News" which featured
upbeat stories unreported elsewhere.

Of course I knew it was Rob. Sorry for the mis-typing. (And I enjoy your posts on boston-radio-interest, too.)

It's good that he's still on the air. I am sure he's got to be 70-plus now, but it seems like his voice has not diminished a bit. Great to see some class voices still in the business.

1126. Foreign Cities as part of the legal I.D.

Newsgroup: rec.radio.broadcasting
Date: 2000-03-16 00:00:00 UTC
From: steve1reg@aol.com
Message-ID: <20000316201807.03171.00002485@ng-fn1.aol.com>
Source record: 20482

Two US TV stations near Montreal (NBC Ch. 5 WPTZ Plattsburgh NY and CBS Ch.3 WCAX Burlington VT) include Montreal, a foreign city, as part of their legal I.D.

About 10 years ago the FCC stopped requiring stations to get the agency's permission to add cities to their legal I.D. So if you are in East Screwdriver Kansas and put some sort of signal into Kansas City, you can I.D. as KXXX, East Screwdriver-Kansas City.

Since WCAX and WPTZ are carried on cable systems in and around Montreal, (and get a good amount of Canadian advertisers) they include Montreal in their legal I.D.'s. (WPTZ Plattsburgh-North Pole-Burlington-Montreal and WCAX-TV Burlington-Rutland-Plattsburgh-Montreal.)

Do Detroit stations include Windsor in their legal I.D.'s? Northwest Washington stations include Vancouver? San Diego stations include Tijuana?

Message-ID: <20000316205836.02646.00002235@ng-fh1.aol.com>
Source record: 20483

No TV stations include Windsor in their IDs, but some Windsor radio stations include Detroit as part of theirs.

The ones that come to mind, unless they've recently changed IDs while I wasn't looking, are CIMX-FM 88.7, CIDR-FM 93.9 and CKLW-AM 800. CKWW-AM 580 IDs as "CKWW, the Motor Cities....." a takeoff on the classic CKLW Big 8 jingle of the 60s and 70s. All of these stations are owned by the CHUM folks in Toronto.

Interestingly, they focus on traffic and weather conditions as they relate to Detroit. They give the temp in Fahrenheit as opposed to Celsius, and get their traffic info from the suburban Detroit office of Metro Networks.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

The foreign cities are not part of the legal I.D. A legal I.D. consists
of the callsign, immediately followed by the city of licence. In your
example, the legal I.D. is "WPTZ Plattsburgh". After that, the legal
I.D. is over. Montreal comes after the legal I.D.

I don't believe any Detroit stations include Windsor or any Vancouver
stations (larger market) include Washington State. But there's an
independent TV station in Bellingham, WA (KVOS/12) that almost
exclusively targets Vancouver and acts like a Canadian station. The
programming is mainly U.S. syndicated fare but they run the Canadian
version of a company's ads, etc...and heavily advertise on billboards
and bus signs in Vancouver.

SD stations would only include Tijuana in IDs if they were en Espanol.

Similarly, there's nothing stopping a station from IDing with anything they
damn well want. So you could end up with:

WPTZ Plattsburgh-North Pole-Burlington-Montreal-Mexico City-London-Tokyo

if they wanted to.

Reminds me of the sign-on for WEVD/New York when they first moved over to
1050AM with a not quite legal ID. "This is the all new WEVD-AM New York's
greater 1050, serving New York, New Jersey, Connecticut and the world!"

Alot of stations now bury the 'legit"LEGAL ID
in their last stopset before the top of the hour. Then run an image
sweeper at the top of the hour, sort of "posing" as a legal ID. Is it
possible that some may confuse one of these sweepers as a legal ID? My
question is WHEN does the FCC require the legal ID be run? I've heard
statements like, "as close to the top of the hour as current programming
allows". If that's the case think about it. A legal ID can run at :29
for one hour, then two minutes later at :31 for the next hour! Does it
depend on the station? The format? Are there individual agreements with
the FCC on a station by station basis? In other words possible
exceptions? (Obviously sporting events.) What about actual content to be
considered a legal ID? Some say it's whatever you want as long as the
calls are IMMEDIATELY followed by the city the station is licensed to.

The language is quite clear and unambiguous, but since the FCC doesn't
do enforcement any more, stations do whatever the **** the please.
Here is a precise citation (from 47 CFR 73.1201):

(a) When regularly required. Broadcast station identification
announcements shall be made: (1) At the beginning and ending of each
time of operation, and (2) hourly, as close to the hour as feasible, at
a natural break in program offerings. Television broadcast stations may
make these announcements visually or aurally.

(A section in part 74 specifies the analogous rule for translators.)

A right-thinking program director should interpret this rule as
meaning: if *any* programming element is scheduled for the top of the
hour, it must include or be preceded by a legal ID.

My impression is that the most common weasels are the stations which
are ``ashamed'' of their community of license -- e.g., here in the
Boston market, WAAF Worcester (pretends to be a Boston station) and
WXLO Fitchburg (pretends to be a Worcester station). Both stations
bury the legal ID in the :50 stop-set (or even earlier!). (Honestly,
if you're going to ignore the rules, why bother doing a legal ID at
all?)

Poppycock. Never more than a couple of days, at least walking. Now the
road in
winter is different, even for the monster snow-cats. I've walked up
and down several times in winter.

"But there's an independent TV station in Bellingham, WA (KVOS/12) that almost exclusively targets Vancouver and acts like a Canadian station. The programming is mainly U.S. syndicated fare but they run the Canadian version of a company's ads, etc...and heavily advertise on billboards and bus signs in Vancouver."

That station started up back in the 1950s when the CBC -- which then *regulated* broadcasting in Canada as well as operating networks and stations -- only allowed one English-language TV station in each city. According to a TV Guide story in the 1970s, KVOS was a CBS affiliate (at the time of the story) and even ran Canadian PSAs to meet the FCC's PSA guidelines!

Anyone else having trouble with Denon DN-C630 CD players? We had bunch of the Denon 650F players (the white ones) which held up ok, but they seem to have been replaced with the C630's. Once a day or so, they stop in the middle of a track and go back and cue-up at the beginning of the track.

It's happening just barely often enough that I think it's a problem with the decks (if it happened less often with different symptoms, I'd just blame it on dirty/scratched CDs).

Any recommendations for a reliable two-rack-space pro CD player?

I had the same trouble with a pair of mine. The Studer's didn't do
it, so I thought it was the Denon's. Turns out it was happening
about the same time everyday, plus or minus quarter. It was a
swithing transient on the mains when the power load in the building
changed. Put a surge protector on the A/C and the symptom went
away. The tip off was that it happened with all the Denons. And that
it reset to the beginning of the disc. If it were a problem with the
disc, or the deck itself it would skip, or miscue, but wouldn't
reset to the beginning of the track.

I seem to recall before FCC changed the requirements, you could include a second city but only if you put a city grade signal over the 2nd city and included that city in the community issue ascertainment process.

Of course stations found a way to get around this. I remember "WOI-Ames" (the legal ID) "and in Des Moines." (not a part of the ID because of the insertion of "and in") Once the rule changed, it became "WOI-Ames, Des Moines."

There's a station in Omaha that claims their calls (at least they were quoted in the newspaper as saying this) are "ESPN." Their actual calls are KASP and right before the hour, very quickly and almost unintelligibly they say "KASP-Bellevue."

Does any one know the rules concerning TV IDs? I know they can just be video.
KFXA-28 in Cedar Rapids primarily relays KFXB-40 in Dubuque.
Their slide (do they still use slides?) at the top of the hour states...

KFXA FOX-28
KFXB FOX-40

Cedar Rapids-Waterloo
Dubuque-Iowa City

I guess all the info is there, but probably not in the proper order.

WFAA-TV usually justs shows the ID as a graphic which is perfectly legal. Our ID's tend to promote newscasts...."Big Light in Sky to Appear in East, tonight on News 8" would be the VO, talent is on camera and in a very small typeface would be the WFAA-TV Dallas, Fort Worth. The point size of the type can be small....but it must be readable.

But we do have a standard aural and visual ID.....logo graphic with audio giving the true ID, "This is WFAA-TV, Dallas-Fort Worth." Look for it during the soaps and on weekends.

Does anyone have access to old 1960s and 1970s arbitron ratings? I know that Arbitron has been rating markets since 1967 (first was #1-NYC, I believe), it would be great to see how well some of our favorite top 40 radio stations performed in their respective markets. Remember when 77-WABC was #1 in New York City? Or when KHJ was #1 in Los Angeles in the mid-1970s? Or when WRKO was #1 in Boston for several years?

Cheers,
MIKE

>ID at :50 after as "WKTU lxs-NEW YORK CITY". The "Lake Success" part is
>completely unintelligible.

Then there's "The Nerve - 95.1/95.5" in Rochester, New York.

First they identify the repeater at 95.5 as W238AB, Rochester. This is
the correct ID; the repeater's COL is Rochester.

Then the main station is ID'd as WNVE, Cooperstown/Rochester.
The COL is *not* Rochester, and Cooperstown is a full two and a half
hours southeast of Rochester, and the COL is not Cooperstown either.
FCC says WNVE is licensed to South Bristol Twp., NY

Northeast Radio Watcher Scott Fybush has told me that there is a very quiet
Legal ID inserted somewhere near the top of the hour, but I've *never* heard
it.

Subject: Alan Freed Special on the Rock-it -- New show #148

Hello Everyone,

Well the Iditarod Sled dog race is over and we are once again able to bring you some new Oldies programming here on the Rock-it.
We have new programs in line waiting and first off we have show #148--Lane Quigley and the Memory Lane show has done a great job in this special broadcast of Alan Freed's 1959 Easter Jubilee Show from the Brooklyn Parmount.
Here is the description:

This Memory Lane Show was conceived and researched by Utah listener Rich Kuchinsky. Rich grew up in New York, and attended the Alan Freed Easter Jubilee Stage Show during Spring Break, 1959. Not only that, he saved the program!

To celebrate the 41st Anniversary of Alan Freed's final New York Stage Show, host Lane Quigley re-creates that show by presenting each act performing their songs of the day. This show had a variety of popular (and hopeful) performers, typical of the Top 40 charts of the day. Grab some popcorn and a soda pop, and pretend you are at the Brooklyn Paramount, April 1959:

ALAN FREED ROCK & ROLL ORCHESTRA
Pushin'
JOE MEDLIN
I Kneel At Your Throne
THE SKYLINERS
Since I Don't Have You
BOBBY FREEMAN
Do You Wanna Dance
THE CADILLACS
Speedo (Live)

free at http://www.real.com
~~~~~~

We are happy to report that thanks to Damaged79 -- Mike out there we
are now a even 600 members in the Rock-it Radio listeners club. Remember
we try to fill requests and dedications so e mail us at the station and we
will do our best to get them filled on the next show.

We have some new shows that will be coming up pretty quick. Harry Hepcat
has been kind enough to send us some more shows so we will be featuring
some of his great oldies shows and myself will also be featuring a couple
newer shows including some feature tracks of some modern rockabilly out
there and the latest CD's from Mack Stevens and
The Bourbonaires both excellent Rockabilly performers all coming up
within hopefully this week on the Rock-it. So, if you haven't heard some
~~~~~~

of the earlier recordings in our archives page -- and want too :)
hurry because they will be going quick!

All the rockin best,

Bennie Dingo

1151. Sacred World Music

Newsgroup: rec.radio.broadcasting
Date: 2000-03-18 00:00:00 UTC
From: Richard Mauro - Sacred World Music <world@oneimage.com>
Message-ID: <200003180321.UAA10131@mail1.oneimage.com>
Source record: 20357

Hi:

Wilhelm Andreas Eilertsen mentioned that I could tell a little about what I am trying to do on rec.radio.broadcasting.

I host and produce an syndicated eclectic radio program. I'm looking for more stations to carry the program. Currently, the program is carried on WLQE - WLVA (Lynchburg, Virginia, USA), KFRF (Fresno, CA, USA) and on 3BBR, and 2NBC in Australia. It is also heard on line.

Sacred World Music is a diverse and eclectic hour segment (55 minutes), featuring new music from genres such as world, new age, Celtic, folk, Native American, space, ambient, classical and lots more in a well thought out and tasteful mix. I provide the program FREE of charge.

I would be glad to send a sample of the program to the station manager, program director, or music director.

You can also learn more about the program at the web site noted below.

I look forward to hearing from you.

Sincerely,

Richard Mauro

Probably not a record, but the village of Shingletown, CA, with probably about 20 permanent residents, is city of license for two full-power FM stations. It's located on CA Route 44, halfway between Lassen Nat'l Park and the city of Redding. Must have commanding service areas because of their elevation in Sierra foothills==Ted Shireman

What city do you live in? I'm ready to move.

Let's see. I've been in a few. Belvidere, Illinois 1967 (23 dead, hit high school, I was a Junior); Moline, Illinois, mid-70s, 1/2 mile away; Madison, Wisconsin, early 80s, overhead, no touchdown; Tulsa, Oklahoma, 2 in 1975, 2 miles away and 6 miles; 2 in Madison again in mid-90s, both about 2 miles away. We had no warning in Belvidere and it happened just a few minutes after school let out. Oh, if we would have had Doppler then, even if it did form almost on our doorstep.

This is why I now have scanners, weather radio, shortwave radios, good AM DX radio and bookmarks to live Doppler. The media do go nuts, but it alerts me to find my own information and decide whether to hide, run or laugh. Maybe they think they're being of service; but they're crying wolf so often, people seem to be starting to ignore real storms.

1163. A Different Kind Of Oldies Show Update - 3/18/00

Newsgroup: rec.radio.broadcasting
Date: 2000-03-19 00:00:00 UTC
From: Steve Coletti <bigsteve@dorsai.org>
Message-ID: <001c01bf91a4$81510d60$a5ccfea9@compaq>
Source record: 20369

TESTING, TESTING - We have now started a STEREO stream of the program on live365.com. Open http://166.90.143.149:9056 in your MP3 audio player. We are still using a bit rate comparable for a 33.6K connection so the fidelity will suffer. The reason we keep the rate low is because even those of us who get "good" connections with a 56K modem will get stuttering and jumping when the net starts to get congested or noise on the line degrades performance. What I DO need is feedback on both streams. The mono is also at 33K so it has some fidelity too it. If you have connection problems and would like us to lower it to say 28.8K please let me know it. If you would like the stereo feed to be 56K, then let me know.

Audio CD's of previous programs are now available for $6. each to US & Canada. I haven't figured out any international price yet, but overseas air mail will probably cost more than twice that amount. All CD's are custom burnt in on demand. Pick out the show(s) you would like to order from the master list; http://wbcq.net/bigsteve.html and then make out your check or money order for $6.00 each, (US funds on a US bank, for those from overseas), to WBCQ and send it to me @ Steve Coletti, P.O. Box 396, New York, NY 10002.

CD-ROMS of the show are still up in the air right now due to the work involved. Right now we have old programs in two MP3 formats, neither of which are in "CD Quality". The 40kbs @ 22kHz stereo format, (or when the show was only mastered in mono, the 32kbs @ 22kHz format) that we used to post up on the newsgroups. We also have the 24kbs @ 22Khz monos we stream on live365.com. I really have to make a decision as to either keep the old archive format or redo them in a better sound format. Send me feedback on this.

Programs we recorded in advance have been used up and all aired so it's time to get back into production. We're trying to put one together on TV, the themes and the inspired songs, (i.e. Sock It To Me).

I will also be recording some of the oldies shows currently available on the net. If you do a show I know about, I will be contacting you about permission to use some "net checks". If you do a show I don't know about, e-mail me. Just remember I will be looking for a substitute host for a week or three this summer. This could be your chance to get on a 50,000 watt international station for free! I'm primarily looking for shows done for listeners on the net only. These can be either streaming or archived, (on demand), shows in almost any format.

I'm also looking into a second program on oldies shows heard on broadcast stations that are on the net as well. Due to legalities on this, this will take some time to produce. Look for the first two ideas in April.

We're running out of program ideas so we will be doing more assorted oldies
shows. Something on the line of original Top 40 radio of the 60's.
Hopefully we'll be able to bring back some of our old departments.

-Steve

Mike Gallant was looking for "old 1960s and 1970s Arbitron ratings"
concerning one-time Top 40 giants like WABC, KHJ and WRKO.

Although the American Research Bureau, the former name of the current day
Arbitron Company, dates back to 1949, it didn't have the near unanimous
acceptance it does today until the 70's. Prior to that era, many legendary
Top 40 stellar ratings reputations may have been based on shares reported by
Pulse, Hooper or Trendex -- companies whose methods and results were
substantially different.

Widen your search. Then be careful about comparing the figures.

I just wanted to congratulate the upper management at the ZONE in sacramento for hiring this Rick Chase guy. He has transformed what used to be a station full of boring "minimum wage liner card readers" into a fun, big city sounding station. I'd never heard of Rick before, and was unaware of his many years at KMEL. But he is now clearly the BEST jock in the sacramento area, and at a station that I never thought would take the risks.....so thanks to the zone, and thanks to Rick Chase for bringing big city radio into a little place like sacramento :)

Anyone else like or dislike this guy?

>FCC says WNVE is licensed to South Bristol Twp., NY

>Northeast Radio Watcher Scott Fybush has told me that there is a very quiet
>Legal ID inserted somewhere near the top of the hour, but I've *never* heard
>it.

Actually, that's *not* exactly what I told Steve. WNVE has never used "Cooperstown" as part of an ID, legal or otherwise -- why would it, since the signal doesn't reach Cooperstown, a good three hours' drive from Rochester?

I think Steve may have misheard an earlier ID in which "South Bristol" was mumbled quickly.

In any event, WNVE hasn't used "South Bristol" (the "Township" part was never used in the legal) as its city of license for more than a year. A rulemaking moved the 95.1 allocation to Honeoye Falls, trading it for the 107.3A that was in Honeoye Falls (and enabling the 95.1 transmitter to be moved much closer to the city), and although the transmitter move has yet to happen, the top-hour ID (and it always runs somewhere between :59 and :01 except during Stern) has included a pretty unambiguous "WNVE Honeoye Falls Rochester" in it.

Say what you will about Clear Channel/Rochester (and I could say plenty), but they're honest about their legal IDs.

John Rethorst asked...
>Is there still a free web source for some of the current Arbitron data?<

Various media sources publish what are called "Top Line" 12+ numbers, for the
whole audience over the entire week for commercial stations only. Remember that such numbers are not always a reliable gauge of profitability.

The most comprehensive site I know is Radio & Records, whose tables for every rated market date back to the same season in the previous year at
http://www.rronline.com/Ratings/RatMain.asp

To see 12+/full-week figures for any of the 74 US markets covered by Radio Digest, follow the link trail from "United States" in the left hand column at
http://www.radiodigest.com/

Individual markets' monthly trend info is available free to members of All Access & Friday Morning Quarterback.

Analysis of nationwide demographic appeal (not attributable to individual stations or markets) is available online from the major rep firms, and Arbitron itself.

Mike, the information you're looking for will take some researching through old trade papers, but it's there.
If you have access to a really good library you can research Arbitrons back to about 1973-74, through old editions of the Radio and Records ratings annual. (I keep them back to 1993 myself, but I suspect you want to go a lot further back than that.) Before that, you'll also find it useful to look in the annual radio special edition of Broadcasting Magazine, which used to tally the top 10 stations by AQH after the spring book every year, as far back as I can remember (1969-70). And Billboard Magazine would also report on the top stations all during the 1960s and 70s (they still do today).
A lot of the trade papers (Billboard, Cash Box, etc.) also would cover Pulse and later Birch/Scarborough ratings reports. Even Nielsen was in the radio ratings game for a while, although they dropped out, I believe before 1970. If you can get back issues of them you'll find quarterly information on all the larger markets.

From 'Scott D Fybush':

>>Northeast Radio Watcher Scott Fybush has told me that there is a very quiet
>>Legal ID inserted somewhere near the top of the hour, but I've *never* heard
>>it.
>
>Actually, that's *not* exactly what I told Steve.

You didn't say anything about Cooperstown being part of the ID, no. You had mentioned that there IS a *legal* ID mentioned somewhere near the top of the hour, that's all.

>WNVE has never
>used "Cooperstown" as part of an ID, legal or otherwise

Perhaps I'm hearing it wrong, but it sure sounds to me like "Cooperstown/ Rochester" whenever I'm listening. Or, at least, it did the last few times I drove through, and I drove through or into ROchester at least once or twice a year between 1996 and 1998.

>I think Steve may have misheard an earlier ID in which "South
>Bristol" was mumbled quickly.

The comment I referred to that you made was about the legal ID (South Bristol).

>In any event, WNVE hasn't used "South Bristol" (the "Township" part
>was never used in the legal) as its city of license for more than
>a year. A rulemaking moved the 95.1 allocation to Honeoye Falls,
>trading it for the 107.3A that was in Honeoye Falls (and enabling
>the 95.1 transmitter to be moved much closer to the city), and
>although the transmitter move has yet to happen, the top-hour ID
>(and it always runs somewhere between :59 and :01 except during
>Stern) has included a pretty unambiguous "WNVE Honeoye Falls
>Rochester" in it.

Well, I take the Southern Tier Expressway through Binghamton, and up to Albany, when I go to Boston now. Due to horrendous traffic in Buffalo, I don't take the Thruway unless I am driving to Niagara Falls, Toronto or a city that lies on the Thruway. So I don't drive through Rochester much anymore. Last time I did was 1998, so my information is old.

But I swear that when I used to drive through there, their pseudo-ID was "WNVE, Cooperstown/Rochester." I wasn't hearing things. And "Cooperstown" doesn't sound like "South Bristol." And it definitely doesn't sound like "Honeoye Falls." (How do you pronounce that, anyhow?)

BTW, I remember reading about the flip between 107.3 and 95.1 here.

It should be noted, though, that the FCC Web site still says WNVE's city of license is South Bristol.

>Say what you will about Clear Channel/Rochester (and I could say
>plenty), but they're honest about their legal IDs.

Who owned the station in 1998?

Given your given return email address, it's hard to tell if this is a serious question or not.

But given the deplorable lack of knowledge of basic economic concepts I've continually encountered, I wouldn't be surprised if you were actually confused ...

"Non-commercial" by the FCC definition means you can't run "commercials", though "underwriting" may be run instead. While these increasingly sound just like commercials, you still can't say things like, "catch the big sale today at Big Joes!" or "shop at Big Joes because they have the best selection in town!". The FCC website explains this at some length, if you really want to understand the distinction.

"Non-profit" means exactly whats it says: NO PROFITS. That's the money left over after you pay normal business expenses, like salaries, etc. While it's true that non-profits can pay high salaries (some do, some don't), they can't split any money at the end of the year, like a profit-making entity can. If Joe Schmoe, owner of Big Joes, has money left over at the end of the year after paying his business expenses (including his salary), he pockets the extra as profits. Maybe buys a boat, takes a nice vacation, etc.

But a non-profit that has a good year, with money left over after expenses (again including salaries), has to plow it back into operations, like maybe buying new equipment, but NOT paying bonuses to employees (of course, that's a pure interpretation).

And what in the world makes you think Pacifica is "making money"!?!?!? Had their board not been so obsessed with increasing revenue over expenses, all the silliness of the past year would never have occurred. It was all tied to their concern they won't continue to cover expenses into the future, which incidentally, is a common obsession of non-profit radio stations these days.

Hi Folks,

We're thinking about replacing our cart machines with some digital technology.

We are a college station with a dedicated listenership in the Boston Metro market. We are building two new studios and when we're done, we'll have two main On-Air studios and a production room. We want to keep the cart machine interface as much as possible (console fader starts). We have very limited counter space, although we have 3 or 4 available rack-spaces in each studio. We'd like to be able to record sound clips (PSA's, show promos, drop-ins, beds, ID's, etc.) in the production room and have access to all of the available clips in both on-air rooms.

The only two products that I can see using are the 360 Systems Digicart II Plus, and the Arrakis Systems Digilink IV. Does anyone have any experience using these products and would you like to share some anectodes? I'm mostly interested in reliability/customer-service/ease-of-use issues.

Thanks in advance for any help you can offer!

One example is WTOP, which has two streaming audio sites:

wtopnews.com which is the air audio [news/weather/traffic]

wtop2.com which is a more serious mix of AP network news, local stuff,
and press conferences / congressional hearings, etc.

They have one or more people work on the sites in addition to their air
work on WTOP. I don't know the size of the station's total staff, but
I'd guess around 50.

I've found Digi-Carts to be reliable and easy to use. Customer service has been quite good. We used them on the air for three years prior to 1996 when we installed Scott Systems, and still use them in several production studios. WHRB is still using a Digi-Cart.

Arrakis I've had no personal experience with, but some affiliates of our network use it.

If you've got a little level to spare at the source, you can make up a simple pad with resistors and the balanced end will hardly know the difference.

Just put a resistance across the source equal to it's impedance, then a 10k resister on each leg across the balanced destination. The destination will like it even better if you put a resister equal to it's impedance across that end. Again, there are losses, so you must have enough level to pull it off.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

1201. Re: Digilink vs. Digicart!

Newsgroup: rec.radio.broadcasting
Date: 2000-03-21 00:00:00 UTC
From: RobBass2@aol.com
Message-ID: <c5.31dd2b0.26086dcd@aol.com>
Source record: 20407

theodric@mit.edu (Theodric Young) asked about Digilink vs. Digicart...

As an employe of a station that has Digilink 3 and the original Digicarts, I can tell you from experience how the two systems compare.

For starters, if you want spots to be available in all studios at all times, you're probably better off using Digilink. You can have the same spots on all rooms on Digicart, but on the original Digicarts you had to dump files to a disk and carry them around from room to room to copy to the hard drive. I'm not familiar with Digicart II's so I don't know if those are networkable or not.

Digilink is a network...

But there are plenty of other cart replacement systems out there such as Scott Systems, RCS, UDS, Audiovault, etc... So shop around before you make a decision.

As was pointed out to me in email, I goofed in my recollection of where Lake Success NY is. It is indeed on the Nassau County side of the border with Queens (NYC) NY. I distinctly remember looking it up years ago, but either

a) It moved (highly unlikely) or
b) I misremembered (quite likely)

My apologies.

As someone who has worked at WOI for forty years and served for twenty-five
as manager, I can tell you that the above-mentioned "and in Des Moines"
business never, ever happened unless it was an unauthorized excursion by a
late night or weekend operator/announcer. I know for certain that such an
ID form was never authorized as it would have have to have been authorized
(at any time after 1960) by me. And I didn't do it. Not that any of this
matters ;-). The first time the city of Des Moines was ever mentioned in
any way in connection with an ID was when "Ames and Des Moines" was
authorized by the FCC when the rules were changed..

A great example of people ignoring the information of coming storms can be related here in Eastern NC during the hurricane season. The chances of N.C. to experience the flooding on the scale that occured during Hurricane Floyd last year are probably that it will not happen again for another 500 years. But, who is to say that the mathematical odds will always be right? The point is this, whether or not you feel that the media is always crying wolf,there is always going to be a time that the media will get the something right on target like the Hurricane Floyd event. True some people died...less than a 100 if my memory serves me right,but thousands of lives were saved because people once again took the media seriously.Maybe those that died were the ones that sat back and said.."yeah right..another storm...hey the sun is gonna shine...blah blah blah" I always say...best to be safe than sorry. If you cant stand the media hype...turn off your radio and tv's..sit next to your little oil lamp..read your paper..then wonder why your house is blowing or floating away...with YOU in it.

Don,

It probably was on the weekend, that's about the only time I ever get a chance
to listen to WOI-AM, but I definately remember hearing it and remarking that it
was (as far as I know) a way to get Des Moines close to but not part of the
legal ID.
Of course, what I heard may not have actually been logged as the legal ID.
Most likely during the Ed Busch talk show you used to run.

I believe KEZT 104.1 in Ames used to have some sort of a legal ID that included
Des Moines, like "Ames, serving Des Moines and all of central Iowa."

Recently, I thought I heard an ID for WOI and KTPR. Is that now a partial
simulecast or owned by ISU? During the Sunday airing of Prairie Home Companion,
I believe.

At least in the past, 1060 KYW in Philadelphia used to have an elaborate hourly ID ending with "...KYW Philadelphia, serving Pennsylvania, New Jersey, and Delaware". And before they dropped their AM Stereo, they used to add "...in AM Stereo" on the end of that.

1212. Radio Schools: There ARE Good Ones

Newsgroup: rec.radio.broadcasting
Date: 2000-03-22 00:00:00 UTC
From: info@miamiradioschool.com
Message-ID: <8b35qd$p01$2@slb1.atl.mindspring.net>
Source record: 20418

If you're looking to learn radio, there are good schools out there, but you need to look for them. A good place to check is the Broadcast Education Association, but they mostly list college and university programs.

You can also check out the radio broadcasting program that is operated through the adult and vocational education arm of Miami-Dade County Public Schools at the Miami Lakes Technical Education Center. It has been in operation for 25 years, is fully accredited with the State of Florida Department of Education and the Council on Education, which means finnancial aid is available to qualified applicants (not just government loans).

The school teaches three major areas: on-air music show hosting, radio news preparation and presentation, and radio production. There are 11 studios, 5 production, 4 on-air, and 2 news. All the equipment is real radio equipment, not home audio equipment. Pacific Research consoles, Otari tape decks, 360 Systems ShortCut digital editors and Instant Replay digital storage units, Denon DN-950 CD players, ITC cart machines, Korg Soundlink 8-track digital studio and much more. Learn everything from recording to carts, splicing tape, to digital 2-track editing to analog multi-track recording to digital multi-tracking.

It's a one-year program, 8:30 am to 2:10 pm, Monday through Friday. That is three trimesters, four months long each. Current tuition is $424.00 per trimester (plus a $1.00 per trimester student ID fee). Add in about $250.00 total for all the books and materials you'll need. Total cost for the entire program: approximately $1,700.00 for the entire year, including books and materials.

Class size is limithed to a maximum of 20 students. Check with our grads (names and stations listed at our website). Call any radio station in the Miami-Ft. Lauderdale market and ask them about us.

Oh, yeah, and the students produce a daily 2-hour NAC/Jazz show on the local public radio station, WLRN-FM. 100kW stereo, with three repeater stations down through the Florida Keys. It's the largest signal n South Florida, reaching from Key West to the north end of Palm Beach County.

It's not exactly small, but I believe that Angola Penitentiary in
Louisiana has its own licensed broadcast station to serve the inmates and
the staff and their families.

Non commercial should mean no commercials. If you're going to trade
you have to have something of value. If you can't give the trading
partner something resembling a spot, why would he want to trade?

>The Red Croos is "non-profit" Elizabeth Dole had a six figure salary.

Its still a business that requires management. If you want good
management you have to pay competitive salaries. I also think
Elizabeth Dole brings a name to the party that inspires people to
donate. Probably worth every penny she makes in the size an number of
donations she's responsible for.

A CBS affiliate, acting like a Canadian station?!?!?

I didn't know the station went back that far. I was under the
impression that it was a recent thing. (I'll be up in the area next
month, so maybe I'll pay 'em a visit.)

I sort of recall that the Pembina station was Gordon McLendon's foray into
TV. When the Canadian government legislated to disallow ad expenditures on
US stations, I was under the impression the station either went dark or
became a satellite to a Fargo station. Anyone recall?

I believe KVOS-TV goes back to 1954, when they were called "The Peace Arch Station", along with their AM sister. I guess the Peach Arch is a landmark in Bellingham. When the TV station started they were a primary affiliate of CBS and a secondary for ABC. The station became independent several years ago.

>audio.

Do they still make those? Haven't seen one in years...how much
do they hold per disc, and what do they retail?

Another similar option -- perhaps cheaper? -- is the Denon MD deck. It
looks like the 950/960 series, but it takes Minidiscs. If your DJs are
used to the the CD-cart style players, it might be useful.

As I wrote you, the Digicart's a great deck, but pretty inconvenient when
you have more than one studio.

Is this also true of non-commercial FMs above 91.9? There's a 100kw FM in Omaha
on 100.7 owned by a bible college that runs non-commercial, except there are
actual commercials during traffic reports (probably bartered by Shadow Traffic
or whoever offers the service in Omaha.) I know non-coms above 92 have been
sold and become commercial, but were they ever actually licensed as a
non-commercial?

1953, to be exact. From their own Web page at
http://www.ackerley.com/broadcast/tv/kvostv12.html

KVOS TV12 is something special, unique in all of North America.
TV12 is a "border broadcaster", We are licensed by the Federal
Communications Commission and operate from facilities in the NW
corner of Washington State. We serve an international audience, which
is primarily the heavily populated Lower Mainland of British Columbia
and Vancouver Island. Our viewing area stretches along the
Interstate-5 corridor north of Seattle, up to the Canadian border and
into the interior of British Columbia as well as west to the Olympic
Peninsula and Vancouver Island, and east to the Cascade Mountain
range. Our primary audience is Vancouver, British Columbia, the third
largest city in Canada with a metro population of 2 million people.

When TV12 signed on the air on June 3, 1953, we were the very first
television station - U.S. or Canadian - to broadcast into the greater
Vancouver/Victoria B.C. market. In 1985, KVOS TV12 became one of the
original members of the Ackerley Broadcast Group.

Since its first day on the air, KVOS TV12 has offered a strong
programming line-up, always striving to be an "entertainment
alternative" to U.S. and Canadian network programming. As an
independent TV station, not affiliated with any network, TV12 has
successfully offered Canadian and U.S. viewers the very best in
off-network and syndicated programming. Over the years,
TV12 has been especially successful serving the viewing needs and
interests of families with young children.

Serving viewers means more than simply buying shows. It also means
producing top-quality local programming. KVOS TV12 does that every
day. "Newsview", offers NW Washington its only local daily television
news report. "Dave Chalk's Computer Show", a co-production of TV12, is
seen on most of the Ackerley Broadcast Group stations, as well as the
Global Network in Canada and onboard most Canadian Airlines flights.
"Weatherview Now" is an hourly feature on TV12. Viewers throughout our
area have come to depend on the accurate forecasts offered by our
Weatherview staff. TV12 has recently joined forces with Insurance

Corporation British Columbia (ICBC) and local Autoplan Brokers to create "TV12 Roadsense", a series of 60-second spots designed to teach teens and young adults to use their "Roadsense" when operating a motor vehicle.

I hope KVOS doesn't mind...it looks like station PR stuff, so I figure it's OK to repost ;)

Indeed they did. They jumbled around the CBS schedule quite a bit, moving a lot of shows into different time periods, or even on different days. They also had a pretty minimal news presence, running only five or ten minutes of local news before the CBS evening news, and running sitcom reruns at 11 PM instead of local news. At least that's what they were doing in the mid to late seventies -- I lived in Tacoma at the time, and could occasionally receive the station (and, of course, saw its programming listings in TV Guide).

> I didn't know the station went back that far. I was under the

I think that it did sign on in the late fifties, but in any event, I know they go back at least as far as 1974, since I remember seeing the listings and receiving the station after 1974.

There was an interesting operation in the other direction in Windsor through 1970, with CKLW-TV channel 9 operating as an American station, an independent for Detroit. (no network affiliation though. That had to be reserved for XETV in Tijuana<g>)

Today, I'm hard-pressed to think of any Canadian stations, except for the four commonly-owned outlets in Windsor, that go out of their way to cover a U.S. market. Of course, there are plenty with incidential coverage. Strangely enough, there are a handful of low-power TV "translator" stations in Montana and Washington which rebroadcast Canadian outlets. (and now, one in San Diego which rebroadcasts a Mexican station - which in turn carries a U.S. network - which programs for immigrants of Mexican heritage!)

> I didn't know the station went back that far. I was under the

KVOS went on the air in May of 1953. Indeed, it predates all but two of the Seattle stations.

True, probably a unique institution to hold a broadcast license. (I guess it proves that the "have you ever been convicted..." blank in the application form doesn't automatically disqualify you if you answer "yes"<G>!) However, the station's city-of-license is the city of Angola (not the prison).

My understanding of "non-commercial" is no actual spots, but there can be "promotional supporters"...top of the hour mentions of sponsors/supporters.

In that vein, there can be no call to action, such as "we're the best" or "call us at 555-5555". But there can be announcements like "Programming on WXYZ is supported by Joe's Pizza Joint in Downtown"

So if that were the case, then a station could technically trade "promotional mentions" in exchange for product or service, right?

Wow, when was the last time the term "booth announcer" was used? I love the term "audio follow." It is so personal. The booth announcers of yesteryear would read commercials live, fill during those pauses when the projectionist forgot to thread the last reel of the late show and give time checks on station breaks. The Bill Pierce types now can their tracks for several stations.

1233. Need talk radio audience figures

Newsgroup: rec.radio.broadcasting
Date: 2000-03-23 00:00:00 UTC
From: Anthony Torres <anthony@tir.com>
Message-ID: <EKgC4.4386$6S3.897303@tw11.nn.bcandid.com>
Source record: 20434
Cross-posted to: rec.radio.broadcasting,alt.radio.talk

Can anyone tell me where on the net I could find figures for the total listenership of the top 10 or 20 syndicated radio talk shows in the U.S.? I've seen lists here and there, but preferably, I'd like to see some figures going back several quarters. I know Talkers magazine has a list, but AFAIK, it's not on line. Can anyone help???

Anthony

A group of friends were visiting their buddy who had a big-time job at
WTOP-AM/FM/TV way long ago. "Sorry, but I have to make an
announcement", and away he went. The announcememnt was "Channel Nine",
which became his nickname for a while.

WMC-FM (and a fair number of other stations) are "grandfathered", having been on the air with higher powers before something similar to the current regulations were adopted in the early 1960s.

There's a list on my web page (see the signature) under "Superpower FM stations".

Canadian stations are only required to ID once a *day*. (today. I'm
assuming the same regulation was in place then)

>It helped being big I guess.

Canadian stations aren't required to do legal ID's like American stations are, are they?

CIDR 93.9 has been ID'ing itself as "93.9 the River, Windsor/Detroit." No callsign - which would be illegal in the U.S. But they're not in the U.S. and not licensed by the FCC.

Of course there can. Our local so-called noncommercial station, WILL,
has ads that say "our phone number is in the yellow pages". They have
actual adds that advertise products as such, period, no quibble.

"Pies by Inge" is getting very irritationg.

They are now airing commercials that are so long that they have to talk
at twice
speed to get all the words in!

I had asked this question some months ago (just before Bill's death)
related to this issue:

Does anyone have a copy of the OTHER version of "Tomorrow Radio" which was
called "Tomorrow Media"? It was a two LP (remember those?) and was an
extremely elaborate production.
I'd be willing to buy a copy... trade for a copy... or anything else
(within reason)!
I'm actually looking for a good, professionally dubbed or original copy. Any
help in locating one would be must graciously appreciated!

Be aware that "listing" the underwriters' phone number is not a call for action and is thus not illegal under the non-commercial underwriting announcement rules. "More information is available at 800-262-0640" is _not_ a violation." "Call 800-262-0640 and order a pie today" is a violation.

Frankly, my irritation at underwriting rises highest when I'm watching a PBS program. God, it seems that sometimes the first three minutes of the show is solid "enhanced" underwriting.

Anyway, only because WILL (an AM station) was mentioned, will I mention that there is no such thing as a non-commercial AM license. Whether WILL, WOI, WHA, WOSU, WKAR and the few other AM public radio stations operate commercially or not is up to them. They can literally turn on a dime from non-commercial to commercial. (although to my knowledge none has). If a change were made, they might want to drop a courtesy note to the FCC but that'd be about it. The rules regarding commercials (the lack of them) that apply to stations operating in the 88-92 mHz non-commercial reserved section of the FM band where most of the public stations operate do not apply to the WILLs of this world.

The Fidelipac DCR-1000. Records copmressed digital audio onto standard
floppy disks. Sound quality is better than MP3 but not as good as CD
audio.

There was a similar situation in the small border town of Pembina, North Dakota, in the 1970s. KCND 12 was an ABC affiliate serving Winnipeg. In the late 70s or early 80s, Izzy Asper (a Winnipeger who now owns the Global Television Network here in Canada) bought the station, moved it to Winnipeg, changed it to channel 9, and the calls became CKND.

Doug...

Windsor's Channel 9 was owned by RKO General during its CKLW-TV days. I don't remember exactly what year it was, but the CBC bought the station and flipped the calls to CBET. During the budget cuts of 1990, the station's local news was axed, much to the dismay of Windsorites - and many of us on this side of the Detroit River. It has since been resumed in the traditional early and late evening time periods.

It is today a Fox affiliate, a satellite of KVRR channel 15 Fargo.
That's a different facility from the KCND operation though, it only
dates back to 1985. I'm told that the new station that began operation
in 1986 on channel 13 in Winnipeg has caused KVRR a lot of difficulty in
off-air reception, not that anyone in Canada watches that way these
days<g>. I have also heard tell the property the KNRR tower is on is
right on the border - that one of the guy wire anchors is within a few
feet of Canada.

My understanding is that Canadian firms are not proscribed from
advertising on U.S. stations, but that they can't deduct those
advertising expenditures from their taxes.

Date: 2000-03-24 00:00:00 UTC
From: rnewman@thecia.net
Message-ID: <rnewman-2403001048420001@ppp39-225.thecia.net>
Source record: 20261

The Boston Globe ran this article about WBZ-AM's David Brudnoy on yesterday's Living/Arts section front page. I am reposting it here with permission from the correspondent, Clea Simon.

TO BRUDNOY, CALLERS KEY TO ERUDITE TONE

IN 25TH YEAR ON AIR, ISSUES STILL ENTHUSE

By Clea Simon, Boston Globe Correspondent
Date: 03/23/2000
Page: C1
Section: Living

Tuning into "The David Brudnoy Show" weeknights on WBZ-AM (1030) is tuning into a national conversation. Thanks to the properties that allow AM frequencies to travel great distances at night, the Boston-based host leads listeners in 38 states in the kind of intelligent discussion that isn't often heard on talk radio. Topics can range from the rough and tumble of politics to the subtleties of religious doctrine. While the discourse remains elevated and the tone erudite, the talk never slips into intellectual exclusivity. This is smart talk for everyone. As he heads into his 25th year on the airwaves, Brudnoy says the key to such accessibility is in the collaboration between himself and his audience during the 7-10 p.m. show.

The people who call in are the major part of the equation. "I learn from the people who call," says Brudnoy, 59, whose broadcast career began at the now-defunct WHDH-AM in the summer of 1975. "I don't have children, and I learn about the problems families face from the people who call. I learn about divorce, about the raw deals divorced fathers can get."

Callers are integral to the show's charm. Brudnoy is always encouraging first-time callers, and he's quick to chide those who, from time to time, seem part of or-ganized campaigns that attempt to flood the show with one political viewpoint.

But nuts and novices are secondary, in a way, to the dozen or so regulars who phone in once a week, which is the most they're allowed. Brudnoy describes "Immy" from the North Shore, for example, as "a sparkling, gutsy woman of a certain age," and "Bill, from Sudbury, who dislikes everybody."

"They give the program a sense of family," says Brudnoy. "I don't have a foil like Robin Quivers is for Howard Stern, so the role of sidekick isn't played by an individual but by a rotating band of individuals."

If the callers make up half the show, the other side of the equation is the Brandeis, Harvard, and Yale-educated host. Despite a battle with AIDS that had him near death in 1994, the 'BZ host still does as much, if not more preparatory work for his show than many other professionals on the air. The health crisis kept him off the air for 10 weeks, but when he returned he came back to the marathon Monday through Friday, 7 p.m.-midnight shift. Last spring, he cut his air time back to three hours, citing fatigue. However, he says his disease remains in check, his viral count so low as to be imperceptible.

Reducing the hours made sense, he explains, because decreasing the amount of the work he puts into each program was never an option. Although he has a full-time producer, Brudnoy is the one who ultimately chooses his guests and gets to know their work. When he has authors on the program - as he does several times a week - he reads their books.

"A producer or an assistant can read a book for you and write out bullet points" with the book's highlights, he explains. Such shortcuts have become increasingly common in the industry. But when interviewing authors such as The New Yorker's Dr. Jerome Groopman or Ward Connerly of "Creating Equal," Brudnoy sees no substitute for doing his own homework.

"The host has to read the book," he says, "because the texture of the book won't come across in bullet points. The payoff is in the level of conversation and the detail in which a work can be discussed.

"I hope what's communicated is my enthusiasm for the subject," Brudnoy says.

Through the years, that enthusiasm hasn't lagged. "One of the wonderful things about this job is I get to talk to the people I want to talk to," he says. In recent weeks, that has swung from professional wrestler Terry Funk to Governor Paul Cellucci. It's a range that reflects how his audience's interests have broadened during his quarter-century tenure from "anything in the political sphere to lifestyle issues, how we get along," he says.

All of which fits well with how the host himself has changed. "I've had 25 years of aging," he says. Plus, he says, his 1994 hospitalization "really jolted me. It focused my mind on the things that mattered . . . given me a very firm understanding of the fragility of life.

"I find I'm less ideological and more psychological now," he says, joking that he's become "a bad Libertarian," referring to his well-publicized political allegiance.

"I'm tending to be less judgmental. I really intensely disliked President Clinton, but I don't feel that visceral dislike of Bore or Gush," he says, referring to presidential candidates Vice President Al Gore and Texas Governor George W. Bush.

Of course, in an era of mad-dog talk show hosts such equanimity could be seen as a sign of softening. Brudnoy, as he often does, disagrees ever so politely. "It makes me less of a caricature. It makes me more accessible." Which is, of course, why we keep tuning in.

1256. Mike Douglas' book...?

Newsgroup: rec.radio.broadcasting
Date: 2000-03-24 00:00:00 UTC
From: Don MacMillan <dmacmillan@mailandnews.com>
Message-ID: <nLOC4.9064$Of2.353648@typhoon.ne.mediaone.net>
Source record: 20262

Mike Douglas was recently on the 'promo curcuit' pushing a new book about his daytime talk show that ran for so many years.

Has anyone read the book?

Does it offer any insight into broadcasting and career that might be of interest to those of us in radio...?

Thanks!

After Joan Lunden left GMA, one of the things she did was write a book. I think it was about her career. (As opposed to about how to nurse her baby, etc.)

Has anyone read the book?

Does it offer any insight into broadcasting and career that might be of interest to those of us in radio...?

Thanks!

Source record: 20264

A couple more NJ's to mention:

WAWZ-99.1 Zarephath NJ (and formerly
on 1380 share-time with NYC as well).
Zarephath is mostly the staff and family
of Alma White College.

WBBO-98.5 Ocean Acres NJ. Ocean
Acres is a housing development
west of the Garden State Parkway
in Manahawkin.

I think the FCC is "easy". They enter the
town name and if it doesnt come up,
BAM! First local service.

I'll leave it to other interested parties to look up populations. As for the
Gazeteer, there's all kinds of legitimate towns it cant find...

1259. WEVD: talking radio on the radio 3/24/2000

Newsgroup: rec.radio.broadcasting
Date: 2000-03-24 00:00:00 UTC
From: RadioPaul9@aol.com
Message-ID: <20.3a20299.260d21d0@aol.com>
Source record: 20265

From today's "Daily News" 3/24/2000 but not directly quoted (should i have?)

Max Kinkle will be hosting a show from 4-7 pm on WEVD-1050 NYC

Alan Colmes will be talking about radio on the radio tonight (Fri 3/24/2000)
from 11pm to 2am. Guests to include Allen Sniffen (WABC web page)
and John Mainelli (former WABC programmer from the talk days, who
briefly had a for-a-fee radio info service and now works for one of the
newspapers).

I would urge anyone interested to tape the Colmes show for the benefit of
others
not in their primary coverage area.

Last time I tried taping something from the Colmes show I found out what kind
of 50,000 watt signal at 50 miles WEVD has here to the south.

It was the night before Halloween in 1998 and they had some friends of Long
John
Nebel come in to have a seance to try and contact Long John. In a way, the
fact of reception being WEVD with bits and pieces of CHUM and other
interference
fading in and out made the whole experience more eery.

And a note about the radiation patterns shown for some NYC 50 kw stations
on radiostation.com/kodis (don't use that as a URL) they seem to show
the pattens as if EAST was at the top of the page instead of North.

1260. Re: Foreign Cities as part of the legal I.D.

Newsgroup: rec.radio.broadcasting
Date: 2000-03-24 00:00:00 UTC
From: world!fybush@uunet.uu.net
Message-ID: <FryBA5.4w8@world.std.com>
Source record: 20266

Doug Smith <w9wi@bellsouth.net> writes:

>Today, I'm hard-pressed to think of any Canadian stations, except for
>the four commonly-owned outlets in Windsor, that go out of their way to
>cover a U.S. market.

I can think of one: CKEY 101.1 Fort Erie, Ontario.

With a directional antenna pointing east from the 12-tower CJRN 710
site along Highway 3 in Fort Erie, CKEY offers almost no coverage
on Canadian soil (although they added a booster at St. Catharines
a few years back to help the situation).

ID'ing as "101.1 the River," CKEY programs to Buffalo, where it's
now the lone modern AC in town since WLCE 92.9 and WXOX 101.7 changed
formats and calls.

It has sales offices in Canada (with CJRN) and in the US (where
it's sold as a combo with WGRF, WEDG, and WHTT).

In the other direction, I can think of a few US stations that
target Canadian audiences almost exclusively. WQDY AM-FM in
Calais, Maine maintains sales and news staffs across the river
in St. Stephen, New Brunswick. WBTZ Plattsburgh NY-Burlington VT,
like the TV stations in its market, sells extensively in the
Montreal market. In the economically depressed St. Lawrence Valley,
many of Tim Martz' US stations are programmed to audiences across
the river in the Cornwall, Ontario area (especially the "Yes-FM"
combo of WYSX and WYUL). Watertown's WCIZ (now on 93.3) was aimed
at Kingston, Ontario listeners in its earlier incarnation as
on 97.5 -- the "W" part of the calls was omitted except at legal-ID
time so Canadians simply heard "CIZ," along with Kingston ads and
a Kingston-area phone line for requests. In a similar vein, WBDR
(102.7 Cape Vincent) and WWLF (106.7 Copenhagen) do CHR for the
Kingston-Watertown area, with WBDR running Canadian ads and WWLF
running US spots. Cobourg, Ontario's CFMX (103.1) enjoys a loyal
fan base in the Rochester area, albeit smaller than in its
1980s heyday when the station opened a sales office in what was
then the under-radioed Rochester market. Buffalo religious
station WDCX (99.5) and public broadcaster WNED (94.5/Channel 17)
promote themselves to Toronto listeners and viewers. (WNED-TV
even ID's as "Buffalo-Toronto.")

Out west, religious stations KARI (550 Blaine), KWPZ (106.5 Lynden),
and KCCF (1550 Ferndale) all target the Vancouver audience from
Washington state.

One more note on that bizarre KCND/CKND situation: While Izzy Asper tried to make it sound as though he actually moved the station across national borders, it was of course nothing of the sort, legally speaking. The CKND-TV "broadcast undertaking" on Channel 9 in Winnipeg was viewed by the CRTC as a new station, and the fact that its debut coincided with the shutdown of KCND-TV Pembina ND was, officially, just a coincidence. The channel 12 allocation remained at Pembina until being reactivated in the eighties.

Which is the same as legislating against advertising on US stations! A
business expense which is not deductible is taxable as if it were profit,
making advertising on US stations, well, prohibitively expensive.

"True, probably a unique institution to hold a broadcast license. (I guess it proves that the "have you ever been convicted..." blank in the application form doesn't automatically disqualify you if you answer "yes"<G>!) However, the station's city-of-license is the city of Angola (not the prison)."

There used to be an AM/FM combo licensed to Fort Knox, Kentucky, with the call sign WSAC for "We Serve (the) Armor Center." They claimed to be the only commercial broadcast station licensed to a military reservation (dunno if their main studio was actually on DOD turf or not).

WSAC was also interesting in that it simulcast but still ran two different formats; in the late 1960s to mid-1970s the AM was a daytimer, so they ran an AM-style format on both when the AM was on the air and had an FM album rock format at night! The only things on the AM that were not simulcast were the sign-on and sign-off, since the FM didn't sign off or on.

From: reebok <voonsh@singnet.com.sg>
Message-ID: <8bihrd$6gc$1@clematis.singnet.com.sg>
Source record: 20271

Hi everyone !!!!

There are two spectacular pre-recorded and live FM broadcasts of Mahler's 10th coming up in the next few weeks and months :

Item 1: Cincinnati Sym Orch/Jesus Cobos-Lopez - April 2 on WGUC-FM 90.9

At 09:40 AM 3/24/00 -0500, csoteri@fuse.net wrote:
>Mr. Voon,
>
>Thank you for your kind comments about the February 4 concert! I'm pleased that you enjoyed the performance.
>
>Meanwhile, yes, the Mahler 10 concert will be broadcast on our local Classical radio station, WGUC-FM 90.9, on Sunday, April 2, at 6 p.m. ET.
>
>Best wishes,
>
>Teri McKibben
>Publications Manager
>Cincinnati Symphony Orchestra

Item 2: Royal Concertegebouw Orch/Riccardo Chailly - June 4 on Radio 4 (Netherlands)

At 10:06 AM 6/1/99 +0200, info@concertgebouworkest.nl wrote:
>Dear Mr. Voon,
>
>The AVRO will broadcast Mahler X live on Sunday 18 June 2000 on

Rock-it Radio listeners club Home Page: Archive: Message #176

Date: Mar 25 2000 05:44:15 EST
From: "Rock-it Radio listeners club" <Rockitradio@earthlink.net>
Subject: Rock-it Radio show #151 is released

Yes it's True Rock-it Radio show #151 is out and rockin.

Here is the rundown. We have just received a very rockin CD from a
Rockin Gal from Down Under in New South Wales, Australia.....
Her name is Brigitte Handley and she has a great new CD out called
Red Hot and Blue. She is the featured artist in show #151.
She is also in the lineup for the Jackson, Tn. Rockabilly festival next
month so keep an eye (and ear) out for her.

We have also thrown in more Doo Wop on show #151 as the voting in our
opinion poll is getting closer and usually a tie between Rockabilly and
Doo Wop. If you haven't voted in our opinion poll yet go to our main
website http://www.rockitradio.net and scroll down to where it
reads opinion poll and cast your vote.

Anyways here is the playlist of show #151.

1. Rockin Lady Brigitte Handley 2000
2. Buick '59 The Medallions 1954
3. Blue Suede shoes forever Harry Hepcat 1999
4. Let's Go Hank Ballard & Midnighters 1960
5. Little Girl of mine The Cleftones 1955
6. When you're alone Donnie & the Del Chords 1962
7. Gamblin' my life away Rip Carson 1999
8. Sent up The Falcons 1956
9. Blue Days-Black nights Go Cat Go 1997
10. Peanut Butter The Marathons 1961
11. Ducktail Joe Clay 1956
12. Little Pedro The Olympics 1961
13. Go Like 60 Brigitte Handley 2000
14. Mary Lee The Rainbows 1955
15. I'm so young The Students 1958
16. All Right Baby Marti Brom 1999
17. Till Then The Classics 1963

We hope that you enjoy show #151 -- To listen to it go to our archives
page at:
http://www.palmsradio.com/rockittext.htm

~~~~~~
~~~~~~

Rockabilly page expanded: Today we worked on our Rockabilly links
webpage a bit. We have included links to great sites like:
Grindstone Magazine; The Sun Record Studio and the Brigitte Handley
website. The Rockabilly links page of Rock-it Radio is:
http://www.palmsradio.com/rockabillylinks.html

We haven't forgotten the Doo Woppers out there!!! We have a page
of links for you too at:
http://www.palmsradio.com/doowop.html

If you know of a great oldies site, or an rockin artists website that you
think should be on the Rock-it Radio links pages e mail us and let us know!
Our e mail address is:
Rockitradio@earthlink.net

~~~~~~

Lane Quigley and the Memory Lane show is on a well deserved vacation
this week but he will be back soon with more great shows and we will
get them up on the Rock-it as soon as possible.

In the mean time and we should have one up by tomorrow we have 2 new Harry
Hepcat shows coming up here on Rock-it Radio. We are always glad to have
old HH do a show for us here at Rock-it Radio with his ever popular Hard
core Oldies show.
~~~~~~

Remember also our Radio links page -- You know there are almost 8000
Radio stations worldwide that are now broadcasting in the internet!!!
We have a page dedicated just to that fact!!! With links to several
directories that tell you where to tune into these stations.......
The Rock-it Radio Radio links site is at:
http://www.palmsradio.com/radiolinks.html
~~~~~~

Do you have any requests or dedications or messages you want to send to a
friend or loved one across the internet either half way across the world
or the next work cubicle across from your desk??
Rock-it Radio wants to take a more active roll in doing this for our
Listener club members. !!! E-Mail us with your requests or dedications
or message to:
Rockitradio@earthlink.net
and we will let you know when and what show it will be aired on.
~~~~~~

Rock-it Radio giveaways!!! -- In Rock-it Radio show #150 we featured the
New CD of the Bourbonaires. -- " A shot of Bourboniares" --- We have 2
CD's to give away for free......
To our listener club members. Just be the First 2 listeners to
e mail us right now and say: Yes -- I want the new Bourbonaires CD
right now" E mail us at: Rockitradio@earthlink.net

This is a great New CD from this Cambridge, Mass. Rockabilly band.
~~~~~~
~~~~~~

Remember when you can help support the Rock-it when you are in the mood of buying CD's, Videos, Books and Electronic Toys.....Shop at our website at http://www.rockitradio.net and scroll down to either Amazon.com and or CD Now. When you buy from these sites you help keep the Rock-it on the air!!! and you get good things at a good price!

Next show will be Harry Hepcat everyone!!!

God Bless and Take Care!!

Bennie Dingo
Rock-it Radio

e mail: Rockitradio@earthlink.net
URL: http://www.rockitradio.net

Remember it's free and easy to become a member of the Rock-it Radio listeners club (population 608) All you have to do is go to the top of our website at http://www.rockitradio.net and enter your e mail address at the left of the Red Listbot button. Press the listbot button and follow the instructions and you are in! And in the know of what's next on the Rock-it.

1270. IRW

Newsgroup: rec.radio.broadcasting
Date: 2000-03-26 00:00:00 UTC
From: Blaine Thompson <phredd@indy.net>
Message-ID: <Pine.SUN.4.10.10003251752110.18456-100000@indy3>
Source record: 20276

Northeast

Country/WBTU (93.3fm, Kendallville) is sold to Artistic Media Partners, owners of several stations in Bloomington, Lafayette and South Bend. This marks Artistic's first entry into the Ft. Wayne market.

Northcentral

David Amick departs from Country/WBYT (100.7fm, Elkhart/South Bend). Amick was the morning stunt guy ("Daredevil Dave") and did middays. He heads to Norfolk, Nebraska where he'll be Operations Manager, morning man, and part-owner of KUSO (92.7fm, Albion, Nebraska). IRW wishes David the best of luck in the new venture.

CHR/WNDV (92.9fm, South Bend) APD/PM Drive guy Brian Bell exits. Beau Derek joins "U-93" for afternoons (Derek also earns Music Director responsibilities). Derek was perviously at Rhythmic/WDRQ in Detroit, Michigan.

To add to their application in Nottingham, Great Lakes Community Broadcasting files for a station on 88.5fm, licensed to "Newbury Township" (near Shipshewana & Goshen), and another at 88.7fm in "Kinderhook Township, Michigan" (near Angola, Indiana)

Kokomo news: Pensacola Christian College files for a station at 88.1fm licensed to nearby Galveston.

Northwest

There's a void in afternoons at Hot AC/WAZY (96.5fm, Lafayette). Dave North exits for the desert southwest: He'll be Director of Operations at Millennium Media's stations in Gallup, New Mexico.

Soft AC/WSAL & AC/WLHM (1230am & 102.3fm, both Logansport) have a new News Director. Tim Makenzie arrives from Lansing, Michigan where he worked at Citadel's WFMK, WJIM-AM & FM, and WVFN. An interesting note: Makenzie replaces Dick Prescott, who had to leave WSAL & WLHM since he's now the Mayor of Logansport.

Eastcentral

Richmond news: Pensacola Christian College files for a station at 91.9fm, licensed to nearby Cambridge City.

Central

The big news was definitely in Indianapolis, where Maryland based Radio One purchased all of Bill Shirk's Indianapolis properties: Rhythmic/WHHH

(96.3fm, Indianapolis), Rhythmic Oldies/WBKS (106.7fm, Greenwood), and Jazz/WYJZ (100.9fm, Lebanon). The $40 million deal also included W53AV, ("WAV-TV") a low-powered TV station.

990am returns in Muncie: WLHN (formerly WERK-AM) is now on the air. Operating with 62 watts, under an STA from the FCC, WLHN airs southern gospel music & religious programming. We hear a zoning problem has arisen concerning the number of towers (bad pun, we know)

Over in nearby Anderson, a big landmark disappears. The old WHBU (1240am, Anderson) Blaw-Knox Tower was removed in February. At 175 feet, the self supporting tower sat atop the six-story Union Building in downtown Anderson. Replacing this tower is a new guyed tower on the south side of town. The upper 6 feet of the old tower, including the top beacon, will be housed in a local museum.

The Blackford County Schools station in Hartford City has call letters now: WHCI (88.1fm, Hartford City)

Now to Indianapolis, where Dana Marshall, formerly afternoons at Country/WGRL (93.9fm, Noblesville) departs for sunny Florida. Night guy Brent Lee segues to afternoons (1pm - 6pm) and Chris Clare (formerly overnights) moves to nights.

Alternative/WEDJ (107.1fm, Danville) adds Couzin Buzz (aka Tommy Mason) for nights. Mason arrives from WUZZ/Lima, Ohio, where he did mornings.

Before we leave the capital city, we'll tell you that WOOO (1520am, Shelbyville) flips calls to WKWH. This is on purpose, tho: The new owners are the electrical company for the the Shelbyville metro area (and we all knew that "KWH" stands for "KiloWatt Hour", right?)

This just in: As we write this, Classic Rock/WNAP (93.1fm, Indianapolis) is stunting with music and a "computer voice" countdown to 6am, Tuesday morning. What happens then? We speculate a change in format and the departure of the syndicated Howard Stern morning show. We'll give all the details in our next issue.

Westcentral

CVL Broadcasting, the new owners of WVXI (106.3fm, Crawfordsville) flips format to CHR.

CHR/WMGI (100.7fm, Terre Haute) morning co-host Kolene Kaye departs. Kaye was also Music Director.

Southeast

News from Columbus: Hot AC/WRZQ (107.3fm, Greensburg) welcomes Karen Steele as their news director. She was last at WGCL/WTTS (1370am & 92.3fm, both Bloomington).

Marty Pieratt's Star Media names Devin Marsh as "Group PD" for WIKI (95.3fm, Carrollton, Kentucky), WJCP (92.7fm, Austin), WJLR (91.5fm,

Seymour), and WWWY (104.9fm, Columbus).

Southcentral

The Tell City Broadcasting CP on 105.7fm has call letters: WTCJ-FM. We believe that "Tell City Broadcasting" has something to do with James Roland Brewer, but we've not yet learned the connection. If you know, please let us know!

Bloomington news: Pensacola Christian College files for a station on 89.9fm in nearby Whitehall

Southwest

Calvary Chapel of Twin Falls, Idaho (not Crawfordsville!) files for a translator at 89.3fm, licensed to Rochester, Illinois (just over the line, near Evansville)

That's it for this issue! See you in two weeks...

1272. Seeking Disgruntled BSI Users

Newsgroup: rec.radio.broadcasting
Date: 2000-03-26 00:00:00 UTC
From: Shawn Fink <finkster@en.com>
Message-ID: <38DE2E58.7346964E@en.com>
Source record: 20278

I am actively seeking disgruntled, upset, p.o'.d, disillusioned and otherwise unhappy users of BSI products, in particular the various incarnations of WaveStation.

For that matter, I'm also seeking satisfied users of same product (are there any out there?)

I for one, have had nothing but troubles since I purchased WaveStation in November of '98, and have run into brick walls from Mr. Burley and associates whenever I've sought help (after shelling out beaucoup d'bucks too!!!, that stuff ain't cheap). I assume that if the software is giving me fits, it must be doing the same to others.

Please respond pro or con, via private e-mail finkster@en.com

And if there's anyone out there who's figured out all the WaveStation quirks, PLEASE contact me!!!!!

Message-ID: <C0tD4.15973$624.1370651@news.flash.net>
Source record: 20280

I've put Wavestation in a number of stations. The most successful are KRSN-AM, Los Alamos, New Mexico (news-talk), and KSFQ Santa Fe, New Mexico (live-assist and full automation). KSFQ sounds great, a terrific AC format. The least successful was at a Simmons station in Albuquerque (news-talk). Wavestation is NOT an automation in a box. If you are not inclined to fiddle and tweak, don't buy it, as there are lots of good systems that will work nicely for you. But, they have you pay for that system that works out of the box. Then, they have you pay and pay for support and updates. As for me, I am putting on a new station in Albuquerque in a few weeks (owned by myself and a partner). I will be using Wavestation with full confidence. Best to all, Don Davis

Booth announcing was a lot of fun. I did it for about three years in the
mid-50's--may a little later. The nice thing about it was that you could
get one heck of a lot of reading done on a shift. A half hour's work on
the network could
consist of looking up from your book for a few seconds, switching to the
copy book, and saying something like: "Bugs Bunny meets the Road Runner 30
minutes from now on ABC." Station booth announcing could be even
simpler--like saying, sometimes only once an hour, "Channel 7, New York."

ABCs opening half-hour pre-Oscar program sucked! How does Tyra Banks get this gig?! She totally flubbed her one line at ESPN's ESPY Awards! She's a horrible actress! Not to mention the fact that she has a LOUD, irritating spoiled brat kind of voice that just simply grrrrrrrates on you like nails on a chalkboard! Like they say, she must have a great agent! And then there's that MTV jerk Chris O'Connell something or other. I don't understand everyone thinking they have to be like MTV. MTV's whole "act" is to try and come off as an "anti-network". And now the networks are so "cable whipped" they think the answer is hiring all these weak, lame-ass geeks! Most radio stations have already conceded to these goons as the big authority on what's cool and what's not! Now it's sad to even see big TV networks do the same. I mentioned a while back how disappointed I was that a weak talent like Carson Daley got a deal with parent Viacom to produce and develop shows for CBS. These "too cool for the room", boring, no-talent MTV idiots ought to be grateful of the pure and simple MONOPOLY that this so-called music video channel enjoys. You could put anyone in their positions and I mean ANYONE. They've already proven it with with all those stupid "so you wanna be a VJ" contests! I can't wait until these pompous creeps have some real serious competition. THEN we'll see how cool they REALLY are!

Source record: 20286

Viacom is very lucky that it has a monoply over music televison
programming, and has had many lucky breaks for this to remain the case.
Viacomes monoploy though has been less than benificial to the music industry
though, because MTV seems to favor some musical genres over others just
because it decides what to put on its increaseingly thin amount of music
related programming. And even with its monoply and name brand, MTVs ratings
are not all that impressive.

Anyways, the dept of Justice has opened a probe into Viacomes musical
monoploy, and if MTV gets viable competition, if for example FOX newscorp
gets control of VH-1, then MTVs ratings will collapse. MTV, unlike radio,
does not realise/care that there is a different audience and lifestyle that
does not live in New York City or care about being "hip".

1281. Academy Awards

Newsgroup: rec.radio.broadcasting
Date: 2000-03-27 00:00:00 UTC
From: realdeal106@webtv.net
Message-ID: <25664-38DF065D-65@storefull-173.iap.bryant.webtv.net>
Source record: 20287

The one thing I found cool about the Oscars was all the on-camera
time they gave voice-over pro Peter Coyote! The set-up was cool too.
They placed his "booth" just off stage right. To say there was a "buzz"
of activity around him would be an understatement! A lot of the time
he'd be making announcements (historical facts, teases, introductions
etc.) never missing a beat while winners and presenters exited or hung
around waiting to go on stage! Production staff, security, and God knows
who else all milling around his booth AND almost directly behind him
several shelves holding statues that had yet to be handed out! Whew! He
just kept it all in stride like a true PRO!
(Am I a Geek or What? Proud to say YES!)

I can remember a few years ago, TV Guide had a savage editorial attacking Canadian cable TV systems. They charged that they were stealing US TV signals and putting them on Canadian cable systems and boo-hoo, the US stations weren't getting any money for it and SOMETHING just had to be done about this horrible situation.

Of course, what they DIDN'T say was that anyone who buys a commercial on a Buffalo station is also being afforded, as a bonus, the opportunity to sell his products in Hamilton, St. Cat's, and Toronto because that's where the TV signals go. Or if McDonald's buys a spot on a Burlington, VT or Plattsburgh NY station, it also has the potential to be seen by 1.5 million in the Montreal area. I'm sure the TV stations that advertise in TV Guide also forgot about that, too.

Needless to say, they also conveniently forgot that around 70 percent of the Canadian population lives within 40 miles of the US border and can receive US TV signals off of the air.

I never set foot inside or heard WSAC, Ft. Knox, KY.
But in the early 80's, I ran a Situations Wanted ad in
R&R and got a call from the general manager. He asked
about my current employment and I told him where i
worked. He then asked very arrogantly and
condescendingly "what's the problem there". I decided
to forego sending a tape. (This could be a thread, the
strangest place you've been contacted or contacted
about a job.

I haven't been keeping track of who's been winning the
prizes on all access, but it is a radio site operated
by Joel Denver. www.allaccess.com.

It used to be North Texas State University. Hence KNTU.

Seadrift, TX now has an FM station, at least as the shingle from the FCC reads, although I bet that if it has a studio that it is in Port Lavaca (25,000) or, more likely, Victoria (65,000). Just about the only thing in Seadrift is a Union Carbide chemical plant and a lot of shrimp boats and shrimpers. It is also home to former Texas A & M Linebacker (now Dallas Cowboys LB) Dat Ngyuen. Population around 1,000, maybe.

1290. Looking for technical help in Boston

Newsgroup: rec.radio.broadcasting
Date: 2000-03-27 00:00:00 UTC
From: umar@world.std.com
Message-ID: <200003280239.VAA03948@h00104b024a24.ne.mediaone.net>
Source record: 20296

I'm looking for someone to help with a variety of computer and RF-related tasks at the suburban Boston headquarters of a four-station radio group. In keeping with our company's philosophy that attitude is everything, I would not be averse to hiring someone right out of college or actually *in* college if (s)he has the right attitude and aptitudes.

We are heavily invested in computer technology; the announcing staff at our Boston station runs it and two others, plus a nationwide radio network, using a network of DOS- and Windows-based workstations and servers running Novell Netware and Linux, connecting to the outside world via ISDN and T-1. Our particular specialty is classical music, which presents unique challenges and learning opportunities (we also run a classic rocker on Cape Cod). We expect to be acquiring additional stations and making significant investments in new technology at our current stations, so the person who signs on with us will be helping with antenna upgrades, transmitter installations, and assembling new studios as well as some software and Internet-related projects.

Please e-mail me if you are interested in working with us. Our company is an equal opportunity employer.

Rob Landry

1291. Clear Channel to buy WKDD. Anything we can do?

Newsgroup: rec.radio.broadcasting
Date: 2000-03-27 00:00:00 UTC
From: sjsobol@NorthShoreTechnologies.Net
Message-ID: <slrn8e07as.chk.sjsobol@amethyst.nstc.com>
Source record: 20297

Clear Channel Communications is preparing to buy Akron, Ohio's WKDD-FM from Barnstable Broadcasting.

They were playing the message about having their public file open for review last week. It did not hit me exactly what that meant until I talked to someone within the Cleveland radio industry today...

Is there anything we can do about this? ("we" being listeners in Northeast Ohio)

The rumor is that they want to flip WKDD to country. The word "simulcast" was thrown around during my phone convo today. This would be an incredible waste of a powerful signal that extends from the lakefront deep into southeast Ohio, over a hundred miles away.

WKDD reaches most of the Cleveland market. Clear Channel's WGAR is a Cleveland station that reaches a large portion of the Akron market. WGAR plays hot country. (Does anyone have Arbitron numbers handy for these two stations?)

WKDD has an award-winning morning show and does more for local causes than any other Cleveland or Akron radio station.

WKDD also doesn't screw around with "local" promotions that are actually regional or nationwide -- Clear Channel has *finally* gotten around to admitting on-air that they pull these stunts. WKDD never has.

Does anyone besides me see a problem here? Why buy a station just to extend another's range?

Since the markets overlap, might I be able to get them on a technicality in the ownership laws? (i.e., if WKDD broadcasts into Cleveland, could I convince the FCC that they are in violation of ownership regulations if they already have own the max number of stations in Cleveland?)

IS IT JUST ME, OR DOES SOMEONE ELSE SEE A SERIOUS PROBLEM USING A 50,000-WATT STATION AS A REPEATER FOR ANOTHER 50,000-WATT STATION 15 MILES AWAY?

(and don't think for a minute that CCC wouldn't do it if they thought it could make them a couple cents more every month)

The other rumor -- and this one involved simulcast as well -- would be
for it to simulcast top 40 WAKS-104.9 Lorain to give the top 40 format
fuller coverage. Since Cleveland lacks a full signal top 40 and only
has WAKS, that might be a more useful use. At best, WAKS only reaches
the western part of Cleveland.

My understanding is that any FM station above 92 mHz is automatically considered a commercial station, though they may be operated as either a non-profit or non-commercial if they want. BTW, barter is a common method of "payment" for non-comms and seems perfectly legal.

On another note, I've often heard that having a underwriting director at a non-comm paid by a commission on each new underwriting contract is against FCC regulations, but I'm unclear which ones or if it's even really true. Anyone know for sure????

1295. A Different Kind Of Oldies Show Update - 3/28/00

Newsgroup: rec.radio.broadcasting
Date: 2000-03-28 00:00:00 UTC
From: Steve Coletti <bigsteve387@compaq.net>
Message-ID: <002101bf9868$b742eae0$a5ccfea9@compaq>
Source record: 20301

Well this past weekend we rebroadcast the Tribute to Curtis Mayfield. When we did it live back in January we tried to do it through an internet feed. The Shoutcast software only put out one audio channel, (fixed in the new release), and we had dropouts due to net congestion. Well if you were listening Saturday on WBCQ, the infamous Allan Weiner or some other genius up there decided to rewire the input patch to the board from the CD player. Only one channel was going out on the air until I called in and got Tom to put a Y connector in the line and doing that caused drop outs, (much shorter or course). I guess I just can't win. Anyway, it is streaming 24/7 on www.live365.com in both stereo and mono. Link to it with your MP3 player from our website.

Well we've used up all the advanced programming I recorded before my surgery so it's back to creating new stuff. We still haven't gotten the studio back together since the disassembly for the Winterfest remote, but we did manage to get a juke-box formatted show together for next week, April 1. It's the tunes I play for myself at home. Some are Doo-Wop, there's a big band record and a few are Jazz/Pop things. I think you'll find it interesting and quite diverse.

In two weeks I'm putting together a show on TV themes and TV show inspired records. NOW, the week after is one that will require a lot of work and permissions. We're planning a look at oldies webcasts and downloadable oldies shows. I haven't even started on this so it just might be put off a week or two. If you do an oldies webcast or an on the air show that is also heard on the web please let me know who and where you are by e-mail. I'll be contacting some webcasters I already know of this week.

Speaking of webcasts, WCBS-FM's Bob Shannon is planning to present his 'Lost Hits" on a webcast. The site is being set up and I've established a link to it from my "oldies links" page. As for the rest of our website, we've reinstalled an ICQ e-mail pager on our home page and I've also made some cosmetic adjustments.

The BIG news is that for those who have asked about it, we've now set up a page where you can find out how to order our previously aired programs. You can click on the "shows for sale" heading on our home page. Please sign our guest book when you visit our website. All the information is in the signature below.

Actually, it's the other way around. 88-92 MHz is reserved for
non-commercial educational FM licensees. Non-comm stations have been
licensed in the 92-108 MHz band - we have several examples of these in
eastern Massachusetts (WRBB Boston at 104.9, WBRS Waltham at 100.1,
WHHB Holliston at 99.9, and WYAJ Sudbury at 97.7 - all of which are
grandfathered Class Ds, licensed to colleges or high schools). They're
definitely the exception rather than the rule, but still they do exist.

Well, I posted a message on their website in their guestbook and
promptly received a reply that the format change wasn't going to happen
(from one of the air staff).

But you're wrong about WAKS. WAKS, now that their power has been
increased, reaches all the way into Lake and Geauga Counties now. They
cover just about all of Cuyahoga County (which is where Cleveland is
located).

Try pirates.......

back about 2 years ago, much like most popular software that's
downloadable, it gets cracked to remove the restrictions. everybody
and his dog was downloading 2.71 and using it as a jukebox, until BSI
supposedly threw in a trojan virus that was destructive to your HD
upon cracking...while admittingly, he has a right to protect his
copyright, it's a unusual tactic for a professional software company.
More professional software, like scott studios, has keys, is used on
specific sound cards, and other particular more professional
measures, that is less like a guerilla tactic.

Needless to say, no one really bothered with BSI anymore...in reality,
the demos I downloaded at the time made me wonder who would use this
on a REAL radio station??? budget minded OK.....but I wasn't
impressed..especially for wavcart....far too expensive.....

sorry to see they are not much better for the paying customers.

1303. NYC Radio News 3/29

Newsgroup: rec.radio.broadcasting
Date: 2000-03-29 00:00:00 UTC
From: Dave Hughes <fuzface@ix.netcom.com>
Message-ID: <MCnE4.23613$E85.579321@news1.rdc1.md.home.com>
Source record: 20309

NYC Radio News 3/29 from http://nyrtv.tripod.com

It looks like Infinity/CBS-owned hot talker WNEW (102.7 FM) has its sites set on a sports-oriented morning drive talk show, so as to not rattle Howard Stern's feathers at co-owned WXRK (92.3 FM). NEW has focused on Scott Kaplan and Sidney Rosenberg, who currently host an internet-based show called "The Drive" on CBS's sportsline.com......

Baltimore-based sports talker "Nasty" Nestor Aparicio (left) will be heard on One-On-One Sports station WJWR (620 AM) starting 4/4. His call-in show will be heard from 2 to 6 PM each weekday.....

The NY Daily News reports that George Kalman, former vice president of WNSW (1430 AM), says he and Gerry Turro, owner of WJUX (103.1 FM), are putting together an Internet-only station that will debut in July and play popular standards "just like Sunny [WNSW]." There's been lots of talk that WNSW, which has not been doing well in the ratings, will go back to its brokered ethnic format. WNSW picked up the nostalgic fare early last year, after WQEW (1560 AM) dropped the old stuff for Radio Disney in late 1998.....

Nassau Broadcasting Partners, which owns a batch of stations across southern NY state, eastern PA, and NJ - including WPST and WNJO in Trenton - in late March announced a $185 million deal to buy the stock of Aurora Communications, which owns nine radio stations in Westchester County NY and Fairfield County CT. News of the deal comes less than three weeks after Nassau unveiled a deal to purchase two Allentown PA stations being spun off by Clear Channel (in its acquisition of AMFM). After all the deals are completed, Nassau will own 32 stations. New to Nassau - WFAS AM/FM, WFAF, WEBE, WICC, WINE, WRKI, WAXB and WPUT.....

Commercial/non-commercial status is indicated on the station's license. Non-commercial stations may be licensed on any frequency. Commercial ones may only be licensed on 92.1 and higher. Certain technical regulations are relaxed for operation between 88-92MHz (specifically, it's easier to find an open frequency) so it's relatively unusual for a non-commercial station to operate above 92MHz, but it does happen. It's most common where no 88-92 channels were available, or where a failed commercial station was donated to a non-commercial organization & they didn't bother to (or couldn't) change the frequency.

The restriction is non-*commercial*, not non-*profit*. There's nothing that says a commercial station has to try to make money, or even that it has to air commercials. That applies to quite a few religious stations in the 92-108 band. (some of these stations also charge for their airtime, which definitely puts them in the commercial category even if you aren't hearing 30-second ads for Hardee's)

Barter would be restricted by the limits on what can be said in an underwriting announcement. I suppose that's not a very serious limitation.

Good, now maybe he can quit saying he's from Baltimore! One of the more
annoying aspects of his show!

Is this going to be a local show on 620, or is he replacing Peter Brown as the
network's afternoon drive host? I looked on 1-on-1's web site and saw nothing
to that effect.

I gather that he'll originate from 10 kW WBIS Annapolis - soon to be 50
kW with transmitter within Baltimore city limits.

1309. Daytimer Sunrise? WMIC 660 Sandusky MI

Newsgroup: rec.radio.broadcasting
Date: 2000-03-29 00:00:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <38E2730C.4B21@mindspring.com>
Source record: 20315

Listening in Columbus OH to Imus on 660 WFAN NYC at 6am EST thru
March, about one day out of five I hear (after nulling out the
Cubans to the south) WMIC 660 Sandusky MI at almost equal
strength, with the ABC news, from 250 miles to the north.

WMIC has a daytime license for 1kw as far as I can tell.

The FCC lists sunrise times there as (EST)

January 8:00
February 7:30
March 6:45
April 5:45
May 5:15
June 4:45
July 5:00
August 5:30
September 6:15
October 6:45
November 7:30
December 8:00

So the question is are they allowed to turn on at 6am in March?

Only if the have presunrise authority, which would be unusual on a clear channel. However, some clear channel stations get to go on-air at the sunrise time of the dominant station (WFAN). Since WFAN is further East, perhaps they are allowed to go on-air at NYC sunrise.

NYC is less than five hours from Columbus, and in the same time zone...
I can't imagine the sun rises a whole lot earlier in New York.

The earth rotates once each 24 hours, or 15 degrees per hour. NYC is on EST, which is based on the sun-time at 75 degrees west. The central time zone is based on sun-time at 90 degrees west. The boundry should be at 82.5 degrees west, where the sun-time is half an hour later than at 75 degrees. Manhattan, NYC, is about 74 deg W, or 4 sun minutes before true EST. Detroit is at 83 deg W, or 35 sun-minutes west of NYC. aSndusky, MI, isn't far from 82.5 deg W, or 34 sun minutes later than NYC.

If the Sandusky station were controlled by sunrise at NYC, rather than its own, it would be able to sign on a half-hour before its own sunrise.

The edge of EST ought to be at Detroit, but for some reason it has crept west almost to Chicago, giving those folks about an hour of permanent DST. No wonder Indiana doesn't like DST.

March sunrise at WFAN is 6:15 EST, a half hour earlier than WMIC's 6:45.

Okay, many say webcasting is the future and others think not, but in any case, I'm trying to find out the answer to a basic problem setting it up.

The software part is very easy, but what I can't work out is the bandwidth part. How do you get sufficient bandwidth on a cost effective basis so that 100 or more people can download your webcast??? Heck, I'd be happy if someone could point me towards something cost effective enough to even reach dozens of people for starters.

What have the smaller, budget-conscious radio stations been using???

Much thanks!!

Yes, according to the NRC Log WMIC has a 500-watt PSRA, meaning they can operate with 500 watts between 6am and sunrise. (it becomes a moot point on Saturday<g>)

Source record: 20323

Many of you in Texas are already aware of the storms that came through the Dallas / Ft. Worth, Texas area on March 28th. But for those of you who aren't, the storms brought quite a few twisters.

The damage caused was extensive: High rise towers became "glass and rubble", numerous homes were literally demolished, cars were blown around and a glass ceiling at a library caved in.

As of the morning of March 29th, it has been reported that at least 4 people died and almost 50 more were injured. While these numbers are low, the entire storms systems passed through during afternoon drive, with numerous commuters on the way home from work.

There were plenty of EAS activations during the course of the storms, and I would like to personally commend all the DFW stations who utilized this technology for getting this very important information out on the airwaves.

A job well done, thank you.

Big BIG props to DFW stations for truly serving their community!
Broadcast companies spend literally millions of dollars on research to
determine what songs to play to their audience, but all too often fail
to be there when they REALLY need them!
BTW I wonder what The "disaster oddsmaker"
idiot Rob Hardin has to say about all the lives that were possibly saved
or people that were even just plain and simply comforted by the
information put on the air by these REAL broadcasters!

It proves my point. Big hype small deaths. You lost more people in traffic accidents that afternoon, and more in the morning for that matter, and more every drive time in traffic.

All these infinitely more numerous deaths get from radio stations is ``keep to the left past...'' traffic advice from the copters. There's no ratings in traffic deaths. Somebody should work on how to hype them up into a major anxiety for the audience. Imus's ``Here's Eileen with a report on people squished in traffic'' is the best attempt I've heard at raising their ratings value.

If you're doing a rigorous Baysean analysis of tornado deaths, notice that the odds just went down again that you'll die in one. Where are they now? Once every six million years.

Even the odds of dying in a traffic accident are too small to worry about. Tornados are completely off the radar, odds-wise.

Which stations did you hear the EAS activations from? I would be interested in the ownership of the stations that were at the forefront of coverage (break programming).

Also, did any stations have a sponsor attached? For real, we had a small sponsor when nasty weather broke out for tow services. Hey hey hey, more NTR>

WBAP-AM, KSCS-FM and KEOM-FM for sure, and none of them used sponsorship tags (at least not that In heard). Of course KEOM is a non-comm. WBAP-AM and KSCS-FM are the EAS LP stations. I myself would like to know how many other stations used EAS. I know that normaly KRLD-AM does not use it. I was unfortunately unable to check to see what TV stations, if any, might have used the EAS.

Here's some more information on the extent of the damage. Approx 150 homes are damaged, and about 90 of them are damaged beyond repair. (this should blow Ron Hardin's number theory clean out the window, no pun intended).

The Cash America mini skyrise (one of the first buldings hit by a twister) has not only blown out windows, but also structural damage, and will probably have to come down.

Semi-tractor trailors were flipped over at a warehouse distribution center, and approx 80 other skyrise towers have blown out windows.

Total cost of damage to commercial property alone is estimated at $157 Million and Gov. Bush has declared parts of the area as federal disaster areas.

The death toll still stands at 4 and there's a 5th missing person (presumably dead). I was watching more video footage on the Foxx affiliate this morning, and it is just absolutely a miracle that there were no more deaths. Some of the buildings look eerily similar to the Murrah Federal building after the bomb went off in Oklahoma.

Another interesting note (and this discredits Ron Hardin's anxiety theory) is that even with all of the damage and loss, people in the community are overall very upbeat.

There's a thing called cognitive dissonance, where evidence is not believed
but turned into its opposite.

Tornados kill few people. It is not a miracle that there were no more deaths.
It's the usual thing. History supports it.

A miracle would be if it killed hundreds.

You could perhaps help get a grip if you tried to imagine how to _set things
up_ so a tornado would kill hundreds. It's not easy to think of how to do it.

You get a bunch of wind, but what to do with it?

WEBCASTING -Pipes too Full -Solution

_____
Did you notice during the Clinton -Starr shows that even the biggest
Networks & Congress got overloaded, as very many people logged on
The little stations or Indies don't worry, since few people actually log on
to overload their Server. IF you're serious, Xerox PARC had the
answer a few years ago, Multicasting. The Site ID is bumped up so
that your TCP/IP is Multipoint, vs point to point, which gets your pipe
full as you run out of pipes. Setting up Multicast & linked to a router;
one can send just one signal and the new pgmd routers replicate
to those in their domains who wish to listen, (or view)
I sent video conferencing out on Wiman's wireless 2.4Ghz, and
many could evesdrop. You need a pro Net Guru to get started,
if you don't understand what you and you listeners want to do.

Well, of course, only those paranoid schitzophrenics
in the DFW area even wondered why trailers were
overturning, and even when their cars were being
lifted off the ground, all the normal people were
upset that someone interrupted Lynyrd Skynyrd and
mentioned what was going on. Radio, stop that! Just
ignore severe weather! So a building's blowing down?
Who cares!
Seriously, I think there's no hope for Ron Hardin. It
just didn't occur to him that if there were no
warnings, as he wished, the death toll would have been
much higher, but of course it still would have been
one in so many million so radio and TV still should
have ignored it and acted like nothing was happening.
(I suppose that also means that if anyone was
evacuated to the basement of a high rise that the
building management were all idiots (after all, no one
should have recieved a warning).

Ron Hardin(the head),
Give it UP, man! You are truly delusional!
I suppose firefighters shouldn't wake the occupants of homes next to a fire based on odds and statistics. Maybe a few of "The Final Four" teams shouldn't even bother to show up in Indianapolis this weekend based on odds and statistics right, clueless? If we all lived our entire lives based on statistics and odds we'd all still be bowing to British Royalty, or speaking Spanish, German, Japanese or Russian!!

Actually, the 6am sign on only is a moot point for one
day, as DST will kick sunrise back to 6:45am Eastern
Daylight, but they'll still be able to sign on at 6
with their PSA. We've got a couple of those situations
around here, with PSAs tied to sunrise of eastern
station (WDAO 1210 is one). I always like AM DXing
aroun the time switches to see who forgets that we
reset the clocks, not the sun. I think now-defunct
WPRT, Prestonsburg, KY was the worst offender in the
70s and early 80s. Last spring I caught the 550 in
Buffalo hitting high power too early the Mon after DST.

I agree. Two of the buildings (Cash America + the big round, blue Bank
One building) look just like the bombing. I think that big green
building also had windows lost too.

Kinda funny how only Spanish KUVN-TV made this comment. All the other
TV stations compared downtown Fort Worth to Lebanon or one of those
Middle East places.

Actually the comment was made by the official spokesperson for the
City of Fort Worth, in an interview with the AP. I used the sound
bite on the air this morning.

Brad & others:
You're right, Brad.

If station operators are so lax about paying attention
to power and/or antenna pattern changes, it's little
wonder why DXers find it easier to pry loose the
teeth of a live tiger than receive a verification (QSL)-
letter from a radio station in reply to a DX reception
report....with out without return postage included.

Heck, I even include a short, 2-sentence describing
just what I'm seeking in a short letter from the station:
(i.e.: "...on a piece of your station's letterhead, please
write or type the words 'this verifies your hearing
W-XXX on (date).......I collect these letters as
a hobby. Your reply is sincerely appreciated.").

Even with the above explanation, and follow-up
phone calls don't seem to help most of the time.

I e-mailed the jock/owner of the Cedar Rapids
station on 1630kHz. with a reception report,
called the guy on my "dime" 2 weeks later and
talked to him for a half hour (I'm in radio also),
and even though he promised to send a
verification letter, haven't heard a word from
him after 3 follow-up e-mails.

OK, I'm on a tangent (sorry)....but, AM DXing
isn't nearly the fun it was even 10 or 15 years
ago.

Bah, humbug...hi,hi.

WGR does not have a "high power"as it is 5 kw day and night according to FCC
database.
..
>
> If station operators are so lax about paying attention

The response to verification requests has declined in proportion to the lack
of oldtimers at stations. In the first 30 or 40 years of radio, reception
reports were welcome and part of the era. Way back, stations even issued
verification stamps (EKKO stamps) and stations had a full engineering staff.
Now, engineers don't understand the hobby as it is so limited (the biggest
national club has about 700 members). Equipment is so much more reliable
that there are fewer engineers for so many more stations. The whole DX thing
is not understood by most station staffers. And, it is of no commercial
value. In an era where magazines report that an average business letter
costs over $50 bucks in time, overhead and such, who would want to respond.
It is fairly useless to the station.

I'll bet that the economics of an AM in Cedar Rapids are not too good unless
you are WMT.
>
> OK, I'm on a tangent (sorry)....but, AM DXing

Radio is different. There are no silent periods at most stations, formats
are hard to identify as som many are national and stations are just pressed
to do a lot more with fewer programming and technical persons. Don't blame
the stations... your hobby is simply dying.

1334. Dallas-Fort Worth Arbitrends

Newsgroup: rec.radio.broadcasting
Date: 2000-03-30 00:00:00 UTC
From: Tom Desmond <tdesmond@sprynet.com>
Message-ID: <38E42D00.CEEC6DF5@sprynet.com>
Source record: 20340

Phase II (Dec/Jan/Feb) Arbitrends are now online at <www.allaccess.com>
for Dallas-Fort Worth (and various other markets, of course).

Just a few observations (note that all comparison shares are from the
Fall book)...

The perennial local top two switch places, with KKDA-FM's urban format
moving to first place with a 6.5 and CHR KHKS dropping to second with a
6.3 (down from a 7.1).

In the country wars, although KPLX drops slightly, they still remain
ahead of KSCS...and the soon to be former "Young Country" KYNG remains
an also ran.

The move to a new rimshot frequency a couple months back appears not to
have hurt Christian Contemporary KLTY -- at least not yet. They're at a
3.3 (good for 9th place, and up from a 3.0 in the Fall book), even
though the latest ratings should include a few weeks at their new
frequency. Not surprisingly, the Spanish language station now in place
at 94.1 does not yet show up -- it will be interesting to see what
happens with them in the winter book.

And speaking of Spanish language stations, there is *one* surprise,
which is that the relatively weak Class C1 rimshot KTCY is actually
getting measureable ratings, with an even 1.0 share. This is good
enough to tie KZMP-AM/FM (also a Spanish language rimshot, although the
FM is a full Class C) in 29th place.

On the oldies front, the top dog is now ABC's rimshot KMEO "Memories
96.7", which is at a 2.8 (up from a 2.2), ahead of "Jamming oldies Magic
102" KTXQ's 2.3 (down from a 2.9) and traditional oldies KLUV's 2.2 (way
down from a 3.3). The latter is barely ahead of AC KBFB (which is being
sold to Radio One). I can't help but wonder if these results reflect
real changes in audience preferences or just a diary distribution that
favored the northern suburbs (where KMEO has a good signal).

1335. Club's and Hobbies

Newsgroup: rec.radio.broadcasting
Date: 2000-03-31 00:00:00 UTC
From: "Frederick R. Vobbe" <fredv@nrcdxas.org>
Message-ID: <3.0.3.32.20000331101024.006a0f5c@nrcdxas.org>
Source record: 20201

Since there seems to be an on-going thread about DXing, I thought I would mention that the National Radio Club has a web site at http://www.nrcdxas.org. The club deals with the issues of DXing the AM band. They have two publications, one in print and one on cassette. They also have listservs. There is also the IRCA (also AM DX), and the WTFDA for FM & TV DX.

Speaking of Ekko stamps (in Vol 2), I noticed on a sheet of Ekko stamps that there was one for WOAC in Lima OH. I've not been able to find any history on this station. Does anyone know what frequency WOAC-AM was on?

Fred (from the old transmitter site of WLOK-AM 1240), now WLIO-TV

> They're on the web.

I can't find my 1965- page but here's one for 1950-1997 at
http://www.spc.noaa.gov/archive/tornadoes/ustdbmy.html

An average over the whole period is 88 deaths annually from tornados.

1950-1997 AVERAGES ROUNDED TO NEAREST WHOLE INTEGER

Yearly Average Average Average tornadoes by month
Tornadoes Deaths Average deaths by month
JAN FEB MAR APR MAY JUN JUL AUG SEP OCT NOV DEC
787 15 20 52 104 171 161 94 58 38 27 29 17
88 2 6 13 26 18 11 1 2 2 2 3 3

which is once every 3.4 million years for any individual. Ice ages happen how often?

Ron Hardin(the head),
Your whole argument that people shoud not fear something as so "statistically" unlkely as a tornado is lame! You say there are other more likely dangers they should be concerned about based upon statistics. First of all I don't care WHERE you get your statistics from or how mathematically correct they are! They are worthless concerning this argument! I repeat, WORTHLESS!! What is a more immediate or pressing danger when a tornado is in your area?!? Maybe flying debris? Lightning?etc. etc.
And furthermore it is obvious that circumstances (like favorable tornado conditions) GREATLY alter and change statistical data or "the odds"! In other words sir, your math sucks! It is totally unreliable! (Even statistically!!)

Mike Neil
P.S. Read my other post on this board concerning "the odds". (I believe it's the other EAS thread.)

Message-ID: <2466-38E503D2-18@storefull-233.iap.bryant.webtv.net>
Source record: 20206

I never meant to imply that Ron and I are seeing eye to eye on
everything, but I do understand his point. Things happen all the time
that no one feels the need to warn us about that take way more lives
than weather emergencies. It's all about perspective. People only seem
to fear what you tell them to. Most people drive everyday without worry
and more people die that way than in any tornadoes. Even you have to
agree with that statistic! I'm not saying stations do or
don't play on the fears of others to get ratings. In my case, I do have
a fear about it, which is why I feel the need to write about it. They
are losing a listener by using it because I can never relax enough to
enjoy radio or TV because I dread seeing an EAS test.
I just feel that this whole idea of the EAS needs to be
reevaluated. If its purpose is truly to be able to have the president
have a way to communicate with us, then that's the ONLY thing it needs
to be used for!! As it is now, would anyone ever take it seriously if
the president did need to use it or would they think it's a joke?
Because I know very few realize that it is meant for that purpose.
Also, I know not to rely on the EAS to warn me of danger, but most
people DO NOT!! There needs to be a seperate system to be used
consistently for these lesser emergencies and a different one for large
scale emergencies.
I also agree that in my community, there is a severe problem in the
way the EAS is used. I can't find anyone to listen to my concerns
though.
I just appreciate it a lot that you listen to my views and answer.
It really helps.

Well, you can do it backwards. Suppose you're the only person on earth, and
you're wondering how dangerous tornados are to you as you go about your business.

You're 75 years old, let's say, so you'd estimate that the death odds are not much more
than 1/75 per year, a very reasonable mathematical estimate, since you're not
dead from any cause including tornados, and what other information is there if you're
the only inhabitant?

If you take this very reasonable guess, based on a lifetime of your own personal
experience, you have overestimated the danger of tornados by a factor of fifty thousand.

This is not uncommon in broadcast news, by the way.

This entire discussion kind of reminds me of the guy who sold aluminum foil hats at extremely high prices just before Skylab fell to Earth in the early 80's. His reasoning: The odds of the thing hitting any one person were astronomical, therefore, the odds of it hitting someone wearing an aluminum foil hat were even more so (on an exponentially increasing scale)!
If you look at the numbers, your sure to feel safe, but DON'T walk out in front of a speeding freight train because only so many people are killed or injured by being hit by freight trains on a given day. this could also be compared to a lifeguard refusing to dive in and save a drowning person because, statistically speaking, only 17 people drown on his section of the beach during any given summer and he just KNOWS this person won't drown because he's personally watched 19 people drown this year and he's already over his quota...

I'm wondering how long KCJJ is going to last. I enjoy the station a lot (it's been awhile since I've been able to reliably listen to an interference-free signal from a stand-alone CHR 500 miles away on AM!) and it's really a blast to hear live small-town news every hour, even at midnight. But one has to wonder how it competes with the CR FMs during the day, when people are actually buying spots.

> the stations... your hobby is simply dying.

Basically, it's different.

Heck, back in the 1920s there was some kind of agreeement that *all* the stations in Chicago would stay off the air for one night a week, to make life easier for the city's DXers. When a couple of stations decided they really needed to operate 7 days a week, (a handful of) DXers thought the world was ending. When the FCC began authorizing additional stations on the clear channels, it looked like the world was ending. When stations stopped signing off at midnight, it looked like the world was ending.

On the other hand, in the 1920s/1940s/1960s/1970s, nobody had a digitally-tuned receiver. Nobody had multipole crystal filters. Nobody had Internet access for near-instant knowledge of changes on the dial. There were still numerous AM stations in most important Canadian cities.

Yes, the days of stations going out of their way to accomodate DXers are essentially over. (at least until satellite and internet radio make over-the-air broadcasting obsolete and the whole thing becomes a hobby<grin>) But there's still plenty of interesting DX to be heard. Just be flexible.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

>left so many people in danger BECAUSE they expect a warning to tell them
>of a problem and didn't get one!!

You and Ron are on totally different pages here...

First of all, EAS alerts for local level emergencies is VOLUNTARY, not MANDATORY. EAS is strictly for the president to speak to us in times of a national crises. You can broadcast life-threatening emergencies, with or without EAS.

What Ron is saying is he believes stations that use EAS for weather bulletins, are doing so only for ratings.
Now I won't disagree that radio stations as a whole are looking for ratings. But I strongly disagree that EAS being used strictly for ratings. Stations which use EAS are providing a "valuable community service" to the listeners.

The other thing about Ron is his infamous "statistical" approach to the likelyhood of you or me being hit by something life threatening.

For example, he says there's little chance that your home or my home will be hit by a tornado. Tell that to the 150+ people in Arlington, Texas who's homes were destroyed by an F2 twister.

> So many things have happened (chemical
>leaks, etc) and you could look outside and see it looking hazy and smell
>in the air that something isn't right but people have said "Well, if it
>could hurt us, wouldn't we have been warned???"

In theory, yes. But again it may not always be through EAS. It may be news bulletins, text on the TV screen, civil defense emergency sirens, etc. I agree that people should not "rely" on EAS for everything. That's not what it's for. But when it is used, it can be a valuable asset.

> Because of this, people
>have ended up needing treatment for respiratory problems caused by
>chemical inhalation. This presents a huge problem. Until the EAS is
>more reliable, I feel they should inform people that they are on their
>own!!

Again it's not the reliability, it's the decision of when to use and when not to use. As I've already said, Don't expect EAS to be used for "everything".

If your community is using EAS and not doing it correctly, this suggests either a lack of knowledge on how to use it, or a break in the chain of command (or both).

At some point you will have to look at the sitation and decide for yourself whether to take cover or ignore what's going on. Sometimes getting "information" that will help you make that decision will be on TV and radio, and sometimes it won't.

What Ron has been saying all along is that when EAS "is" utilized to broadcast life threatenging emergencies, we should automatically ignore it because there's little statistical chance the emergency will affect us. He then gives us bogus and unproven mathmetical figures which he says support his claim.

We're not picking on Ron per say, we're just trying to show that his statisitical approach to saying we won't be affected by a life threatening emergency, is overly vague and foolish.

I don't see what's vague about it. They count tornado deaths, and they're
insignificant relative to the population.

Since everybody dies, something else is taking up the slack. That's the
thing to worry about.

The shortest form: the media claim to know what is important and what
is not. They do not know this and make no effort to find out.

They know what gives the best videos and the best ratings. This they
do make an effort to find out.

If I may propose a new goal for the hobby, instead of QSL's -

Get Real Encoder 5.0 from the Real Audio site (you have to hunt
for it but it's there and it's free), and put short audio clips of
your catches on your web page. AT&T Worldnet gives you 60 mb of
space free with a dialup account, enough for 15 hours of audio
at 8.5 kbs.

Example, my catches from two days on 1210 kHz last fall in Central Ohio:

http://home.att.net/~rhhardin1/radio1210wpht.ra WPHT 1210 Philadelphia PA (15k)
http://home.att.net/~rhhardin2/radio1210wsbi.ra WSBI 1210 Static TN (8k)
http://home.att.net/~rhhardin/radio1210wdgr.ra WDGR 1210 Dahlonega GA (23k)
http://home.att.net/~rhhardin2/radio1210kokk.ra KOKK 1210 Huron SD (55k)
http://home.att.net/~rhhardin4/radio1210.kgyn.ra KGYN 1210 Guymon OK (78k)
http://home.att.net/~rhhardin4/radio1210.wskr.ra WSKR 1210 Baton Rouge LA (42k)
http://home.att.net/~rhhardin3/radio1210wdao.ra WDAO 1210 Dayton OH (38k)

See if that isn't better than QSL's, and moreover of interest to others.

as far as televison in dallas ft worth is concerned, i was watching and
there is a system in place in the event of a major weather or news alert
which interrupts programming on ALL channels of the cable system
simultainously. This did occur when the national weather service issued
the tornado warning shortly before any tornado's touched down. the
citizens were given ample time to prepare and apparently did thus the
savings of loss of life. Fortunately the time factor played in as well
as the storm struck ft.worth around 6:15-6:30 pm. downtown buildings
are virtually emptied in ft.worth after 5pm and the few remaining in
them took shelter. had it been earlier it might not have been possible
for them all to do so that quickly and one look at those buildings and
you can correctly assumer loss of life/injuries would have been
substantial. the time also meant it was during evening newscast on the
four major tv stations, 4,5,8,& 11. they were wall to wall with weather
bulletins and warnings. on radio krld and wbap did an excellent job of
the same. the only exception to warnings of a significant nature still
are on most FM music stations. they typically will issue the initial
warning and then move back to music. few will remain live with updates
from the field, listeners, reporters, etc. kvil used to be excellent at
this but of course haven't concentrated any significant effort in news
in a couple of years contrary to their glory days when they would have
been all over it despite being a music station. no, music station
listeners do not want unwarranted interruptions for watches, etc...but
when you have a TORNADO WARNING with reports of a tornado ON THE GROUND
in your city.. you as a broadcaster must throw out all formatics and
rules and get the word out no matter the format. we cannot assume all
listeners will tune to the AM NEWS STATION of choice when an issue
occurs. another interesting note: ft.worth has no live/local radio
station broadcasting in the city anymore. wbap was the last remaining
before relocating to arlington. wouldn't someone do well to move back
to ft.worth and concentrate soley on ft. worth? yes, dallas AND
ft.worth are the bigger pot, but this is a clear sign that ft.worth
continues to be ignored for dallas and that the city needs a LOCAL
station reporting and broadcasting entirely for it and it alone.
couldn't one of these fm stations in the 2's ratings do better by doing
this? just a thought.
overall though, an excellent job by dfw media in this unfortunate
national disaster.
-my 2 cents-

What is vague, is YOUR set of numbers. You never claim where YOUR numbers come from. You only state what YOU believe the numbers should be.

Until you can cite chapter and verse on your numbers, we can't take any statistics you give us, seriously.

You claim, for example, that because only 4 people died in the DFW storms, is a result of your supposed odds that a tornado won't strike someone. I'm going to repeat a statement already made, that perhaps the low death count was actually a result of people LISTENING to the warnings and taking them seriously.

In reality, the death count decrease is due primarily to advanced technnological breakthroughs which have made it possible to issue warnings much faster. This gives people more time to react and take action.

I would buy your number game theory only if we didn't have this technology today, and yet only 4 people died.

>The shortest form: the media claim to know what is important and what

According to what proof? Ron, you really need to stop making false claims like this withoit doing your research first.

>They know what gives the best videos and the best ratings. This they
>do make an effort to find out.

See above...

We have discredited everything you have been saying, and yet you keep at it. What motivates you to do this? What are you trying to prove? Most people seem to be ignoring everything you say, at this point.

se steve5@airmail.net brought up some interesting points, especially about most of the music stations not providing continuous coverage.

I have to wonder if this was primarily due to the fact that miost of these stations are not as well prepared and well staffed for that. A lot of the music stations are at least partially automated or short staffed.

This recent tragedy should be a good learning lesson for all stations, regardless of format.

I got them from the official tornado death statistics, which seem to average
50 deaths or so a year, from 1965 or so on. I will find them again for you.
They're on the web.

1354. San Diego Radio News: The Mother of All Radio Deals

Newsgroup: rec.radio.broadcasting
Date: 2000-04-01 00:00:00 UTC
From: davidtan@cts.com
Message-ID: <38e688d4.1069562@nntp.cts.com>
Source record: 20210

In this issue:

The Mother of All Radio Deals
New Syndicated Radio Show to Launch
New Software-Driven Digital Radios Announced

The Mother of All Radio Deals

One Radio Company To Control/Program/Partner With Every San Diego Radio Station

And now...the answers you've all been waiting for.

First off, let's start with Californula Radio. They don't need to sell after all, not when this multi-billion dollar giant that begins with the letter "C" agrees to be a partner and helps program 90.3, 90.7, and 91.7 as Z-90 is made into hip-hop and 91.7 begins beaming back "KIIS 102.7" from Los Angeles. Californula's 97.7, 99.3, and 104.5 are taken over by HBC's marketers and take 99.3 Spanish to elimiate KSON's competetion.

Likewise for Salem, owner and programmer of KCBQ 1170 and KPRZ 1210 as radio giant "C" purchases a minority share in Salem in exchange for programming KCBQ's dayparts and allowing the 1170 transmitters to sit atop of KOGO 600's sticks.

Midwest Television divests its TV8 property to the "C" radio corporation while it gets "C" as a partner to co-program its 760 AM and 100.7 FM frequencies. Dr. Laura and Rush will appear on 760 when the San Diego Padres play in the daytime while "Mix" moves to 100.7; Star is dimmed permanently.

Jefferson-Pilot is spinning off 1240 to HBC, who will take it into a Spanish News/Talk format. Radio Disney moves to 94.9, bumping K-Best off the dial. Company "C" partners with J-P and comarkets 94.9, 97.3, and 98.1.

HBC also gets the 95.7 frequency to go along with its own 102.9 and 106.5 frequencies.

Company "C" also grabs a share of another company that begins with a "C": CBS/Infinity, and will co-program and market 96.5 into an all Best-FM 80's pop music format to eliminate competetion from KYXY 94.1; it will also take 103.7 into a 60's era psychadelic/flower power music format spanning the popular hits from 1964 through 1971.

So now you're thinking that Company "C" is Clear Channel. Right?

Wrong!

Compass?

No. They still are an independent company with its lone 102.1 from Oceanside.

Cumulus? Capstar? Chancellor? Citicasters? Chase?

No. No. No. No. No.

Then who is this triple-digit million dollar newcomer to the radio biz that's buying shares of almost all the stations in San Diego?

Correction...all the stations.

Clear Channel, programmer of 690, 91.1, and 92.5 from Tijuana, owner of 600, 640, 1360, 93.3, 94.1, 101.5, and 105.3,
and has a seat with Chase Radio Partners who owns 1130, has been swallowed up whole by radio company "C".

To summarize:

90.3, 90.7, 91.7: 100% Mexican Owned, 70% Califormula programmed, 30% Company "C" programmed
97.7, 99.3, 104.5: 100% Mexican Owned, 70% Califormula, 20% HBC programmed, 10% Company "C" programmed
1170, 1210: 70% Salem, 30% Company "C"
910: Family Radio
102.1: Compass Radio
1240: 70% HBC, 30% Company "C"
94.9, 97.3, 98.1: 70% Jefferson-Pilot, 30% Company "C"
TV8: 100% Company "C"
760, 100.7: 70% Midwest Television, 30% Company "C"
102.9, 106.5, 95.7: 70% HBC, 30% Company "C"
96.5, 103.7: 70% CBS/Infinity, 30% Company "C"
690, 91.1, 92.5: 100% Mexican Owned, 100% Company "C" programmed
600, 640, 1360, 93.3, 94.1, 101.5, 105.3: 100% Company "C"
1130: 70% Chase Radio Partners, 30% Company "C"

With cash assets and a stock market value of over $570 billion, a huge Internet prescence by being the largest maker of
equipment that powers the Internet and a worldwide networking platform for its own operating system, Cisco Systems Inc. is
partnering with another $570 billion corporation, junior partner Microsoft, to form an alliance called Corporation "C"...

Cisco Microsoft Radio Corporation

The CMRC instantly becomes a world radio powerhouse with over $1 trillion in assets and stock market value as it owns,
programs, and partners with every station in the nation and providing Internet services to them all.

Cisco Systems just announced the purchase of SightPath Inc, which makes software that manages and speeds the delivery of

web content for $800 in stock, a drop in their bucket!

New Syndicated Radio Show to Launch

One other sad news: The CEO will be Microsoft chief Bill Gates!

Every morning, Bill Gates will be hosting a morning show in every city where you live on stations placed strategically all over the nation so that your radio will always be able to listen to Mr. Gates whether it's on a clear channel AM, low-power local stick, or even in full fidelity FM! Now you have no excuse to miss Bill Gates' morning radio show because your radio couldn't get his signal.

KFI, KOGO, KBIG, and KYXY 94.1 will be among the local area stations to be airing the Bill Gates Morning Radio Program.

New Software-Driven Digital Radios Announced

And that's not all. Mr. Gates has really big plans for you that will make him so rich you'll be crying for Clear Channel to buy him back out!

Coming in 2002, you will be needing to purchase a new digital radio installed with Microsoft Windows 2003 costing approximately $5000 as Microsoft reengineers all the transmitters and Internet streams to better work with its operatng system installed in computers and radios.

As the transmitting techniques are improved, you'll be needing to update the software so often in order to receive the newer versions of the digital broadcast streams, and in annual cases, a complete upgrade of the Windows Radio Operating System for your radio, which itself might need to be either upgraded or replaced with a more advanced radio costing thousands more dollars right out of your pocket!

Failure to do so will result in your outdated radio software to not be able to receive the newer upgraded digital broadcasts or your antiquated digital radio to be unable to run the upgraded operating system at all.

By the year 2008, all analog radios will be rendered obsolete, unable to pick up the digital audio streams, so you'll have to pay about $20,000 in a ten-year span for 2-3 new digital radios with incremental versions of the Windows Radio Operating System installed, providing Microsoft, Cisco, and Bill Gates with a continuous stream of money from your pocketbooks directly to his bank account!

All transmitters will be digital, except that from Sets 102, which by then will be the only station your analog radio will be picking up for the rest of mankind.

And former Jacor CEO Randy Michaels will be seen on a street corner begging
for money while holding up a sign "Will
Program Radio For Food."

APRIL FOOL!

1355. Movies About Radio

Newsgroup: rec.radio.broadcasting
Date: 2000-04-01 00:00:00 UTC
From: JustRob885@aol.com
Message-ID: <43.2cc45f6.26179dda@aol.com>
Source record: 20211

I'm compiling a list of movies about radio. I'm focusing on films where the plot deals mainly with radio or about people in radio. I'm trying to only target films dealing with "real" radio (in other words, excluding pirate radio plots). I'm sure most of us have seen Stern's movie "Private Parts", but there are some others...

F.M. (1978)

Q-SKY is the #1 radio station in Los Angeles mainly because of the music they play, and running the station the way they want to. It has led them to a ratings success. The interesting radio personalities include: Jeff Dugan, rebellious head of the radio station; Mother, who is burned out from being a DJ; Eric Swan, a self centered romantic who wants more than just being a DJ; The Prince of Darkness, the hip night DJ; and Laura Coe, the easy-going type. The movie focuses on the battle between Jeff and his corporate bosses, who want more advertising and less music.

Talk Radio (1988)

An acerbic radio talk show host based in Dallas starts what could be an important few days when he discovers that his controversial late night show is about to be syndicated by a nationwide network of radio stations. However, all is not perfect for him, because on top of troubles with his love life and fears that the management of the network will try to alter the content of his show he has to cope with a neo-nazi group who have been angered by his forthright opinions. (Id I remember correctly, this on is based on a true story about a Denver, Colorado Talk Show Host)

Any others?

I am a semi-retired radio engineer interested in
acquisition of a first property. In this case a small
market AM. I seek interested investors, preferably
radio types.

The bid on the station is $100,000 cash. It is
fulltime, DA-2, 1000 days 500 nites. 3 tower. In
Maryland. I know of other low price AM down to $75,000
full price.

My tel is: (912)741-7695 in Macon, GA or email please
to wrecktech@yahoo.com

You don't want to deal with pirate radio, despite numerous FCC
mentions? I'm thinking of Christian Slaters' epic masterpiece "Pump Up
The Volume" which was based loosely (I believe) on the real-life saga of
Al Weiner.

Good Morning Vyetnam. Robin Williams plays Adrian Cronour a diskJocky on
the American forces Vyetnam network. Actually, after hearing Adrian
Cronour talk about the movie, Robin Williams played Robin Wiliams as a
diskjockdy at AFVN. I liked the movie. BTW, Robin williams is the only
one in the movie who got the call sign right. Every one else used the call
sign AFRS while Robin Williams used the call sign AFVN.

How about "Big Broadcast of 1937" and a few following years. More like
hyped-up network multi-star reviews.

Wasn't "War of the Worlds" about the broadcast and its effects?

Was that the one Steely Dan song "FM, no static at all"?
>
Slightly off topic: TV shows:

WKRP of course,

There was a show on for a season or so. "Lewis and Clark"? About a dual
DJ team by those names. Was on TV in the early 1960's.

Rock-it Radio listeners club - http://www.rockitradio.net

Hello Everyone,

Well show #154 is out there rockin and rollin right now on the
internet. It is mostly all Rockabilly of yesterday and today and a few
unknowns. To Tune in just go to our archives website at:
http://www.palmsradio.com/rockittext.htm
and click to show #154. Here is the playlist of the show.

1. A fool in paradise Narvel Felts 1957
2. A Rose and a baby ruth George Hamilton IV 1956
3. Need Your lovin' Ronnie Hawkins 1959
4. Rockabilly Boogie Johnny Burnette 1957
5. Crazy Crazy Lovin' Johnny Carroll 1957
6. Gonna back up baby Brigitte Handley 1998
7. Prisoner's song Sonny Burgess & Pacers 1956
8. Sweet Thing Bobby Green & the Sportsmen
9. Cracker jack Debbie Snowdove & Rockin eskimos 1999
10. Can't stop Loving you Jack Baymoore & Bandits 1999
11. Fools Hall of Fame Huelyn Duvall 1958
12. Fool Such as I Marti Brom 1999
13. Juevenile Delinquent Ronnie Allen 1958
14. My Life's Ambition Cattie Ness & Revenge 1999
15. Rock Boppin' Baby Collins Kids 1958
16. Butterfingers Johnny Burnette 1957
17. Ramble The Go Boys 1958
18. Foolish Thoughts Narvel Felts 1957

All our Rock-it Radio shows are available thru the internet and able
to be heard thru the G2 Real Audio player. If you don't have one
well you can download for free at http://www.real.com

~~~~~~

Contest! Contest! Contest! Contest! Contest! Contest! Contest! Contest

Congradulations to last week's Rock-it Radio listener club winner Dale
Sutter from Portland Maine, who won the Bourbonaires CD.

This week's CD we are giving away 5 Rock-it Radio T-Shirts Just be one of
the first 5 Rock-it Radio listeners club members to e mail us when you get
this newsletter and say " I want a Rock-it Radio T-Shirt"
This T-Shirt is of 100% cotton and features the Rock-it Radio logo of
a Rockin Cat on a spaceship...
~~~~~~

Our e mail address is: Rockitradio@earthlink.net

If you are not in the Rock-it radio listeners club well it's really
easy to join --- Just go to our main webpage at http://www.rockitradio.net
and at the top of the webpage type in your e mail address and click the
red listbot button and follow the e mail instructions ... it's
free and keeps you in the know of what's happening here at the Rock-it.

~~~~~~

Lots of Rockabilly stuff
Happening

Rock-it Radio is proud to be one of the many sponsors of the
Internet Rockabilly Hall of Fame and on April 5th they are going
to have 2 great CD's coming out -- Rockabilly Hall of Fame Vol. #3 &
#4. You can check it out at the Rockabilly Hall of fame site at:
http://www.rockabillyhall.com
Anything and everything Rockabilly is there and when you go there
tell'em Rock-it Radio sent yah :)

Also, Two major Rockabilly happenings are happening this month of
April --- Of course Viva Las Vegas 2000 from April 20th to 24th And
on April 14th thru 16th The premiere opening of the Rockabilly Hall of
Fame Museum in Jackson, Tenn.
Further information on these events can also be seen at the Rockabilly
Hall of Fame site -- http://www.rockabillyhall.com
also, don't forget to check out the Rock-it Radio website
http://www.palmsradio.com/rockabillylinks.html

~~~~~~

Rock-it Radio expansions

Within a couple of days Rock-it Radio will be having a Rock-it picture and
profile website of Rock-it Radio-- keep a eye out for
it! It will be listed under our links headings.

Also, Rock-it Radio will hopefully soon have some great rockin' pictures
and articles on the San Diego Rockabilly scene from
Rockafilly Melissa Arenz out from San Diego way.

And congradulations to Jammin' Jan who has been promoted to head
the Promotions/advertising department of Rock-it Radio.
Any questions on Rock-it Radio advertising you can reach her at
our phone # at: (805) 477-2502.
~~~~~~

Another Special note that we want our listeners to know is that
you should all check out Grindstone Magazine -- there upcoming issue
#10 is coming up and we received a copy of Grindstone this week --
This magazine is the maximum utmost -- Check out there website at:
http://www.grindstomemagazine.com
~~~~~~

Well that's about it for this week --- All the Rockin' best and
hope you enjoy our newly released Rockabilly show on Rock-it Radio.

All the best,

Bennie Dingo
Rock-it Radio

Woody Allen's Radio Days. It's been a while since I saw the flick, but I do
remeber that it's set in the pre-television era and radio is used as a metaphor
for the characters' lives. A pleasant little film.

We had RCS' "Master Control" program before our station was bought by AMFM, and we had to switch to the profit system. The RCS system had crashed on us a couple of times, but I think this might have something to do with the station owners trying to run four stations off a system built for two stations.... Profit works well, but I hate the whole "pause log" thing -- a minus chain was much simpler! (However, the RCS system would not allow you to make last minute changes, such as dump a song when the previous track was ending.)

>Wasn't "War of the Worlds" about the broadcast and its effects?

Actually this was a (surprisingly good) TV movie made in 1975 called "The Night that Panicked America", it had Tom Bosley, Will Geer, even Casey Kasem...tho the name of the guy who played Orson Welles escapes me - the only complaint I had is that the actors in the film (playing the actors on the radio) over-emoted the play's lines - the Mercury Theater played it absolutely straight, almost anti-acting, which made it so believable.

I actually knew someone who was on the original 1938 broadcast, the father of my college jazz professor, he was a busy trombonist in NYC in those days (NBC Symphony etc. under, er, Toscanini??) and he was also contracted to be in the studio orchestra for the Mercury Theater broadcasts - to him that night was just another gig...

A few Halloweens ago a local theater group in Akron staged a recreation of the broadcast, and my prof directed the live music for it, it went out over the local NPR stations in this area, from a theater in west Akron, so that had to have been a hoot - the actors did a pretty fair job too, but to be fair, it's a whole new ball o' wax radio-wise, and that style of acting sadly is no more (unless you consider these pseudo-reality shows like Law & Order, no contest in my book)

>Dreier won seven Emmys during his television career.

I was fortunate enough to get to hear, and talk to, Alex Drier before his recent passing. One of his favorite exercises at conventions, workshops, etc was to set up a modern day "sweet young supposed news broadcaster" (his words) on a prompter with a script, have him/her start reading, and then turn off the prompter and take away the script. Invariably, they would stop reading. Drier's comment was always that if you weren't able to tell the story without a script and prompter, you weren't competent to be on the air, and whoever hired you wasn't competent to run a newsroom. Needless to say, he was not a friend of most modern TV news directors.

His views, and expertise, will be missed.

1372. EAS: The Go-No Go Decision

Newsgroup: rec.radio.broadcasting
Date: 2000-04-02 00:00:00 UTC
From: HBPrice@aol.com
Message-ID: <63.3b41b26.2618d4ba@aol.com>
Source record: 20228

Greetings all:

First off, nice to have airwaves.com back.

Now, as for the ongoing discussion of EAS, weather and other emergencies, and how broadcasters make or delay the decision to "hit the button."

I work in a TV newsroom in New York City. I can't speak for all of you...but I'd be interested to know how many of you have actually seen lots of dead bodies piled up at disaster scenes. I have...hundreds of bodies scattered hither and yon. Not pleasant. And I've seen it more often than I'd care to remember.

The New York broadcast market comprises three states, about 30 counties and the nation's largest city which alone counts 7 million people+ in its citizenry. We get hurricanes here, lots of spot flooding, blizzards...and more tornadoes than most people here or elsewhere know about.

It can take a hour or more just to get across Manhattan by car or bus...lead time is a big consideration here.

Our house rule is: when NWS sends out a warning on ANY weather condition, it goes on the air IMMEDIATELY and as often as every 15 minutes until the warning window closes. We usually run it as a graphics crawl in the lower third of the screen...but if the warning concerns something truly imminent or particularly threatening -- like a tornado -- we put live talent on the air...and we stay on the air until the threat passes.

Now, to be honest, I missed the start of this thread...but subsequent postings leave me with the impression that some in this newsgroup feel the media behave like Chicken Little -- that we break programming to scare people (and "scare up" bigger ratings.")

Weather is news. And in places like Tornado Alley...it is BIG news. Scores of people die in tornados, die from injuries suffered from collateral damage done by tornados, and even when tornadoes strike "empty" buildings and they are the only casualties, the economic impact and social disruption is enormous.

This is legitimate news...and we cover it -- I said "cover" not "hype" -- because it is part of our mandate as FCC licensees -- you know, the fine print about the public interest, convenience and necessity?

For what it is worth, I am also an amateur radio operator, and a participant in the National Weather Service's voluntary SKYWARN weather spotter program. I've received many hours of formal training in things like tornado response -- and believe me, better safe than sorry applies here and in many other

cases of civil emergency.

A final note about the dangers of the sounds of silence. Just north of NYC is a nuke plant called Indian Point. There was a radiation leak there a few weeks ago. Small, no immediate danger posed. But no one knew that at the time. The plant's home county declared a radiological emergency. No one knew.

Why? Because all the local radio news operations had shut down for the night to go up on the bird. Phones were ringing in empty newsrooms. No one was scaring anybody. Then again, there was no one there to judge whether they needed to.

Friends, to me, this is the more fundamental worry as we ponder the future of who we are and what we do as broadcasters.

What ``scores of people'' die from tornados? Do you mean the official 88 a year
or do you mean others?

Is there some sort of dementia in news rooms about this?

Howard Price,
You obviously walk the talk! I echo your words LOUDLY concerning current priorities in the broadcast industry! I'm sorry, but in my opinion there truly is a looming danger on the horizon. The "empty studio" during a crisis is just as frightening a scenario as an approaching deadly storm system! It sadly enough is of OUR OWN making, not Mother Nature's! And tragically it'll take a disaster to change the situation. I have always admired true practitioners of preventive maintanence, no matter what the occupation. It has NOTHING, absolutely NOTHING to do with paranoia. It has EVERYTHING to do with common sense!

Well yes, but 88 is the figure that works out to your death once every 3.4 million years, hardly a danger compared to ice ages for example.

Or anything else. 100,000 people die on an average _day_ in the world.

The video is great from tornados, but basically it's only entertainment if you're into it.

"We're Not Married!" (1952)

The comedy was a series of vignettes comprised of couples that were married
by one minister....
who, as it turns out, was not properly licensed to perform weddings.

One of the couples were played by Fred Allen and Ginger Rogers. They played
(to the hilt, I might add)
a bickering couple who co hosted a network morning radio program. On air,
they were the epitome of
sugar and sweetness, declaring their love for one another, while reading
gratuitous advertisements for
everything from bedding to toothpaste. They find (to each others joy) that
their marriage is null and void,
however, they are under contract to perform On the Air as a married couple,
so the network president
sets out to find a preacher for these two 'lovebirds'.

While Allen's movie career was short-lived after radio, and Rogers was known
more for her association with that 'other' Fred, this segment should hit
close to home for anyone that has worked in Radio. Even though it was before
my time, you'll watch this and admit that you've known people like this and
have had to read ads like those. To me, their part of the film is one of the
funnier moments in Radio on Film..

In 1967, the 100th anniversary of the birth of Arturo Toscanini, RCA-Victor issued a five-LP set titled "A Toscanini Treasury of Historic Broadcasts" (LM-6711). The selections in that set came from NBC SO broadcasts between 1940 and 1949. The booklet with the album lists the personnel of the orchestra who participated in the recordings contained in the album. The trombonists are listed as follows:

John Clark
Neal DiBiase
Sam Lewis
Allen Ostrander
Abraham Pearlstein
Gardell Simmons
Melvin Wolfsont

Given that the date of the Mercury Theater broadcast was 1938 -- the NBC SO associated with Toscanini was created in 1937 -- I'm not sure whether any of the above-named persons is the one to whom you refer. In the LP album, one asterisk by a name indicates a charter member of the NBC SO, and a double asterisk indicates a charter member who remained with the orchestra from its creation to its disbandment in 1954. *None* of the persons named above has any asterisk beside the name.

Nonetheless, there remains the chance that one of them might have been the father of your father's professor. Hope this helps...

>I need a licence to make myself more 'marketable' though. Where and what kind of licences I need? I operate board in a small radio station and would like to move up from there.<

Having an FCC license does NOT make you more marketable. Don't even bother.

The Third-Class Radiotelephone Permit is no more.
The Restricted Radiotelephone Permit is worthless.
The General Class Radiotelephone License (which replaced the First Class and Second Class licenses) now carries a restrictive endorsement, PROHIBITING its use at broadcast stations.

NO license or permit is required to operate the boards OR the transmitter at any US broadcast station. Like I said: Don't even bother.

If you require "marketable" skills, learn engineering and computers. But you don't need an FCC license to practice either of those skills.

I think you folks are missing the point entirely.
The recent hurricanes and floods here in eastern NC are a good example. Every radio and TV station with any kind of news operation went to wall-to-wall coverage. The other radio stations that were still on the air were mostly rebroadcasting the TV station's news. At the TV station where I worked at, reporters and producers were literally colliding with each other as they ran from the newsroom to the tape room to the production room in a frantic effort to get their stuff on the air.
It's not about the listeners and/or viewers. The power was off in a large portion of the market. It was about GETTING SOMETHING ON THE AIR BEFORE THE OTHER STATIONS DID. They couldn't have cared less if anybody was actually watching. It was all about bragging rights between stations *after* the storm. "WE brought it to you FIRST!!" Every promo on every TV station since then has been about how they were FIRST on the air with the important warnings, FIRST with updates, and FIRST on the air with pictures of the water everywhere, even though 99% of their audience was very much aware of what was going on already and had better things to do (like saving their own skins) than sit around and watch TV.

EAS is a good idea with lousy implementation. But it really isn't the first and foremost thing in the minds of management.
Being FIRST is.

Howard, thanks for sounding the voice of sanity in this increasingly insane thread. Obviously
Mr. Hardin has never had a listener or viewer killed or maimed by a tornado. I have in my last
two markets (including Pittsburgh where tornadoes "never happen" statistically). Its not a great deal of fun. If you are human you drive home that night asking what you might have done
additionally that might have saved one more life.

I am hoping at this point that Mr. Hardin is not part of any news gathering organization, nor
has any plans to be. We simply can't afford to get this careless as a profession.

Ron, if you are sincere about this and aren't just blowing electronic smoke, then I would hope
that you practice what you preach in your daily life by not wearing your seat belts while driving, not reading the safety card prior to takeoff, and not seeing your doctor on a regular
basis. After all what the the chances??

To make yourself more "marketable" in the broadcast engineering world, you might consider the various levels of certification offered by the Society of Broadcast Engineers (SBE). They had a "Radio Operator" cert a couple years ago, but stopped that one when EAS took over EBS, and the test hadn't been updated with the new rules. They just came out with a new test for "TV Operator," so I imagine radio will be next.

For info on the other levels, starting with Broadcast Technologist, go to the national web site www.sbe.org where you'll find all kinds of info.

I believe you need only a 'Restricted Operator Permit' to operate any radio or TV station (the same permit a cab driver or police officer needs). All responsibility for correct operation resides in the licensee. I think they are available by mail; you need only be a US Citizen==Ted Shireman

That license is no longer offered by the FCC. If you send an application, it will be returned, with the fee payment still attached.

The only people who need an operator license are those operating international marine radios, who need a Marine Radiotelephone Operator Permit..

For more info, check out the FCC site www.fcc.gov

Turned on "Big570" KLIF the morning after the tornado hit Fort Worth, just in time to hear their new morning man, Joe Kelley, suggesting the following topic for callers to weigh in on:

"Should we blame the weather forecasters/National Weather Service/whatever for not doing a good enough job, so that we could have had better warning than we had about the tornado? And just how much to blame are they?"

Okay, I'm paraphrasing somewhat here. But honestly, folks, that was the gist of what he said.

Perhaps Kelley figured that, if the forecasters had spent a little more time gazing into their crystal balls, they'd have better predicted the advent, indeed, the exact trajectory and moment of touchdown, of the tornado, and more lives and property would have been saved. I'll never really know, since I switched to another radio station right away.

While we're at it, Joe, don't you think we should call God on the carpet as well? He had no call to spring a tornado on Fort Worth when no one was really expecting it. Say, just how much to blame *is* He, anyway?

Welcome! You make what I feel is an interesting point. How would we be informed of an emergency if there is no power??? Likely, when storms/disasters occur, power is lost. You also asked about the purpose of the EAS. I keep getting told that its sole purpose is for the president to use in case of national emergency. Of course, it gets used for everything in the world and then no one will pay attention when something finally IS a national disaster. I think if the EAS is supposed to be used by the president in that case then that is the ONLY way it should be used. We need a seperate warning system for all other emergencies. Only then will it be truly effective. Consideing your point that we can't use it if we can't see/hear it, I feel even more that these tests are just used to put fear and panic in us. In my area, they never use the attention signal during a 'real' emergency. They only use words at the top of the screen that say it's a message from the EAS. They never use any sound. If you were out of the room, you would have no idea what's going on. And not to sound rude to the person who often tells me it is not required to be used in those emergencies, but I feel if they bother to use it, they should do it right!! qqq2002, don't think I'm a bad person. I'm just emphatic about the total misuse of the EAS.

How many stations decided that the only way they could fool the listeners for a day was by using the old "Daylight Saving Time Started Early" trick? Somehow, I tend to ignore the times given out by the radio announcers, and in many cases when they are pre-recorded in a Prophet system, giving out the time is not possible.

There was one good one when a radio station faked a space shuttle landing on an airport that was reasonably too short to accomate a landing like that, and that was about four years ago.

How about your city? If there were any radio pranks in San Diego, I missed them all.

The FCC has done away with the Radio Telephone Operator license, which was the one DJ's / Board Ops had to have. Some C.E.'s might require you have one to show you understand how to operate the transmitter controls, but otherwise you don't need one.

Newbie asking! :)

I heard EAS TEST but never known how exactally it is used when 'emergency occures'. Does the message get on the air via the regular frequency? If so, what we need the EAS anyway? Just to make the noise so listeners would be 'alert'? Suppose there is power outage in all the radio stations in 'diaster areas', then how a message can be send thru the air?

I wouldn't expect WXYT to be carrying Imus for too much longer the way WXYT has been altering its schedule the past few months. Imus isn't that hot in the ratings here.

I can hear WXYT in Columbus OH in the day, and the other hosts seem to work every angle of a every uninteresting question to death.

Jimmy Barrett is on at night so I can't hear him over the thousand competing 1270 stations, but he was pretty good on WJR in the old days.

Imus is a definite bright spot. I imagine WXYT has to sell the audience not the ratings though. WTEM sells F-16 ads on Imus and does okay.

WXYT seems to have a lot of .com ads, which is probably a pretty good match. Somebody knows what they're selling. If I were carrying Imus I'd find out what spots WFAN sells and try the same companies or their local equivalents, using the WFAN success as the arguing point.

The job of a PD is to put on something good and figure out how to sell it, not copy the hottest and most uninteresting format, sort of an anti-syndication school of thought with a syndicated program.

Or you could take up a collection among the Imus listeners and probably pay for the program, as long as he doesn't talk about the Ranch.

Detroit has a sports station WDFN, which has a streaming presence on the internet. Jimmy Barrett gave up his Detroit Tiger's PA announcer job to keep his radio night spot. Mark Scott indicates that his 10-noon slot will end at the end of the month, since his contact talks are going nowhere. Fianally, CBS in Detroit also owns an all-news station, plus 2 or 3 FMs.

You don't understand, Ron, do you?

For the record, a tornado hit a home about 5 blocks from me when I was growing up in the 1970's in Northeast Ohio. (Akron, to be specific the suburb of Cuyahoga Falls.) I can see the destruction the twister, which was actually a fairly small one as tornadoes go, did to the top half of the home. It was nothing compared to what the folks in Ft. Worth, TX saw a while back, but it was devastation.

I was very thankful that the local broadcast outlets sent an EBS warning, which gave us the opportunity to do whatever we felt was necessary to keep safe.

Now, if it interrupts your beloved "Imus in the Morning" show, I'm sorry. But I can't sit here and watch your little "only a handful of people die" routine and not comment on it. I'd much rather have a thoughtful discussion of EBS/EAS issues, what it takes to get the system working, etc., than read the umpteenth message about how you have to twist your antenna to the side and backwards because some small town station on 1210 AM is broadcasting at high power, blocking your route to the king of radio, Don Imus.

Mike, speaking only for himself

Let's see, five blocks is an area 10 x 10 blocks in size, with
100 block-long steets having what? 10 houses to each side, say. So
20 x 100 = 2000 houses within that experience's area.

This was 25 years ago, so that's 50,000 house-years you have to
reach back in personal experience to find a home destroyed.

About one tornado in a hundred has a fatality, so you'd expect to
die in your house at that rate once every 5,000,000 years, which
is roughly the 3.4 million years personal fatality rate we expect
from 88 annual tornado deaths in a 300 million population.

So your experience exactly _supports_ the safety of tornados relative to
everything else in life.

It does show at work exactly the news anxiety gimmick, that you
reach out for the rare case in a huge population and present it
as typical. Tornado safety, things you need to know, tune in at five.

King of ego-tweaking, a specialized entertainment but one that thrives
on the delusions of the broadcast industry.

There has, regrettably, been a Great Imus Softening due to ratings-fear,
eg. he was one of the last to pile on Princess Di and JFK Jr news
coverage, so you can no longer count on him in all areas after a
weekend of being pummelled by inane wall-to-wall crisis coverage.

John & Ken on KABC seem to have taken over that particular mantle
from Imus, though Imus still is the best at stirring up trouble
where only a settled status hierarchy can be seen.

Rob,

They aren't being issued anymore. I tried replacing mine two summers ago after the original was
stolen and had my application returned with the check. The letter attached explained that the only
reason I would need one is if I piloted my private aircraft outside of US airspace.

Ron;

Did it ever dawn on you that the incidence of people being killed by tornadoes is so low BECAUSE we
warn people about them?

Go back through the NWS statistics for severe storms through the entire century. Notice something?
From about 1966 on the numbers of fatalities drop significantly. Gee, wonder why that is? Better
forecasting? Better warning? Dumb luck?

Given the choice between warned about the slight risk of being killed by something and being able to
take action and not being warned and therefore doing nothing, I'LL TAKE THE FORMER EVERY TIME!
Silly me, I guess I just like living a little too much right now.

1417. Whereabouts of Pat Townsend: Solved?

Newsgroup: rec.radio.broadcasting
Date: 2000-04-04 00:00:00 UTC
From: JGREY <JGREY@MADE2MANAGE.com>
Message-ID: <726EC7188215D3119B400090275112AD015D26EA@EXCHANGE>
Source record: 20173

I found this on the Net today -- a press release from yesterday that quotes Pat Townsend.

Company Press Release

SOURCE: ICB Toll Free News

ICB Toll Free & TELECOM Digest Forge Alliance

'The Addition of ICB's daily HeadsUp Headlines, with its Unique Spotlight on Toll Free 800 and Domain Name Issues, Puts Critical Content on the Front Burner for Digest Readers'

NEW YORK, April 4 /PRNewswire/ -- ICB Toll Free, premier source of toll free 800 and dot com industry intelligence, analysis and news, today announced an alliance with TELECOM Digest, the oldest continuing e-journal about telecommunications on the Internet.

ICB partially replaces the International Telecommunications Union (ITU) as primary Digest underwriter, and will distribute its daily HeadsUp Headlines to the Digest's 2,500+ email subscribers and 8,000+ daily web site visitors, as well as Usenet comp.dcom.telecom.

``We are honored to be a key sponsor of TELECOM Digest, the granddaddy of telecom journals on the Internet,'' says Judith Oppenheimer, President and Publisher of ICB. ``Throughout its almost twenty year history on the net it has maintained the highest standards of editorial integrity, thanks to Editor Pat Townson, who moderates with wisdom, discretion, and good humor. TELECOM Digest remains to this day, a key news and analysis resource for industry leaders and watchers alike, worldwide.''

Patrick Townson, Digest Editor notes, ``ICB's Judith Oppenheimer is a frequent and valued contributor to TELECOM Digest. The addition of ICB's daily HeadsUp Headlines, with its unique spotlight on toll free 800 and domain name issues, puts critical content on the front burner for Digest readers. It's a win-win relationship, and we're very pleased to have ICB on board.''

ABOUT ICB

ICB Toll Free News (http://icbtollfree.com), premier source of 800 and dot com industry news, is owned by ICB Inc., a consulting practice (http://1800TheExpert.com) founded in 1993 and publisher of the WhoSells800.com Toll Free Service Provider Directory (http://whosells800.com). ICB is an industry leader in toll free and domain name intelligence, advising business owners, corporate marketers and the telecom industries since 1993.

ABOUT TELECOM DIGEST

TELECOM Digest is an electronic journal devoted mostly but not exclusively to telecommunications topics. It is circulated anywhere there is email, plus various telecom forums on networks such as Compuserve and America On Line, and other forums. It is also gatewayed to Usenet where it appears as the moderated newsgroup 'comp.dcom.telecom.' The Digest is the oldest continuing e-journal about telecommunications on the Internet, having

been founded in August, 1981 and published continuously since then, and is possibly the second oldest e-zine on the Internet in any category. Archives are available for review and research at http://telecom-digest.org.

Pat's whereabouts are no secret -- he nearly died from cranial bleeding
and now he's recuperating at his mother's house in Kansas. It's all he
can do to run the Telecom Digest, which is why he handed rrb to me for
safekeeping and I've put it on robomoderation.

I managed to find someone at Bill's old ISP who transferred the
airwaves.com domain to me. I'll give it to Pat when I can figure out
how to get the attention of the gerbils who run Network Solutions.

Pat and I have been making a few tweaks to the web site, with luck
we'll have volunteers to update it more extensively in the future.

The Restricted Radiotelephone Operators permit was the only paper needed to operate a board, until the FCC ruled that it was no longer required a couple of years ago. It was to allow you to legally take transmitter readings and sign off on the transmitter log. It is no longer required, but some stations still want you to have one to cover their butts. If you screw up on the job, they can point to the fact that you have a license that, in the application, states you know the rules.

Unless the person who said the license is no longer issued is correct (I think it is still issued), you can request an application form from the FCC websie or on their automated telephone form request line. You can find the correct form number (which you will need to know) on the FCC website.

There is no test associated with the application. Just attach you check for $45 (I think that is the fee), fill out the form and mail it. There is a detachable section that you don't mail that acts as a temporary license until your permanent license is issued. The temporary license is valid at the moment you plce the application in a mailbox. The license is good for life.

Do you need it? No. If your station requires it, you can apply for it. Will it help you get a job? That depends on if the station requires it to be hired. What gets you a job is how well you can perform the duties associated with that job.

Good luck.

1427. EAS: When Logic Takes Leave

Newsgroup: rec.radio.broadcasting
Date: 2000-04-04 00:00:00 UTC
From: HBPrice@aol.com
Message-ID: <1a.1be10bb.261bcfd8@aol.com>
Source record: 20183

Friends & Colleagues:

I, for one, believe it is time to put a capper on the current EAS thread.

The discussion heretofore has been dominated by participants who, in essence, believe that all the media does is scare people for ratings, covers only stories rich in good pictures, covers those stories BECAUSE they are rich in good pictures, takes the personal tragedies of a few people and needlessly (and senselessly) imposes them on the masses, and is the tale wagging the public policy dog rather than the other way around.

As I have said in private posts -- and will now say here -- in all hyperbole there are kernels of truth. And though I loathe cliches, the one about tossing the baby out with the bath water applies here.

I -- and I'm sure most of you who work in this trade (as opposed to the industry spectators and wannabees who also lurk 'round these parts) -- come in to work each days with lofty goals and good intentions and a determination to serve the public interest.

Contrary to those who'd hopelessly like to believe otherwise, we labor in a business. We cover the news using resources paid for by donors (in the case of public broadcasting) or sponsors (in the case of commercial broadcasting) -- in return for the eyeballs and earlobes we put in front of the product they are helping to support. This is the reality of the American system -- and what you get when you decide you don't want a government all too willing to pay for it all telling you what to see, do and think.

We've already conceded the point in this space that cataclysm brings in viewers, readers and listeners. More a function of human nature, I maintain, that a conspiracy on our part to make money from your misfortune.

The alternative to watching or listening to something that neither interests nor affects you is to a) change the channel or b) shut the damn box off.

The illogical third choice is to simply criticize everything and wish for a media environment in which stuff that doesn't interest us never reaches our TV or radio and these outlets focus instead on endless philosophic discussions of "societal issues" -- whatever they are. The point being that philosophy and policy are somehow by definition more substantive than the news of the day.

If this is what people wanted, then PBS would be the number one network in the free world. It isn't. Which is not to say PBS and outlets like it are not important and should not exist. They have their important place. Likewise, so do we in the rest of the media.

I hold an advanced degree and like learning a little bit about everything. But at the end of the day, I like to know what went on down at the school board, if my favorite stores will rebuild after the fire that wrecked their strip mall, how the local ballteams did and, yes, whether that line of severe weather heading our way is likely to be something I MAY have to worry about.

One can do both, you see -- be an informed AND an enlightened citizen. The best among us offer this mix nightly. The rest of us should aspire to offer it.

Two final points. To the contributor angry at his employer for telling his or her viewers that his/her station was first with this, or first with that -- this is called proof-of-performance. It is a time-honored way for enterprises of ALL types to remind their users of their distinctive competencies. Contrary to my colleague's perception -- I don't believe the first thought of news executives staring down the gullet of a Cat 5 hurricane is how fast they can run "We-had-this-first spots." I'm a FEMA-certified disaster manager intimately involved with disaster response at my station -- and our first concern is getting the right information into the right hands as quickly as we can. If we do that, our proof, if you will, is in the pudding.

And as for the inane assertion that when a market is largely without power, broadcasting should cease since "no one can see or hear us," someone can always see and hear you. Many homes today have generators, particularly in storm-prone areas -- radios and TVs alike run on batteries these days. People have inverters to run appliances from car cigarette lighters and gelcells. And since a lot of stations stream on the Web, if you have a laptop, you can be seen. Oh, and by the way, the FCC authorizes stations which normally are off the air after certain hours to sign on at full power to provide emergency information to their communities in times of crisis. Just in case you didn't know.

A parting observation -- a lot of these posts sound like they come from would-be talk show hosts. Be there, done that, too. So here's a clue -- what distinguishes the best from the rest is that they know when to stop talking...and start listening.

Enough.

Is Phil supposed to be talk show parody? After listening to a few shows over the past few weeks, I think I've figured out the whole thrust of the show? Maybe not.

1431. Radio War In Cincinnati

Newsgroup: rec.radio.broadcasting
Date: 2000-04-04 00:00:00 UTC
From: BruBz@webtv.net
Message-ID: <25017-38EA95F9-44@storefull-617.iap.bryant.webtv.net>
Source record: 20187

It looks like Infinity and Clear Channel are ready
to lock horns in what could be a hot summer
in Cincinnati radio. After CCs WKFS 107.1
(Kiss 107) over took long time Top 40 champ
Infinity's WKRQ (Q 102) in the last quarter.
Infinity will now target CC's WEBN for the
18-34 Males.The former WYLX just changed
to WAQZ 97.3 (Z-Rock). To add insult to
injury the WAQZ calls were used by Clear
Channel in this market for a Alt rocker two
years ago.Word is that Infinity will pull out
all the stops to promo the Z.
Won't be easy though.WEBN is a near legend
in this market.Been AOR since 1967.
Still there's a chance,like most of the CC stations in this (The home of
the former Jacor)
market,WEBN has gotten fat and lazy.Way to
many spots to much gab and that Jacor
"I'm so cool" arrogance just oozes from the radio. Should be
interesting.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

>Any others?
>
>Rob Amdrews >>

A couple of "far-from-four-star" radio movies:

-----"Airheads" (which airs from time to time on Comedy Central) starring Brendan Fraser, Steve Buscemi and Adam Sandler as a struggling rock band which takes a radio station hostage to get its song played. The station's staff eventually side with the band when they find out the station manager is planning to dump the rock format (and the staff along with it).
-----"Zoo Radio" is about the battle between two Los Angeles radio stations: the "underdog" station K-Lost and #1 station K-Win. K-Lost is losing sponsors (one due to the blind stuttering DJ who mangles the name "Mrs. Bee-bee's Better Bon-bons") and switches to a more edgy format to draw listeners from K-Win, which naturally has a few tricks up its own sleeve to stop K-Lost.

They'd be incredibly stupid if they did. The station is well-liked,
and at the top of the ratings in Akron and Northeast Ohio, with a really
good demographic.

> Then Ron Hardin wrote:
> The theory is better building construction codes.

That's a flawed theory (if not outright false)... I realize that better building codes does save lives in respect to hurricanes, but there is nothing to suggest that it is also true of tornadoes.
Some of the major tornado events of the 90s (Jarrell, TX; Moore, OK; and Andover, KS just to name a few) clearly indicated that the only way to survive (with the exception of a handful of "God's miracles") was to be below ground.
In all of these cases a strong tornado destroyed almost everything in it's path... no buildings in the direct path of these storms survived intact. In fact, pavement was stripped from the ground and several inches of topsoil was scoured from the ground.
I doubt if any building code could be enacted to withstand winds in excess of 150 mpg. In the case of the Moore OK storm, (Oklahoma city suburb): The storm was tracked for 40 minutes prior and almost all local media carried live, continuous coverage. It has been said many times that the people tracking this storm and the Ok City media are responsible for saving hundreds of lives with their coverage.
If you watch the news after a tornado (with F3 damage or higher) strikes an inhabited area, you will find that the damage is usually incredible. The reason more people survive is advance warning provided by better-trained spotters, chasers, better resources available to the NWS and better coverage given by (some of) the broadcast media.

The average person lives in a better house.

Fewer, in the extreme example, in trailers.

A regular house may collapse but there's all sorts of open spaces
left inside, and the rest of the rubble serves as a shield. Even if
it collapses on you, it does so at a low speed. Hence fewer deaths.

Not that the deaths are a significant number in the first place.
This is just about the theory that warnings are responsible.

The house that collapsed around us, in a tornado (1994) did so by lifting UP, off of the floorings and flying away. Parts of the walls, roofing materials and personal belongings were found over a mile away. (And, although it SEEMED to happen in slow motion, the actual amount of time involved was just under 15 seconds... Also, we were left with a flat floor area and parts of two rooms... on the opposite end of the house.)

I don't know if I'd draw that conclusion based on
these figures. Sales is a relatively large expense
in many businesses, and I don't see why media
should be or ever has been an exception.

I don't necessarily dispute your claim, but I don't
think you can get there from the numbers. One
talented creative person in the right place can have
a big impact on the product, but a similarly talented
sales rep is going to have proportionally less impact
on the bottom line.

This is why nobody advises strapping yourself to the wall or anything else
that serves as a wing in high winds. A trailer is a wing with you fastened
loosely inside. A house is not.

In all honesty, I don't think any amount of structural integrity would've withstood the tornado. I really believe the only safe place to be is underground (5 feet or more just as an added measure). These things are IMPRESSIVE! (And this is coming from a person who usually volunteers to help the news departments full coverage of hurricanes! There just is no comparison... A tornado actually can be compared to a "mini-atomic blast".)

You're still more likely to die in traffic that day, even with a
tornado in your city.

Good video sure.

Somebody compared tornados to a mini atomic blast, a reference
to the video gratification it provides. Pieces flying
everywhere, like model airplanes boys used to fly with firecrackers
in them, a similar interest.

> fastened
> > loosely inside. A house is not.

A Tornado is completely unpredictable, as is the damage it will create.
It'spossible for brick homes surrounding a light tin utility structure to be
leveled while the utility building will suffer only minimal damage. We're
talking about winds that can lift and twist a frieght train and leave a
picket fence just yards away fully intact. I'm not going to strap myself to
any house.

The Moore, OKC, tornado a year ago was tracked and chased by the National
Severe Storms Predicition Center, located in Norman, Oklahoma, a suburb of
OKC. Using mobile Doppler Radar the wind speeds were found to be in excess
of those expected in a F5 Tornado, leaving many meteorologists in the area
speculating
as to whether there would be a new F6 designation. These winds were the
highest wind speeds ever recorded in the U.S.

> In all honesty, I don't think any amount of structural integrity
would've
> withstood the tornado. I really believe the only safe place to be is
> underground (5 feet or more just as an added measure).

We call them "Fraidy holes", they've saved thousands of lives. When you live
in this area you learn that there is no such thing as a minor Tornado.

> These things are
IMPRESSIVE! (And this is coming from a person who usually volunteers to help
> the news departments full coverage of hurricanes! There just is no
> comparison... A tornado actually can be compared to a "mini-atomic
blast".)

Believe it or not...In the OKC, Moore, Tornado there was some Radio Stations
in the area that dared not break format, did the 10 in a row thing and
pretty much ignored the Tornado reports, until reports of the mass damage
came in.

What in the world is a "house-year"? It's a contrived term Ron
Hardin came up with to back his views.

>About one tornado in a hundred has a fatality, so you'd expect to
>die in your house at that rate once every 5,000,000 years, which
>is roughly the 3.4 million years personal fatality rate we expect
>from 88 annual tornado deaths in a 300 million population.
>
>So your experience exactly _supports_ the safety of tornados relative to
>everything else in life.

You can throw out all the statistics you like. But when there is a
devastating twister winding its way through my neighborhood, I am DAMN
GLAD that the local EAS station in my area interrupts programming,
bleeps and blurps and warns me about it. (But unlike when I was a
child in Ohio, the weather folks are now more specific about the
danger zones. I see the wires...they can pretty much pinpoint it to a
specific road if there is a menacing cell or what looks like a tornado
on radar.)

<sarcasm>
Good. That should make Ron Hardin happy. Screw everyone else, they're not
important.

I only made the point because your only other contribution to this
forum, aside from your recent bleating about EAS, has been the
incessant "why can't I hear Imus because station A in small town B is
running at high power at 6:30 AM?". Gawd, if you love the man that
much, move to New York City...I hear he's on a full-power station
there! :)

Thanks for the correction. That was my misspelling, not that of the
editor of the RCA-Victor booklet.

Uhhh... just a guess here... but those of us who like Tyra Banks do so not because of what she has to say or how she says it; nor do we like her for her acting talent.

In case you overlooked it, she's pretty easy on the eyes.
